GOLDMAN SACHS STRATEGIC FACTOR ALLOCATION FUND

Class P: GSQPX

Before you invest, you may want to review the Goldman Sachs Strategic Factor Allocation Fund (the "Fund") Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, reports to shareholders and other information about the Fund online at dfinview.com/GoldmanSachs. You can also get this information at no cost by calling 800-621-2550 or by sending an e-mail request to gs-funds-document-requests@gs.com. The Fund's Prospectus and Statement of Additional Information ("SAI"), both dated December 29, 2024, are incorporated by reference into this Summary Prospectus.

INVESTMENT OBJECTIVE

The Goldman Sachs Strategic Factor Allocation Fund (the "Fund") seeks long-term total return.

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

	Class P
Management Fees	0.74%
Other Expenses ¹	0.06%
Acquired (Underlying) Fund Fees and Expenses	0.18%
Total Annual Fund Operating Expenses²	0.98%
Fee Waiver ³	(0.17)%
Total Annual Fund Operating Expenses After Fee Waiver	0.81%

¹ The "Other Expenses" have been estimated to reflect expenses expected to be incurred during the current fiscal year.

² The "Total Annual Fund Operating Expenses" and "Total Annual Fund Operating Expenses After Fee Waiver" do not correlate to the ratios of net and total expenses to average net assets provided in the Financial Highlights, which reflect the operating expenses of the Fund and do not include "Acquired (Underlying) Fund Fees and Expenses."

³ The Investment Adviser has agreed to (i) waive a portion of its management fee payable by the Fund in an amount equal to any management fees it earns as an investment adviser to any of the affiliated funds in which the Fund invests, except those management fees it earns from the Fund's investments of cash collateral received in connection with securities lending transactions in affiliated funds; and (ii) waive a portion of its management fee in an amount equal to the management fee paid to the Investment Adviser by the SFA Subsidiary (as defined below) at an annual rate of 0.42% of the SFA Subsidiary's average daily net assets. The management fee waiver arrangement with respect to the SFA Subsidiary may not be discontinued by the Investment Adviser as long as its contract with the SFA Subsidiary is in place. The other management fee waiver arrangement will remain in effect through at least December 29, 2025, and prior to such date the Investment Adviser may not terminate this arrangement without the approval of the Board of Trustees.

EXPENSE EXAMPLE

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in Class P Shares of the Fund for the time periods indicated and then redeem all of your Class P Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund operating expenses remain the same (except that the Example incorporates any applicable fee

waiver and/or expense limitation arrangements for only the first year). Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class P Shares	\$83	\$295	\$525	\$1,186

PORTFOLIO TURNOVER

The Fund pays transaction costs when it buys and sells securities or instruments (*i.e.*, “turns over” its portfolio). A high rate of portfolio turnover may result in increased transaction costs, including brokerage commissions, which must be borne by the Fund and its shareholders, and is also likely to result in higher short-term capital gains for taxable shareholders. These costs are not reflected in the annual fund operating expenses or in the expense example above, but are reflected in the Fund’s performance. The Fund’s portfolio turnover rate for the fiscal year ended August 31, 2024 was 0% of the average value of its portfolio. However, the Fund’s portfolio turnover rate is calculated without regard to transactions involving certain short-term instruments or derivatives. If such transactions were included in the calculation, the Fund would have a higher portfolio turnover rate.

PRINCIPAL STRATEGY

The Fund seeks to achieve its investment objective through the implementation of the proprietary Strategic Factor Allocation process (“Strategic Allocation”) of the Goldman Sachs Investment Strategy Group (“Investment Strategy Group”). The Strategic Allocation is generally derived from the Investment Strategy Group’s market views on a variety of asset classes and instruments. The Investment Adviser determines in its sole discretion how to implement the Strategic Allocation.

The Strategic Allocation was developed to provide exposure to “factors,” which are academically derived drivers of investment returns that the Investment Adviser believes offer the potential for greater and more consistent returns in different market environments. These factors include, but are not limited to, equity, term, flow and volatility. Under normal circumstances, the Fund will invest in a variety of asset classes, including, but not limited to, equity, fixed income and foreign exchange contracts.

