

GOLDMAN SACHS ETF TRUST

Goldman Sachs Access Ultra Short Bond ETF (the “Fund”)

*Supplement dated December 30, 2024 to the
Prospectus, Summary Prospectus and Statement of Additional Information (the “SAI”),
each dated December 29, 2024, as supplemented to date*

At a meeting held on December 11-12, 2024, upon the recommendation of Goldman Sachs Asset Management, L.P., the Board of Trustees of the Goldman Sachs ETF Trust approved a change to the Fund’s name. This change will not affect the Fund’s investment objective, principal investment strategy or current portfolio holdings. The Fund’s name will change to the “Goldman Sachs Ultra Short Bond ETF.” This change will become effective after the close of business on February 11, 2025 (the “Effective Date”).

Accordingly, on the Effective Date, the Fund’s Prospectus, Summary Prospectus and SAI are revised as follows:

All references in the Prospectus, Summary Prospectus and SAI to “Goldman Sachs Access Ultra Short Bond ETF” are replaced with “Goldman Sachs Ultra Short Bond ETF.”

This Supplement should be retained with your Prospectus, Summary Prospectus and SAI for future reference.

Goldman Sachs Access Ultra Short Bond ETF—Summary

Ticker: GSST Stock Exchange: Cboe BZX Exchange, Inc.

INVESTMENT OBJECTIVE

The Goldman Sachs Access Ultra Short Bond ETF (the “Fund”) seeks to provide current income with preservation of capital.

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell Shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.20%
Distribution and Service (12b-1) Fee	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.20%
Fee Waiver ¹	(0.04)%
Total Annual Fund Operating Expenses After Fee Waiver	0.16%

¹ The Investment Adviser has agreed to waive a portion of its management fee in order to achieve an effective net management fee rate of 0.16% as an annual percentage rate of average daily net assets of the Fund through at least December 29, 2025, and prior to such date the Investment Adviser may not terminate the arrangement without the approval of the Board of Trustees.

EXPENSE EXAMPLE

This Example is intended to help you compare the cost of owning Shares of the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same (except that the Example incorporates the fee waiver arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$16	\$60	\$109	\$251

PORTFOLIO TURNOVER

The Fund may pay transaction costs when it buys and sells securities or instruments (*i.e.*, “turns over” its portfolio). A high rate of portfolio turnover may result in increased transaction costs, including brokerage commissions, which must be borne by the Fund and its shareholders, and is also likely to result in higher short-term capital gains for taxable shareholders. These costs are not reflected in total annual fund operating expenses or in the expense example above, but are reflected in the Fund’s performance. The Fund’s portfolio turnover rate for the fiscal year ended August 31, 2024 was 87% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at the time of purchase) (“Net Assets”) in a broad range of U.S. dollar denominated bonds. The Fund primarily invests in obligations issued or guaranteed by the U.S. Government, its agencies, authorities, instrumentalities or sponsored enterprises (“U.S. Government Securities”), obligations of U.S. banks, corporate notes, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities, fixed and floating rate mortgage-backed securities, asset-backed securities, collateralized loan obligations (“CLOs”) and repurchase agreements. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks, companies and governments or their agencies, authorities, instrumentalities or sponsored enterprises.

The Fund will generally focus its investments in securities of issuers that, at the time of purchase, have a short-term credit rating of at least investment grade by at least one nationally recognized statistical rating organization (“NRSRO”) (at least A-2, P-2, or F2 by S&P Global Ratings (“S&P”), Moody’s Investors Service, Inc. (“Moody’s”) or Fitch Ratings, Inc. (“Fitch”), respectively), have a long-term credit rating of at least investment grade by at least one NRSRO (at least BBB-, Baa3, or BBB by S&P, Moody’s or Fitch, respectively) if such securities only maintain long-term ratings, or, if unrated, are determined by the Investment Adviser to be of comparable credit quality at the time of purchase. The Fund may also rely on the credit quality of a guarantee or demand feature in determining the credit quality of a security supported by the guarantee or demand feature.

The Fund will concentrate its investments in the financial services group of industries. Therefore, under normal circumstances, the Fund will invest more than 25% of its total assets in securities issued by companies in the financial services group of industries and repurchase agreements secured by such obligations.

Under normal circumstances, the Fund’s effective duration is expected to be one year or less. “Duration” is a measure of a debt security’s price sensitivity to changes in interest rates. The longer the duration of the Fund (or an individual debt security), the more sensitive its market price to changes in interest rates. In computing duration, the Fund will estimate the duration of obligations that are subject to prepayment or redemption by the issuer, taking into account the influence of interest rates on prepayments and coupon flows. This method of computing duration is known as “option-adjusted” duration.

The Fund is an actively managed exchange-traded fund (“ETF”), which is a fund that trades like other publicly-traded securities. The Fund is not an index fund and does not seek to replicate the performance of a specified index.

The Investment Adviser measures the Fund’s performance against the FTSE Three-Month U.S. Treasury Bill Index.

THE FUND IS NOT A MONEY MARKET FUND AND DOES NOT ATTEMPT TO MAINTAIN A STABLE NET ASSET VALUE.

PRINCIPAL RISKS OF THE FUND

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation (“FDIC”) or any government agency. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective. Investments in the Fund involve substantial risks which prospective investors should consider carefully before investing. The Fund’s principal risks are presented below in alphabetical order, and not in the order of importance or potential exposure.

Cash Transactions Risk. Unlike certain ETFs, the Fund expects to effect its creations and redemptions primarily for cash, rather than primarily for in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF which generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to raise cash to meet redemption requests.

Credit/Default Risk. An issuer or guarantor of fixed income securities or instruments held by the Fund may default on its obligation to pay interest and repay principal or default on any other obligation. Additionally, the credit quality of securities or instruments may deteriorate rapidly, which may impair the Fund’s liquidity and cause significant deterioration in net asset value (“NAV”).

Collateralized Loan Obligations Risk. The Fund may invest in CLOs and other similarly structured investments. A CLO is an asset-backed security whose underlying collateral is a pool of loans, which may include, among others, domestic and foreign floating rate and fixed rate senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. In addition to the normal risks associated with loan- and credit-related securities discussed elsewhere in the Prospectus (e.g., loan-related investments risk, interest rate risk and default risk), investments in CLOs carry additional risks including, but not limited to, the risk that: (i) distributions from the collateral may not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the Fund may invest in tranches of CLOs that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; and (v) the CLO’s manager may perform poorly.

CLOs issue classes or “tranches” that offer various maturity, risk and yield characteristics. Losses caused by defaults on underlying assets are borne first by the holders of subordinate tranches. Despite the protection from subordinate tranches, more senior tranches of CLOs can experience losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of more subordinate tranches, market anticipation of defaults, as well as aversion to CLO securities as a class. The Fund’s investments in CLOs primarily consist of investment grade tranches.

Financial Services Industry Group Risk. An adverse development in the financial services industry group, including U.S. and foreign banks, broker-dealers, insurance companies, finance companies (e.g., automobile finance) and related asset-backed securities, may affect the value of the Fund’s investments more than if the Fund were not invested to such a degree in this industry group. Companies in the financial services industry group may be particularly susceptible to certain economic factors such as interest rate changes, fiscal, regulatory and monetary policy and general economic cycles.

Floating and Variable Rate Obligations Risk. For floating and variable rate obligations, there may be a lag between an actual change in the underlying interest rate benchmark and the reset time for an interest payment of such an obligation, which could harm or benefit the Fund, depending on the interest rate environment or other circumstances. In a rising interest rate environment, for example, a

floating or variable rate obligation that does not reset immediately would prevent the Fund from taking full advantage of rising interest rates in a timely manner. However, in a declining interest rate environment, the Fund may benefit from a lag due to an obligation's interest rate payment not being immediately impacted by a decline in interest rates.

Certain floating and variable rate obligations have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the "reference rate"), such as the Secured Overnight Financing Rate ("SOFR"), a term SOFR rate published by CME Group Benchmark Administration Limited (CBA) calculated using certain derivatives markets ("Term SOFR") or another rate determined using SOFR values. Such a floor protects the Fund from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the obligation, and the Fund may not benefit from increasing interest rates for a significant amount of time.

Some floating or variable rate obligations or investments of the Fund may have previously referenced the London Interbank Offered Rate ("LIBOR"). As a result of benchmark reforms, publication of all LIBOR settings has ceased. Public and private sector actors have worked to establish alternative reference rates, like SOFR or Term SOFR, to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR which may affect the value, volatility, liquidity or return on certain of the Fund's floating and variable rate obligations and investments and result in costs incurred in connection with changing reference rates used for positions, closing out positions and entering into new trades. For example, LIBOR was previously calculated using the average rate at which a selection of large global banks reported they could borrow from one another and SOFR is a measure of the cost of borrowing cash overnight, collateralized by the U.S. Treasury securities, and is based on directly observable U.S. Treasury-backed repurchase transactions. Certain of the Fund's obligations or investments may have transitioned from LIBOR. The transition from LIBOR to alternative reference rates may result in operational issues for the Fund or its obligations or investments. Any pricing adjustments to the Fund's obligations or investments resulting from use of an alternative reference rate may also adversely affect the Fund's performance and/or NAV. No assurances can be given as to the impact of the LIBOR transition (and the timing of any such impact) on the Fund and its obligations and investments.

Foreign Risk. Foreign securities may be subject to risk of loss because of more or less foreign government regulation; less public information; less stringent investor protections; less stringent accounting, corporate governance, financial reporting and disclosure standards; and less economic, political and social stability in the countries in which the Fund invests. The imposition of sanctions, exchange controls (including repatriation restrictions), confiscations, trade restrictions (including tariffs) and other government restrictions by the United States and other governments, or from problems in share registration, settlement or custody, may also result in losses. The type and severity of sanctions and other similar measures, including counter sanctions and other retaliatory actions, that may be imposed could vary broadly in scope, and their impact is impossible to predict. For example, the imposition of sanctions and other similar measures could, among other things, cause a decline in the value and/or liquidity of securities issued by the sanctioned country or companies located in or economically tied to the sanctioned country and increase market volatility and disruption in the sanctioned country and throughout the world. Sanctions and other similar measures could limit or prevent the Fund from buying and selling securities (in the sanctioned country and other markets), significantly delay or prevent the settlement of securities transactions, and significantly impact the Fund's liquidity and performance. In addition, the Fund will be subject to the risk that an issuer of non-U.S. sovereign debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay the principal or interest when due.

Industry Concentration Risk. The Fund concentrates its investments in the financial services group of industries, which has historically experienced substantial price volatility. This concentration may subject the Fund to greater risk of loss as a result of adverse economic, business, political, environmental or other developments than if its investments were diversified across different industries.

Interest Rate Risk. When interest rates increase, fixed income securities or instruments held by the Fund will generally decline in value. Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. Changing interest rates may have unpredictable effects on the markets, may result in heightened market volatility and may detract from Fund performance. In addition, changes in monetary policy may exacerbate the risks associated with changing interest rates. Funds with longer average portfolio durations will generally be more sensitive to changes in interest rates than funds with a shorter average portfolio duration. Fluctuations in interest rates may also affect the liquidity of fixed income securities and instruments held by the Fund.

Large Shareholder Risk. Certain shareholders, including other funds advised by the Investment Adviser, may from time to time own a substantial amount of the Fund's Shares. In addition, a third party investor, the Investment Adviser or an affiliate of the Investment Adviser, an authorized participant, a lead market maker, or another entity (*i.e.*, a seed investor) may invest in the Fund and hold its investment solely to facilitate commencement of the Fund or to facilitate the Fund's achieving a specified size or scale. Any such investment may be held for a limited period of time. There can be no assurance that any large shareholder would not redeem its investment, that the size of the Fund would be maintained at such levels or that the Fund would continue to meet applicable listing requirements. Redemptions by large shareholders could have a significant negative impact on the Fund, including on the Fund's liquidity. In addition, transactions by large shareholders may account for a large percentage of the trading volume on Cboe BZX Exchange, Inc. ("Cboe") and may, therefore, have a material upward or downward effect on the market price of the Shares.