The Investment Adviser implements the Strategic Allocation by investing in derivatives and pooled investment vehicles, including, but not limited to, investment companies, including exchange-traded funds (“ETFs”) (the “Underlying Funds”), and exchange-traded notes (“ETNs”). The Underlying Funds may include affiliated investment companies. Strategic Allocation may also be implemented by investing in any one or a combination of the following asset classes: (i) U.S. and foreign equity securities, including common and preferred stocks; (ii) fixed income instruments, which include, among others, debt issued by governments (including the U.S. and foreign governments), their agencies, instrumentalities, sponsored entities, and political subdivisions, notes, debt participations and non-investment grade securities (commonly known as “junk bonds”); and (iii) foreign exchange contracts.

The Fund seeks to generate income by selling call and put options on various reference securities including equity market indices, U.S. Treasury futures, or futures contracts based on the Secured Overnight Financing Rate (“SOFR”). To limit the downside risk of these written options, the Fund may utilize long options on instruments corresponding to the instruments underlying the written options as well as take positions in these instruments directly or by acquiring other closely related securities such as futures on these instruments. These positions are intended to reduce the impacts on the Fund if the underlying instrument approaches or falls past the strike price of a written put option or if it increases past the strike price of a written call

option. The Fund will generally realize gains to the extent the income from collected premiums exceeds the aggregate appreciation or depreciation of the reference security over the exercise price of an option.

As the seller of options, the Fund will receive cash (the “premium”) from the purchaser. If the purchaser exercises an option, the Fund pays the purchaser the difference between the strike price of the option and the price of the underlier at the time of exercise in the case of a put option or the difference between the price of the underlier at the time of exercise and the strike price of the option in the case of a call option. The premium, the exercise price and the market price of the underlier determine the gain or loss realized by the Fund as the seller of options. As the buyer of options, the Fund will pay the “premium” to the seller. If the Fund exercises a put option, the seller will pay the Fund the difference between the strike price of the option and the price of the underlier at the time of exercise. If the Fund exercises a call option, the seller will pay the Fund the difference between the price of the underlier at the time of exercise and the strike price of the option. The premium, the exercise price and the market price of the underlier determine the gain or loss realized by the Fund as the buyer of options.

The Fund may invest without restriction as to issuer capitalization, country, currency, maturity, duration or credit rating.

The Fund may invest in derivatives for both hedging and non-hedging purposes. Derivative positions may be listed or over the counter (“OTC”) and may or may not be centrally cleared. The Fund’s derivative investments may include but are not limited to: (i) futures contracts, including futures based on equity or fixed income securities and/or equity or fixed income indices, interest rate futures, currency futures and swap futures; (ii) swaps, including equity, currency, interest rate, total return, variance and credit default swaps, and swaps on futures contracts; (iii) options, including long and short positions in call options and put options on indices, individual securities or currencies, swaptions and options on futures contracts; (iv) forward contracts, including forwards based on equity or fixed income securities and/or equity or fixed income indices, currency forwards, interest rate forwards, swap forwards and non-deliverable forwards; (v) volatility index derivatives and commodity-linked derivative instruments; and (vi) other instruments, including structured securities. The Fund may implement short positions for hedging purposes or to seek to enhance total return, and may do so by using swaps, futures, forwards or options, or through short sales of any instrument that the Fund may purchase for investment. As a result of the Fund’s use of derivatives, the Fund may also hold significant amounts of U.S. Treasuries or short-term investments, including money market funds, repurchase agreements, cash and time deposits.

The Fund seeks to gain exposure to volatility index derivatives and commodity-linked derivative instruments primarily by investing in a wholly-owned subsidiary of the Fund, organized as a limited liability company under the laws of the Cayman Islands, Cayman Commodity—SFA, LLC (the “SFA Subsidiary”). The SFA Subsidiary is advised by the Investment Adviser.

Investment in the Subsidiary. The Fund may invest up to 25% of its total assets in the SFA Subsidiary. The SFA Subsidiary primarily obtains its volatility index derivatives exposure by investing in options, futures, forwards, swaps, options on futures and swaps, structured securities and other derivatives and similar instruments that provide exposure to volatility indices. The Fund may also obtain exposure to commodities through investments by the SFA Subsidiary in commodity-linked derivative instruments (including, but not limited to, total return swaps (on commodity indices, sub-indices, and single commodities),

commodity (U.S. or foreign) futures, commodity options and commodity-linked swaps). Neither the Fund nor the SFA Subsidiary invests directly in physical commodities.