Liquidity Risk. The Fund may invest in securities or instruments that trade in lower volumes and may make investments that are less liquid than other investments. Also, the Fund may make investments that are illiquid or that may become less liquid in response to market developments or adverse investor perceptions. Investments that are illiquid or that trade in lower volumes may be more difficult to value. When there is no willing buyer and investments cannot be readily sold at the desired time or price, the Fund may have to accept a lower price or may not be able to sell the security or instrument at all. An inability to sell one or more portfolio positions can adversely affect the Fund's value. Liquidity risk may be the result of, among other things, the reduced number and capacity of traditional market participants to make a market in fixed income securities or the lack of an active market. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where investor redemptions from fixed income funds may be higher than normal, potentially causing increased supply in the market due to selling activity. Redemptions by large shareholders (including seed investors) may have a negative impact on the Fund's liquidity.

If the Fund is forced to sell securities at an unfavorable time and/or under unfavorable conditions, such sales may adversely affect the Fund's NAV.

Market Risk. The value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions throughout the world due to increasingly interconnected global economies and financial markets. Events such as war, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, rapid interest rate changes, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats could also significantly impact the Fund and its investments.

Market Trading Risk. The NAV of the Fund and the value of your investment may fluctuate. Market prices of Shares may fluctuate, in some cases significantly, in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Fund faces numerous market trading risks, including disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares. Any of these factors, among others, may result in Shares trading at a significant premium or discount to NAV, which will be reflected in the intraday bid/ask spreads and/or the closing price of Shares as compared to NAV. In addition, because liquidity in certain underlying securities may fluctuate, Shares may trade at a larger premium or discount to NAV than shares of other kinds of ETFs. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may pay more for, or receive less than, the underlying value of the Shares, respectively. Additionally, in stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings.

Mortgage-Backed and Other Asset-Backed Securities Risk. Mortgage-related and other asset-backed securities are subject to credit/default, interest rate and certain additional risks, including "extension risk" (i.e., in periods of rising interest rates, issuers may pay principal later than expected) and "prepayment risk" (i.e., in periods of declining interest rates, issuers may pay principal more quickly than expected, causing Fund to reinvest proceeds at lower prevailing interest rates). Due to these risks, asset-backed securities may become more volatile in certain interest rate environments. Mortgage-backed securities offered by non-governmental issuers are subject to other risks as well, including failures of private insurers to meet their obligations and unexpectedly high rates of default on the mortgages backing the securities, particularly during periods of rising interest rates. Other asset-backed securities are subject to risks similar to those associated with mortgage-backed securities, as well as risks associated with the nature and servicing of the assets backing the securities. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk.

Municipal Securities Risk. Municipal securities are subject to credit/default risk, interest rate risk and certain additional risks. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the bonds of similar projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal securities (such as general obligation bonds, private activity bonds and moral obligation bonds). While interest earned on municipal securities is generally not subject to federal tax, any interest earned on taxable municipal securities is fully taxable at the federal level and may be subject to tax at the state level.

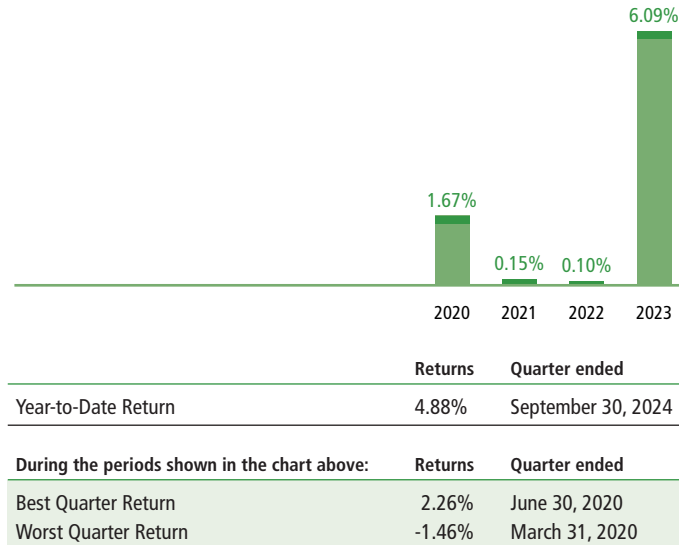

U.S. Government Securities Risk. The U.S. government may not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. U.S. Government Securities issued by the Federal National Mortgage Association ("Fannie Mae"), Federal Home Loan Mortgage Corporation ("Freddie Mac") and Federal Home Loan Banks are neither issued nor guaranteed by the U.S. Treasury and, therefore, are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by the Fund may greatly exceed their current resources, including any legal right to support from the U.S. Treasury. It is possible that issuers of U.S. Government Securities will not have the funds to meet their payment obligations in the future.

Valuation Risk. The sale price the Fund could receive for a security may differ from the Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. The Fund relies on various sources to calculate its NAV. The information may be provided by third parties that are believed to be reliable, but the information may not be accurate due to errors by such pricing sources, technological issues or otherwise. NAV calculation may also be impacted by operational risks arising from factors such as failures in systems and technology.

PERFORMANCE

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) changes in the performance of the Fund's Shares from year to year; and (b) how the average annual total returns of the Fund's Shares compare to those of a regulatorily required broad-based securities market index (Bloomberg US Aggregate Bond Index) (the "Regulatory Benchmark") and the FTSE Three-Month U.S. Treasury Bill Index (the "Performance Benchmark"). The Performance Benchmark is generally more representative of the market sectors and/or types of investments in which the Fund invests or to which the Fund has exposure and which the Investment Adviser uses to measure the Fund's performance. The Fund has included in the table below the performance of the Regulatory Benchmark, which represents a broader measure of market performance, to comply with new regulatory requirements. For additional information about these benchmark indices, please see "Additional Benchmark Information" on page 8 of the Prospectus. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available at no cost at am.gs.com or by calling the appropriate phone number on the back cover of the Prospectus.

Performance reflects applicable fee waivers and/or expense limitations in effect during the periods shown.

AVERAGE ANNUAL TOTAL RETURN

For the period ended December 31, 2023	1 Year	Since Inception	Inception Date
Goldman Sachs Access Ultra Short Bond ETF			4/15/2019
Returns Before Taxes	6.09%	2.24%	
Returns After Taxes on Distributions	3.96%	1.22%	
Returns After Taxes on Distributions and Sale of Fund Shares	3.57%	1.24%	
FTSE Three-Month U.S. Treasury Bill Index	5.26%	1.88%	
Bloomberg US Aggregate Bond Index	5.53%	0.63%	

Benchmark returns do not reflect any deductions for fees or expenses.

PORTFOLIO MANAGEMENT

Goldman Sachs Asset Management, L.P. is the investment adviser for the Fund (the "Investment Adviser" or "GSAM").

Portfolio Managers: Todd Henry, Vice President, has managed the Fund since April 2021; and David Westbrook, Vice President, has managed the Fund since April 2019.

BUYING AND SELLING FUND SHARES

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because Shares trade at market prices, rather than NAV, Shares of the Fund may trade at a price greater than NAV (*i.e.*, a premium) or less than NAV (*i.e.*, a discount).

You may incur costs attributable to the difference between the highest price a buyer is willing to pay for Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) (the "bid-ask spread") when buying or selling Shares in the secondary market.

Recent information, including information about the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund's website at am.gs.com.

TAX INFORMATION

The Fund's distributions are taxable, and will be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account. Investments made through tax-deferred arrangements may become taxable upon withdrawal from such arrangements.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), GSAM or other related companies may pay the intermediary for the sale of Fund Shares or related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Investment Management Approach

INVESTMENT OBJECTIVES

The Fund seeks to provide current income with preservation of capital. The Fund's investment objective may be changed without shareholder approval.

PRINCIPAL INVESTMENT STRATEGIES

Goldman Sachs Access Ultra Short Bond ETF

The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its Net Assets in a broad range of U.S. dollar denominated bonds. The Fund primarily invests in U.S. Government Securities, obligations of U.S. banks, corporate notes, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities, fixed and floating rate mortgage-backed securities, asset-backed securities, CLOs and repurchase agreements. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks, companies and governments or their agencies, authorities, instrumentalities or sponsored enterprises. Shareholders will be provided with sixty days' notice in the manner prescribed by the SEC before any change in the Fund's policy to invest at least 80% of its Net Assets in the particular type of investment suggested by its name.

The Fund will generally focus its investments in securities of issuers that, at the time of purchase, have a short-term credit rating of at least investment grade by at least one NRSRO (at least A-2, P-2, or F2 by S&P, Moody's or Fitch, respectively), have a long-term credit rating of at least investment grade by at least one NRSRO (at least BBB-, Baa3, or BBB by S&P, Moody's or Fitch, respectively) if such securities only maintain long-term ratings, or, if unrated, are determined by the Investment Adviser to be of comparable credit quality at the time of purchase. The Fund may also rely on the credit quality of a guarantee or demand feature in determining the credit quality of a security supported by the guarantee or demand feature.

The Fund will concentrate its investments in the financial services group of industries. Therefore, under normal circumstances, the Fund will invest more than 25% of its total assets in securities issued by companies in the financial services group of industries and repurchase agreements secured by such obligations.

Under normal circumstances, the Fund's effective duration is expected to be one year or less. "Duration" is a measure of a debt security's price sensitivity to changes in interest rates. The longer the duration of the Fund (or an individual debt security), the more sensitive its market price to changes in interest rates. In computing duration, the Fund will estimate the duration of obligations that are subject to prepayment or redemption by the issuer, taking into account the influence of interest rates on prepayments and coupon flows. This method of computing duration is known as "option-adjusted" duration.

The Fund is an actively managed ETF, which is a fund that trades like other publicly-traded securities. The Fund is not an index fund and does not seek to replicate the performance of a specified index.

The Fund may, from time to time, take temporary defensive positions that are inconsistent with the Fund's principal investment strategies in attempting to respond to adverse market, political or other conditions. For temporary defensive purposes, the Fund may invest up to 100% of its total assets in U.S. Government Securities, commercial paper rated at least A-2 by S&P, P-2 by Moody's, or having a comparable credit rating by another NRSRO (or if unrated, determined by the Investment Adviser to be of comparable credit quality), certificates of deposit, bankers' acceptances, repurchase agreements, non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year, certain ETFs and other investment companies and cash items. Cash items are not income-generating and, as a result, the Fund's current yield may be adversely affected during periods when such positions are held. Cash positions may also subject the Fund to additional risks and costs, such as increased exposure to the custodian bank holding the assets and any fees imposed for large cash balances. **When the Fund's assets are invested in such instruments, the Fund may not be achieving its investment objective.**

The Investment Adviser measures the Fund's performance against the FTSE Three-Month U.S. Treasury Bill Index. The Fund's broad-based securities market index is the Bloomberg U.S. Aggregate Bond Index.

THE FUND IS NOT A MONEY MARKET FUND AND DOES NOT ATTEMPT TO MAINTAIN A STABLE NET ASSET VALUE.

Goldman Sachs Fixed Income Team's Investing Philosophy

The Goldman Sachs Access Ultra Short Bond ETF is managed to seek to provide current income with preservation of capital. The Investment Adviser follows a conservative, risk-managed investment process.

Our process:

- Combines diversified sources of return by employing multiple strategies
- Takes a global perspective to uncover relative value opportunities
- Employs focused specialist teams to seek to identify short-term mispricings and incorporate long-term views
- Emphasizes a risk-aware approach as we view risk management as both an offensive and defensive tool

The Fixed Income Portfolio Management Team implements this overall philosophy through an investment process that seeks to provide current income with preservation of capital by utilizing a diverse set of investment strategies and revolves around four key elements:

1. Developing a risk budget—Lead portfolio managers (the “Portfolio Team”) set the strategic direction of the Fund by establishing a “risk budget.” The “risk budget” for the Fund is the range the portfolio managers will allow the Fund to deviate from its benchmark with respect to overall risk, in this Fund primarily through sector allocations, country allocations, securities selection, and, to a lesser extent, duration. Following analysis of risk and return objectives, they allocate the overall risk budget to each component strategy in an effort to seek to provide current income with preservation of capital.