The SFA Subsidiary may also invest in bonds or other instruments, including fixed income securities, either as investments or to serve as margin or collateral for its swap positions, as well as foreign currency transactions (including forward contracts).

The Investment Adviser measures the Fund's performance against the Strategic Factor Allocation Composite Index, which is comprised of the S&P 500[®] Index (50%) and the Bloomberg U.S. Aggregate Bond Index (50%).

PRINCIPAL RISKS OF THE FUND

Loss of money is a risk of investing in the Fund. The investment program of the Fund is speculative, entails substantial risks and includes alternative investment techniques not employed by traditional mutual funds. The Fund should not be relied upon as a complete investment program. The Fund's investment techniques (if they do not perform as designed) may increase the volatility of performance and the risk of investment loss, including the loss of the entire amount that is invested, and there can be no assurance that the investment objective of the Fund will be achieved. Moreover, certain investment techniques which the Fund may employ in its investment program can substantially increase the adverse impact to which the Fund's investments may be subject. There is no assurance that the investment processes of the Fund will be successful, that the techniques utilized therein will be implemented successfully or that they are adequate for their intended uses, or that the discretionary element of the investment processes of the Fund will be exercised in a manner that is successful or that is not adverse to the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation ("FDIC") or any government agency. Investors should carefully consider these risks before investing. The Fund's principal risks are presented below in alphabetical order, and not in the order of importance or potential exposure.

Absence of Regulation Risk. The Fund engages in over-the-counter ("OTC") transactions, which trade in a dealer network, rather than on an exchange. In general, there is less governmental regulation and supervision of transactions in the OTC markets (in which option contracts and certain options on swaps are generally traded) than of transactions entered into on organized exchanges.

Asset Allocation Risk. The Fund's allocations to the various asset classes may cause the Fund to underperform other funds with a similar investment objective.

Commodity Sector Risk. Exposure to the commodities markets may subject the Fund to greater volatility than investments in more traditional securities. The value of commodity-linked investments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, business, political and regulatory developments. The prices of energy, industrial metals, precious metals, agriculture and livestock sector commodities may fluctuate widely due to factors such as changes in value, supply and demand and governmental regulatory policies. The commodity-linked investments in which the SFA Subsidiary enters

into may involve counterparties in the financial services sector, and events affecting the financial services sector may cause the SFA Subsidiary's, and therefore the Fund's, share value to fluctuate.

Counterparty Risk. Many of the protections afforded to cleared transactions, such as the security afforded by transacting through a clearing house, might not be available in connection with OTC transactions. Therefore, in those instances in which the Fund enters into uncleared OTC transactions, the Fund will be subject to the risk that its direct counterparty will not perform its obligations under the transactions and that the Fund will sustain losses.

Credit/Default Risk. An issuer or guarantor of fixed income securities held by the Fund (which may have low credit ratings) may default on its obligation to pay interest and repay principal or default on any other obligation. Additionally, the credit quality of securities may deteriorate rapidly, which may impair the Fund's liquidity and cause significant deterioration in net asset value ("NAV"). These risks are more heightened in market environments where interest rates are rising as well as in connection with the Fund's investments in non-investment grade fixed income securities.

Derivatives Risk. The Fund's use of options, futures, forwards, swaps, options on swaps, structured securities and other derivative instruments may result in losses, including due to adverse market movements. These instruments, which may pose risks in addition to and greater than those associated with investing directly in securities, currencies or other assets and instruments, may increase market exposure and be illiquid or less liquid, volatile, difficult to price and leveraged so that small changes in the value of the underlying assets or instruments may produce disproportionate losses to the Fund. Certain derivatives are also subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligations. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with investments in more traditional securities and instruments.

Foreign Risk. Foreign securities may be subject to risk of loss because of more or less foreign government regulation; less public information; less stringent investor protections; less stringent accounting, corporate governance, financial reporting and disclosure standards; and less economic, political and social stability in the countries in which the Fund invests. The imposition of sanctions, confiscations, trade restrictions (including tariffs) and other government restrictions by the United States and other governments, or from problems in share registration, settlement or custody, may also result in losses. In addition, the Fund will be subject to the risk that an issuer of foreign sovereign debt or the government authorities that control the repayment of the debt may be unable or unwilling to repay the principal or interest when due.