2. Fundamental investment process—The GSAM Fixed Income Team employs a fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative. Traditional fundamental factors that the Fixed Income Portfolio Management Team may consider include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. As part of its fundamental investment process, the Fixed Income Portfolio Management Team may integrate environmental, social and governance (“ESG”) factors alongside traditional fundamental factors to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. ESG factors that the Fixed Income Portfolio Management Team may consider include, but are not limited to, physical risk (e.g., wildfires, floods, droughts and rising sea levels), carbon intensity and emissions profiles, governance practices and board structure. The identification of a risk related to an ESG factor will not necessarily exclude a particular fixed income security and/or sector that, in the Fixed Income Portfolio Management Team’s view, is otherwise suitable and attractively priced for investment, and the Fixed Income Portfolio Management Team may invest in a security or sector without integrating ESG factors or considerations into its fundamental investment process. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Fixed Income Portfolio Management Team may utilize data sources provided by third-party vendors and/or engage directly with issuers when assessing the above factors.

3. Generating investment views and strategies—Our Top-down and Bottom-up Strategy Teams (collectively, “Strategy Teams”) generate investment ideas within their areas of specialization. The Top-down Strategy Teams are responsible for Cross-Sector and Duration decisions. Concurrently, Bottom-up Strategy Teams, comprised of sector specialists, formulate sub-sector allocation and security selection decisions. The Fund will only utilize Strategy Teams consistent with the Fund’s investment policies.

4. Constructing the portfolios—The Portfolio and Strategy Teams construct the Fund’s portfolio through a collaborative process in which the Portfolio Team oversees the overall portfolio while the Strategy Teams actively manage the securities and strategies within their areas of specialization. This process enables the Portfolio Team to build a portfolio consisting of the ideas of the individual Strategy Teams, consistent with the Fund’s overall risk and return objectives.

ADDITIONAL BENCHMARK INFORMATION

References in the Prospectus to a Fund’s Regulatory or Performance Benchmark (or any other benchmark) are for informational purposes only, and unless otherwise noted, are not an indication of how a particular Fund is managed or a particular Fund’s risk characteristics.

OTHER INVESTMENT PRACTICES AND SECURITIES

The following tables identify some of the investment techniques that may (but are not required to) be used by the Fund in seeking to achieve its investment objective. The Fund may be subject to additional limitations on its investments not shown here. Numbers in these tables show allowable usage only; for actual usage, consult the Fund’s Form N-CSR dated August 31, 2024. For more information about these and other investment practices and securities, see Appendix A. On each business day, before commencement of trading in Fund Shares on Cboe, the Fund will disclose on its website (am.gs.com) the identities and quantities of the portfolio securities and

other assets held by the Fund that will form the basis for the Fund’s calculation of NAV at the end of the business day. In addition, a description of the Fund’s policies and procedures with respect to the disclosure of the Fund’s portfolio holdings is available in the Fund’s Statement of Additional Information (“SAI”).

Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any other governmental agency. The principal risks of the Fund are discussed in the Summary section of the Prospectus. The following section provides additional information on the risks that apply to the Fund, which may result in a loss of your investment. The risks applicable to the Fund are presented below in alphabetical order, and not in the order of importance or potential exposure. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective. Investments in the Fund involve substantial risks which prospective investors should consider carefully before investing.

The Goldman Sachs Access Ultra Short Bond ETF is an actively managed ETF, which is a fund that trades like other publicly-traded securities. The Fund is not an index fund and does not seek to replicate the performance of a specified index.

The investment objective and policies of the Goldman Sachs Access Ultra Short Bond ETF are similar to other funds advised by the adviser or its affiliates. However, the investment results of the Fund may be higher or lower than, and there is no guarantee that the investment results of the Fund will be comparable to, any other of these funds. A new fund or a fund with fewer assets under management may be more significantly affected by purchases and redemptions of its Creation Units than a fund with relatively greater assets under management would be affected by purchases and redemptions of its shares. As compared to a larger fund, a new or smaller fund is more likely to sell a comparatively large portion of its portfolio to meet significant Creation Unit redemptions, or invest a comparatively large amount of cash to facilitate Creation Unit purchases, in each case when the fund otherwise would not seek to do so. Such transactions may cause funds to make investment decisions at inopportune times or prices or miss attractive investment opportunities. Such transactions may also accelerate the realization of taxable income if sales of securities resulted in gains and the fund redeems Creation Units for cash, or otherwise cause a fund to perform differently than intended. While such risks may apply to funds of any size, such risks are heightened in funds with fewer assets under management. In addition, new funds may not be able to fully implement their investment strategy immediately upon commencing investment operations, which could reduce investment performance.

- **Absence of Active Market Risk**—There can be no assurance that active trading markets for the Shares will develop or be maintained by market makers or authorized participants, and there are no obligations of market makers to make a market in the Fund’s Shares or of authorized participants to submit purchase or redemption orders for Creation Units. ALPS Distributors, Inc., the distributor of the Shares (the “Distributor”), does not maintain a secondary market in the Shares.

Although market makers will generally take advantage of differences between the NAV and the trading price of Fund Shares through arbitrage opportunities, there is no guarantee that they will do so. Decisions by market makers or authorized participants to reduce their role or “step away” from market making or creation/redemption activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying value of the Fund’s portfolio securities and the Fund’s market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intraday bid/ask spreads for Shares. Market makers and authorized participants may be less willing to create or redeem Fund Shares if there is a lack of an active market for the Shares or its underlying investments, which may also contribute to the Fund’s Shares trading at a premium or discount to NAV.

- **Asset-Backed and Receivables-Backed Securities Risk**—The Fund may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are subject to certain additional risks. Generally, rising interest rates tend to extend the duration of fixed rate asset-backed securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if the Fund holds asset-backed securities, it may exhibit additional volatility. This is known as extension risk. In addition, adjustable and fixed rate asset-backed securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their principals sooner than expected. This can reduce the returns of the Fund because the Fund may have to reinvest that money at the lower prevailing interest rates. These risks are generally greater for longer-term asset-backed securities.

The Fund's investments in asset-backed securities are also subject to risks associated with the nature of the assets and the servicing of those assets. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk.