Interest Rate Risk. When interest rates increase, fixed income securities or instruments held by the Fund will generally decline in value. Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. Changing interest rates may have unpredictable effects on the markets, may result in heightened market volatility and may detract from Fund performance. In addition, changes in monetary policy may exacerbate the risks associated with changing interest rates. Funds with longer average portfolio durations will generally be more sensitive to changes in interest rates than funds with a shorter average portfolio duration. Fluctuations in interest rates may also affect the liquidity of fixed income securities and instruments held by the Fund.

Investing in the Underlying Funds. The investments of the Fund are concentrated in one or more Underlying Funds (including ETFs and other registered investment companies) subject to limitations and/or

conditions prescribed by the Investment Company Act of 1940, as amended (the “Investment Company Act”), or rules, regulations or exemptive relief thereunder. The Fund’s investment performance is directly related to the investment performance of the Underlying Funds it holds. The Fund is subject to the risk factors associated with the investments of the Underlying Funds and will be affected by the investment policies and practices of the Underlying Funds in direct proportion to the amount of assets allocated to each. A strategy used by the Underlying Funds may fail to produce the intended results. If the Fund has a relative concentration of its portfolio in a single Underlying Fund, it may be more susceptible to adverse developments affecting that Underlying Fund and may be more susceptible to losses because of these developments.

Investments in ETFs. The Fund may invest directly in ETFs, including affiliated ETFs. The Fund’s investments in ETFs will be subject to the restrictions applicable to investments by an investment company in other investment companies, unless relief is otherwise provided under the terms of an SEC exemptive order or SEC exemptive rule.

Large Shareholder Transactions Risk. The Fund may experience adverse effects when certain large shareholders purchase or redeem large amounts of shares of the Fund. Such large shareholder redemptions, which may occur rapidly or unexpectedly, may cause the Fund to sell portfolio securities at times when it would not otherwise do so, which may negatively impact the NAV and liquidity of the Fund. Similarly, large Fund share purchases may adversely affect the performance of the Fund to the extent that the Fund is delayed in investing new cash or otherwise maintains a larger cash position than it ordinarily would. These transactions may also accelerate the realization of taxable income to shareholders if such sales of investments resulted in gains, and may also increase transaction costs. In addition, a large redemption could result in the current expenses of the Fund being allocated over a smaller asset base, leading to an increase in the expense ratio of the Fund.

Leverage Risk. Borrowing and the use of derivatives may result in leverage and may increase market exposure and make the Fund more volatile. The use of leverage may cause the Fund to liquidate portfolio positions to satisfy its obligations or to meet margin/collateral requirements when it may not be advantageous to do so. The use of leverage by the Fund can substantially increase the Fund’s investment risks and cause losses to be realized more quickly.

Liquidity Risk. The Fund may make investments that are illiquid or that may become less liquid in response to market developments or adverse investor perceptions. Illiquid investments may be more difficult to value. Liquidity risk may also refer to the risk that the Fund will not be able to pay redemption proceeds within the allowable time period because of unusual market conditions, declining prices of the securities sold, an unusually high volume of redemption requests, or other reasons. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions. Liquidity risk may be the result of, among other things, the reduced number and capacity of traditional market participants to make a market in fixed income securities or the lack of an active market. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where investor redemptions from fixed income funds may be higher than normal, potentially causing increased supply in the market due to selling activity. Redemptions by large shareholders may have a negative impact on the Fund’s liquidity.

Management Risk. A strategy used by the Investment Adviser may fail to produce the intended results. The Investment Adviser attempts to execute a complex strategy for the Fund using proprietary quantitative models. Investments selected using these models may perform

differently than expected as a result of the factors used in the models, the weight placed on each factor, changes from the factors’ historical trends, and technical and other issues in the construction, implementation and maintenance of the models (including, for example, data problems, unauthorized changes and/or software issues). There is no guarantee that the Investment Adviser’s use of these quantitative models will result in effective investment decisions for the Fund. Additionally, commonality of holdings across quantitative money managers may amplify losses.

Market Risk. The value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions throughout the world due to increasingly interconnected global economies and financial markets. Events such as war, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, rapid interest rate changes, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats could also significantly impact the Fund and its investments.

NAV Risk. The NAV of the Fund and the value of your investment will fluctuate.

Non-Hedging Foreign Currency Trading Risk. The Fund may engage in forward foreign currency transactions for hedging and non-hedging purposes. The Investment Adviser may purchase or sell foreign currencies through the use of forward contracts based on the Investment Adviser’s judgment regarding the direction of the market for a particular foreign currency or currencies. In pursuing this strategy, the Investment Adviser seeks to profit from anticipated movements in currency rates by establishing “long” and/or “short” positions in forward contracts on various foreign currencies. Foreign exchange rates can be extremely volatile and a variance in the degree of volatility of the market or in the direction of the market from the Investment Adviser’s expectations may produce significant losses to the Fund. Some of these transactions may also be subject to interest rate risk.

Option Writing Risk. Writing (selling) options may limit the opportunity to profit from an increase or decrease in the market value of a reference security in exchange for up-front cash (the premium) at the time of selling the option. In a sharp rising or falling market, the Fund could significantly underperform the market or other portfolios without an option writing strategy. The Fund could also experience a sudden, significant permanent loss due to dramatic movements in the market value of reference security, which may far exceed the premiums received for writing the option. Such significant losses could cause significant deteriorations in the Fund’s NAV.

Furthermore, the premium received from the Fund’s option writing strategies may not fully protect it against market movements because the Fund will continue to bear the risk of movements in the value of its portfolio investments. Writing (selling) options is a highly specialized activity that involves investment techniques and risks different from those associated with investments in more traditional securities and instruments.

Other Investment Companies Risk. By investing in other investment companies (including ETFs), investors will incur a proportionate share of the expenses of the other investment companies held by the Fund (including operating costs and investment management fees) in addition to the fees and expenses regularly borne by the Fund.

Short Selling/Position Risk. The Fund may enter into a short position through a futures contract, an option or swap agreement or through short sales of any instrument that the Fund may purchase for investment. Taking short positions involves leverage of the Fund’s assets and presents various risks. If the value of the underlying instrument or

market in which the Fund has taken a short position increases, then the Fund will incur a loss equal to the increase in value from the time that the short position was entered into plus any related interest payments or other fees. Taking short positions involves the risk that losses may be disproportionate, may exceed the amount invested and may be unlimited. To the extent the Fund uses the proceeds it receives from a short position to take additional long positions, the risks associated with the short position, including leverage risks, may be heightened, because doing so increases the exposure of the Fund to the markets and therefore could magnify changes to the Fund's NAV.

Stock Risk. Stock prices have historically risen and fallen in periodic cycles. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future.

Subsidiary Risk. The SFA Subsidiary is not registered under the Investment Company Act of 1940, as amended ("Investment Company Act") and is not subject to all the investor protections of the Investment Company Act. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the SFA Subsidiary to operate as described in the Prospectus and the SAI and could adversely affect the Fund.

Tax Risk. In reliance on an opinion of counsel, the Fund seeks to gain exposure to volatility index derivatives and the commodity markets primarily through investments in the SFA Subsidiary. The tax treatment of the Fund's investments in the SFA Subsidiary could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"), or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains and distributions made by the Fund. If the IRS were to successfully assert that a Fund's income from such investments was not "qualifying income," the Fund may fail to qualify as a regulated investment company ("RIC") under Subchapter M of the Code if over 10% of its gross income was derived from these investments. If the Fund failed to qualify as a RIC, it would be subject to federal and state income tax on all of its taxable income at regular corporate tax rates with no deduction for any distributions paid to shareholders, which would significantly adversely affect the returns to, and could cause substantial losses for, Fund shareholders.

Shareholders should review "Other Information" under "Taxation" in the Prospectus for more information.

Temporary Investments Risk. The Fund may invest its assets in high-quality, short-term debt obligations (including commercial paper, certificates of deposit, bankers' acceptances, repurchase agreements, debt obligations backed by the full faith and credit of the U.S. government and demand and time deposits of domestic and foreign banks and savings and loan associations) to maintain liquidity, to meet shareholder redemptions and for other short-term cash needs. Also, there may be times when, in the opinion of the Investment Adviser, abnormal market or economic conditions warrant that, for temporary defensive purposes, the Fund may invest without limitation in short-term obligations. When the Fund's assets are invested in such investments, the Fund may not be achieving its investment objective.