- **Authorized Participant Concentration Risk**—Only an authorized participant may engage in creation or redemption transactions directly with the Fund, and the Fund may have a limited number of financial institutions that act as authorized participants. None of those authorized participants is obligated to engage in creation and/or redemption transactions. To the extent that those authorized participants exit the business or are unable to or choose not to process creation and/or redemption orders, and no other authorized participant is able to step forward to create and redeem Shares, there may be a significantly diminished trading market for Shares. As a result, Shares may trade at a discount (or premium) to NAV and possibly face trading halts and/or de-listing. Authorized Participant concentration risk may be heightened to the extent the Fund invests in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.
- **Call/Prepayment Risk**—An issuer could exercise its right to pay principal on an obligation held by the Fund earlier than expected. This may happen when there is a decline in interest rates, when credit spreads change, or when an issuer's credit quality improves. Under these circumstances, the Fund may be unable to recoup all of its initial investment and will also suffer from having to reinvest in lower-yielding securities.
- **Cash Transactions Risk**—Unlike certain ETFs, the Fund effects its redemptions primarily for cash, rather than primarily for in-kind securities. As a result, an investment in the Fund may be less tax-efficient than an investment in a more conventional ETF. Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to raise cash to meet redemption requests. Because the Fund currently intends to effect all or a portion of redemptions, as applicable, for cash, rather than in-kind distributions, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind, or to recognize such gain sooner than would otherwise be required. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF.
- **Collateralized Loan Obligations and Other Collateralized Debt Obligations Risk**—The Fund may invest in CLOs and other similarly structured investments. A CLO is an asset-backed security whose underlying collateral is a pool of loans, which may include, among others, domestic and foreign floating rate and fixed rate senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. In addition to the normal risks associated with loan- and credit-related securities discussed elsewhere in the Prospectus (e.g., interest rate risk and default risk), investments in CLOs carry additional risks including, but not limited to, the risk that: (i) distributions from the collateral may not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the Fund may invest in tranches of CLOs that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; and (v) the CLO's manager may perform poorly. CLOs may charge management and other administrative fees, which are in addition to those of the Fund.

CLOs issue classes or “tranches” that offer various maturity, risk and yield characteristics. Losses caused by defaults on underlying assets are borne first by the holders of subordinate tranches. Tranches are categorized as senior, mezzanine and subordinated/equity, according to their degree of risk. If there are defaults or the CLO's collateral otherwise underperforms, scheduled payments to senior tranches take precedence over those of mezzanine tranches, and scheduled payments to mezzanine tranches take precedence over those of subordinated/equity tranches. The riskiest portion is the “equity” tranche which bears the bulk of defaults from the collateral and serves to protect the other, more senior tranches from default in all but the most severe circumstances. Because it is partially protected from defaults, a senior tranche from a CLO trust typically has higher ratings and lower yields than its underlying collateral and may be rated investment grade. Despite the protection from the equity and mezzanine tranches, more senior tranches of CLOs can experience losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of more subordinate tranches, market anticipation of defaults, as well as aversion to CLO securities as a class. The Fund's investments in CLOs primarily consist of investment grade tranches.

Typically, CLOs are privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in CLOs may be characterized by the Fund as illiquid investments and may have limited independent pricing transparency. However, an active dealer market may exist for CLOs that qualify under the Rule 144A “safe harbor” from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers, and such CLOs may be characterized by the Fund as liquid investments.

The Fund may also invest in collateralized debt obligations (“CDOs”), which are structured similarly to CLOs, but are backed by pools of assets that are debt securities (rather than being limited only to loans), typically including bonds, other structured finance securities (including other asset-backed securities and other CDOs) and/or synthetic instruments. Like CLOs, the risks of an investment in a CDO depend largely on the type and quality of the collateral securities and the tranche of the CDO in which the Fund invests. CDOs collateralized by pools of asset-backed securities carry the same risks as investments in asset-backed securities directly, including losses with respect to the collateral underlying those asset-backed securities. In addition, certain CDOs may not hold their underlying collateral directly, but rather, use derivatives such as swaps to create “synthetic” exposure to the collateral pool. Such CDOs entail the risks associated with derivative instruments.

- **Credit/Default Risk**—An issuer or guarantor of fixed income securities or instruments held by the Fund may default on its obligation to pay interest and repay principal or default on any other obligation. The credit quality of the Fund’s portfolio securities or instruments may meet the Fund’s credit quality requirements at the time of purchase but then deteriorate thereafter, and such a deterioration can occur rapidly. In certain instances, the downgrading or default of a single holding or guarantor of the Fund’s holdings may impair the Fund’s liquidity and have the potential to cause significant NAV deterioration.
- **Cybersecurity Risk**—The Fund may be susceptible to operational and information security risks resulting from cyber-attacks. Cyber-attacks include, among others, stealing or corrupting confidential information and other data that is maintained online or digitally for financial gain, denial-of-service attacks on websites causing operational disruption, and the unauthorized release of confidential information and other data. Cyber-attacks have the ability to cause significant disruptions and impact business operations; to result in financial losses; to prevent shareholders from transacting business; to interfere with the Fund’s calculation of NAV; and to lead to violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs and/or additional compliance costs. Cyber-attacks affecting the Fund or its Investment Adviser, custodian, Transfer Agent, or other third-party service providers may adversely impact the Fund and its shareholders.
- **ESG Integration Risk**—The Investment Adviser employs a fundamental investment process that may integrate ESG factors with traditional fundamental factors. The relevance and weightings of specific ESG factors to or within the fundamental investment process varies across asset classes, sectors and strategies and no one factor or consideration is determinative. When integrating ESG factors into the investment process, the Investment Adviser may rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. ESG information from third-party data providers may be incomplete, inaccurate or unavailable, which may adversely impact the investment process. Moreover, ESG information, whether from an external and/or internal source, is, by nature and in many instances, based on a qualitative and subjective assessment. An element of subjectivity and discretion is therefore inherent to the interpretation and use of ESG data. The process for conducting ESG assessments and implementation of ESG views in client/fund portfolios, including the format and content of such analysis and the tools and/or data used to perform such analysis, may also vary among the Investment Adviser’s portfolio management teams. While the Investment Adviser believes that the integration of material ESG factors into the Fund’s investment process has the potential to identify financial risks and contribute to the Fund’s long-term performance, ESG factors may not be considered for each and every investment decision, and there is no guarantee that the integration of ESG factors will result in better performance. Investors can differ in their views of what constitutes positive or negative ESG characteristics. Moreover, the current lack of common standards may result in different approaches to integrating ESG factors. As a result, the Fund may invest in companies that do not reflect the beliefs and values of any particular investor. The Investment Adviser’s approach to ESG integration may evolve and develop over time, both due to a refinement of investment decision-making processes to address ESG factors and risks, and because of legal and regulatory developments.
- **Extension Risk**—An issuer could exercise its right to pay principal on an obligation held by the Fund later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.
- **Financial Services Industry Group Risk**—An adverse development in the financial services industry group, including U.S. and foreign banks, broker-dealers, insurance companies, finance companies (e.g., automobile finance) and related asset-backed securities, may affect the value of the Fund’s investments more than if the Fund were not invested to such a degree in this industry. Companies in the financial services industry group may be particularly susceptible to certain economic factors such as interest rate changes, fiscal, regulatory and monetary policy and general economic cycles. For example, deteriorating economic and business conditions can disproportionately impact companies in the financial services industry group due to increased defaults on payments by borrowers. Moreover, political and regulatory changes can affect the operations and financial results of companies in the financial services industry group, potentially imposing additional costs and expenses or restricting the types of business activities of these companies.
- **Floating and Variable Rate Obligations Risk**—Floating rate and variable rate obligations are debt instruments issued by companies or other entities with interest rates that reset periodically (typically, daily, monthly, quarterly, or semi-annually) in response to changes in the market rate of interest on which the interest rate is based. For floating and variable rate obligations, there may be a lag between an actual change in the underlying interest rate benchmark and the reset time for an interest payment of such an

obligation, which could harm or benefit the Fund, depending on the interest rate environment or other circumstances. In a rising interest rate environment, for example, a floating or variable rate obligation that does not reset immediately would prevent the Fund from taking full advantage of rising interest rates in a timely manner. However, in a declining interest rate environment, the Fund may benefit from a lag due to an obligation's interest rate payment not being immediately impacted by a decline in interest rates.

Certain floating and variable rate obligations have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the "reference rate"), such as SOFR or another rate determined using SOFR. Such a floor protects the Fund from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the obligation, and the Fund may not benefit from increasing interest rates for a significant amount of time.

Some floating or variable rate obligations or investments of the Fund may have previously referenced the London Interbank Offered Rate ("LIBOR"). As a result of benchmark reforms, publication of all LIBOR settings has ceased. Public and private sector actors have worked to establish alternative reference rates, like SOFR or Term SOFR, to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR which may affect the value, volatility, liquidity or return on certain of the Fund's floating and variable rate obligations and investments and result in costs incurred in connection with changing reference rates used for positions, closing out positions and entering into new trades. For example, LIBOR was previously calculated using the average rate at which a selection of large global banks reported they could borrow from one another and SOFR is a measure of the cost of borrowing cash overnight, collateralized by the U.S. Treasury securities, and is based on directly observable U.S. Treasury-backed repurchase transactions. Certain of the Fund's obligations or investments may have transitioned from LIBOR. The transition from LIBOR to alternative reference rates may result in operational issues for the Fund or its obligations or investments. Any pricing adjustments to the Fund's obligations or investments resulting from use of an alternative reference rate may also adversely affect the Fund's performance and/or NAV. No assurances can be given as to the impact of the LIBOR transition (and the timing of any such impact) on the Fund and its obligations and investments.

- **Foreign Risk**—When the Fund invests in foreign securities, it may be subject to risk of loss not typically associated with U.S. issuers. Loss may result because of more or less foreign government regulation; less public information; less stringent investor protections; less stringent accounting, corporate governance, financial reporting and disclosure standards; less liquid, developed or efficient trading markets; greater volatility; and less economic, political and social stability in the countries in which the Fund invests. Loss may also result from, among other things, deteriorating economic and business conditions in other countries, including the United States, regional and global conflicts, the imposition of sanctions, exchange controls (including repatriation restrictions), foreign taxes, confiscation of assets and property, trade restrictions (including tariffs), expropriations and other government restrictions by the United States and other governments, higher transaction costs, difficulty enforcing contractual obligations or from problems in share registration, settlement or custody. The type and severity of sanctions and other similar measures, including counter sanctions and other retaliatory actions, that may be imposed could vary broadly in scope, and their impact is impossible to predict. These types of measures may include, but are not limited to, banning a sanctioned country from global payment systems that facilitate cross-border payments, restricting the settlement of securities transactions by certain investors, and freezing the assets of particular countries, entities, or persons. The imposition of sanctions and other similar measures could, among other things, cause a decline in the value and/or liquidity of securities issued by the sanctioned country or companies located in or economically tied to the sanctioned country, downgrades in the credit ratings of the sanctioned country or companies located in or economically tied to the sanctioned country, devaluation of the sanctioned country's currency, and increased market volatility and disruption in the sanctioned country and throughout the world. Sanctions and other similar measures could limit or prevent the Fund from buying and selling securities (in the sanctioned country and other markets), significantly delay or prevent the settlement of securities transactions, and significantly impact the Fund's liquidity and performance. The Fund or the Investment Adviser may determine not to invest in, or may limit its overall investment in, a particular issuer, country or geographic region due to, among other things, heightened risks regarding sanctions, repatriation restrictions, confiscation of assets and property, expropriation or nationalization. Such actions may increase the Fund's tracking error relative to its Index. Geopolitical developments in certain countries in which the Fund may invest have caused, or may in the future cause, significant volatility in financial markets. For example, Brexit has resulted in ongoing market volatility and caused additional market disruption on a global basis. The UK and the EU signed the TCA, which is an agreement on the terms governing certain aspects of the EU's and UK's relationship post Brexit. However, under the TCA, many aspects of the EU-UK relationship remain subject to further negotiation. Although the full effects of Brexit are unknown at this time, Brexit may continue to result in fluctuations of exchange rates, increased illiquidity, inflation, and changes in legal and regulatory regimes to which certain of the Fund's assets are subject. These and other geopolitical developments, including ongoing regional armed conflict in Europe, could negatively impact the value of the Fund's investments.

The Fund or the Investment Adviser may determine not to invest in, or may limit its overall investment in, a particular issuer, country or geographic region due to, among other things, heightened risks regarding sanctions, repatriation restrictions, confiscation of assets and property, expropriation or nationalization. Such actions may increase the Fund's tracking error relative to its Index. The Fund will also be subject to the risk of negative foreign currency rate fluctuations, which may cause the value of securities denominated in such foreign currency (or other instruments through which the Fund has exposure to foreign currencies) to decline in value. Currency exchange rates may fluctuate significantly over short periods of time. The Fund's investments in foreign securities may also be subject to foreign currency risk, as described above, the risk of negative foreign currency rate fluctuations, which may cause the value of securities denominated in such foreign currency (or other instruments through which the Fund may have exposure to foreign currencies) to decline in value. Foreign risks will normally be greatest when the Fund invests in securities of issuers located in emerging countries.