U.S. Government Securities Risk. The U.S. government may not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. U.S.

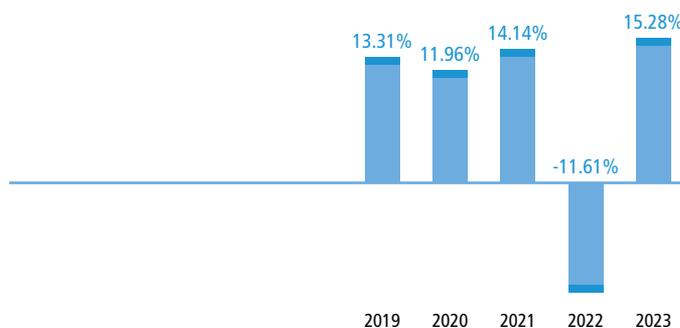

Government Securities issued by those agencies, instrumentalities and sponsored enterprises, including those issued by the Federal National Mortgage Association ("Fannie Mae"), Federal Home Loan Mortgage Corporation ("Freddie Mac") and the Federal Home Loan Banks, are neither issued nor guaranteed by the U.S. Treasury and, therefore, are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by the Fund may greatly exceed their current resources, including any legal right to support from the U.S. Treasury. It is possible that issuers of U.S. Government Securities will not have the funds to meet their payment obligations in the future.

PERFORMANCE

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) changes in the performance of the Fund's Class P Shares from year to year; and (b) how the average annual total returns of the Fund's Class P Shares compare to those of certain broad-based securities market indices and to the Strategic Factor Allocation Composite Index, a composite representation prepared by the Investment Adviser of the performance of the Fund's asset classes weighted according to their respective weightings in the Fund's target range. The Strategic Factor Allocation Composite Index is comprised of the S&P 500[®] Index (50%) and the Bloomberg U.S. Aggregate Bond Index (50%). For additional information about these benchmark indices, please see "Additional Performance and Benchmark Information" on page 16 of the Prospectus. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available at no cost at am.gs.com or by calling the phone number on the back cover of the Prospectus.

Performance reflects applicable fee waivers and/or expense limitations in effect during the periods shown.

CALENDAR YEAR (CLASS P)

	Returns	Quarter ended
Year-to-Date Return	12.94%	September 30, 2024
During the periods shown in the chart above:		
Best Quarter Return	8.60%	December 31, 2023
Worst Quarter Return	-9.30%	June 30, 2022

AVERAGE ANNUAL TOTAL RETURN

For the period ended December 31, 2023	1 Year	5 Years	Since Inception	Inception Date
Class P Shares				4/17/2018
Returns Before Taxes	15.28%	8.09%	6.81%	
Returns After Taxes on Distributions	13.74%	6.14%	4.72%	
Returns After Taxes on Distributions and Sale of Fund Shares	9.04%	5.74%	4.64%	
Strategic Factor Allocation Composite Index	15.58%	8.52%	7.03%	
Bloomberg U.S. Aggregate Bond Index	5.53%	1.10%	1.25%	
S&P 500 [®] Index	26.29%	15.68%	12.37%	

Benchmark returns do not reflect any deductions for fees or expenses.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. In addition, the after-tax returns shown are not relevant to investors who hold Fund Shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

PORTFOLIO MANAGEMENT

Goldman Sachs Asset Management, L.P. is the investment adviser for the Fund (the "Investment Adviser" or "GSAM").

Portfolio Managers: Oliver Bunn, Vice President, has managed the Fund since 2022 and Sergio Calvo de Leon, Vice President, has managed the Fund since 2023.

BUYING AND SELLING FUND SHARES

The Fund does not impose minimum purchase requirements for initial or subsequent investments in Class P Shares.

You may purchase and redeem (sell) Class P Shares of the Fund on any business day through the Goldman Sachs Private Wealth Management business unit, The Goldman Sachs Trust Company, N.A., The Goldman Sachs Trust Company of Delaware, The Ayco Company, L.P. or with certain intermediaries that are authorized to offer Class P Shares.

TAX INFORMATION

The Fund's distributions are taxable, and will be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account. Investments made through tax-deferred arrangements may become taxable upon withdrawal from such arrangements.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase the Fund through an intermediary that is authorized to offer Class P Shares, the Fund and/or its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your intermediary's website for more information.