- **Industry Concentration Risk**—In following its methodology, the Fund's Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or group of industries. To the extent that the Fund's Index concentrates in the securities of issuers in a particular industry or group of industries, the Fund also may concentrate its investments to approximately the same extent. By concentrating its investments in an industry or group of industries, the Fund may face more risks than if it were diversified broadly over numerous industries or groups of industries. If the Fund's Index is not concentrated in a particular industry or group of industries, the Fund will not concentrate in a particular industry or group of industries.

The Fund concentrates its investments in the financial services group of industries, which has historically experienced substantial price volatility. Concentrating Fund investments in a limited number of issuers conducting business in the same industry or group of industries may subject the Fund to a greater risk of loss as a result of adverse economic, business, political, environmental or other developments than if its investments were diversified across different industries.

- **Interest Rate Risk**—When interest rates increase, fixed income securities or instruments held by the Fund (which may include inflation protected securities) will generally decline in value. Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. A wide variety of market factors can cause interest rates to rise, including central bank monetary policy, rising inflation and changes in general economic conditions. Changing interest rates may have unpredictable effects on the markets, may result in heightened market volatility and may detract from Fund performance to the extent the Fund is exposed to such interest rates and/or volatility. In addition, changes in monetary policy may exacerbate the risks associated with changing interest rates. Funds with longer average portfolio durations will generally be more sensitive to changes in interest rates than funds with a shorter average portfolio duration. Fluctuations in interest rates may also affect the liquidity of fixed income securities and instruments held by the Fund.

It is difficult to predict the magnitude, timing or direction of interest rate changes and the impact these changes will have on the markets in which the Fund invests.

- **Large Shareholder Risk**—Certain large shareholders, including other funds advised by the Investment Adviser, may from time to time own a substantial amount of the Fund's Shares. In addition, a third party investor, the Investment Adviser or an affiliate of the Investment Adviser, an authorized participant, a lead market maker, or another entity (*i.e.*, a seed investor) may invest in the Fund and hold its investment solely to facilitate commencement of the Fund or to facilitate the Fund's achieving a specified size or scale. Any such investment may be held for a limited period of time. There can be no assurance that any large shareholder would not redeem its investment. Dispositions of a large number of Shares by these shareholders, which may occur rapidly or unexpectedly, may adversely affect the Fund's liquidity and net assets to the extent such transactions are executed directly with the Fund in the form of redemptions through an authorized participant, rather than executed in the secondary market. To the extent effected in cash, these redemptions may also force the Fund to sell portfolio securities when it might not otherwise do so, which may negatively impact the Fund's NAV and increase the Fund's brokerage costs. Such cash redemptions may also accelerate the realization of taxable income to shareholders, which could make investments in Shares less tax-efficient than an investment in an ETF that is able to effect redemptions in-kind. Similarly, large Fund share purchases through an authorized participant may adversely affect the performance of the Fund to the extent that the Fund is delayed in investing new cash or otherwise maintains a larger cash position than it ordinarily would. To the extent these large shareholders transact in Shares on the secondary market, such transactions may account for a large percentage of the trading volume on Cboe and may, therefore, have a material upward or downward effect on the market price of the Shares.
- **Liquidity Risk**—The Fund may invest in securities or instruments that trade in lower volumes, that are less liquid than other investments and/or that may become illiquid or less liquid in response to market developments or adverse investor perceptions. Investments that are illiquid or that trade in lower volumes may be more difficult to value. When there is no willing buyer and investments cannot be readily sold at the desired time or price, the Fund may have to accept a lower price or may not be able to sell the security or instrument at all. An inability to sell one or more portfolio positions can adversely affect the Fund's value.

Illiquidity can be caused by a drop in overall market trading volume, an inability to find a willing buyer, or legal restrictions on the securities' resale. To the extent that the traditional dealer counterparties that engage in fixed income trading do not maintain inventories of bonds (which provide an important indication of their ability to "make markets") that keep pace with the growth of the bond markets over time, relatively low levels of dealer inventories could lead to decreased liquidity and increased volatility in the fixed income markets. Additionally, market participants other than the Fund may attempt to sell fixed income holdings at the same time as the Fund, which could cause downward pricing pressure and contribute to decreased liquidity.

To the extent the Fund engages in cash redemptions, then liquidity risk may also refer to the risk that the Fund will not be able to pay redemption proceeds within the allowable time period or without significant dilution to remaining investors' interests because of unusual market conditions, an unusually high volume of redemption requests, a redemption request by a large shareholder (such as a seed investor) or other reasons. If the Fund is forced to sell securities at an unfavorable time and/or under unfavorable conditions, such sales may adversely affect the Fund's NAV and dilute remaining investors' interests.

■ **Management Risk**—A strategy used by the Investment Adviser for the Fund may fail to produce the intended results.

■ **Market Risk**—The value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions throughout the world. Price changes may be temporary or last for extended periods. The Fund's investments may be overweighted from time to time in one or more sectors or countries, which will increase the Fund's exposure to risk of loss from adverse developments affecting those sectors or countries.

Global economies and financial markets are becoming increasingly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. Furthermore, local, regional and global events such as war, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, rapid interest rate changes, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats could also adversely impact issuers, markets and economies, including in ways that cannot necessarily be foreseen. The Fund could be negatively impacted if the value of a portfolio holding were harmed by such political or economic conditions or events. In addition, governmental and quasi-governmental organizations have taken a number of unprecedented actions designed to support the markets. Such conditions, events and actions may result in greater market risk.

■ **Market Trading Risk**—The NAV of the Fund and the value of your investment may fluctuate. Market prices of Shares may fluctuate, in some cases significantly, in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Fund faces numerous market trading risks, including disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may pay more for, or receive less than, the underlying value of the Shares, respectively. The Investment Adviser cannot predict whether Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of the Fund's Index trading individually or in the aggregate at any point in time. While the creation/redemption feature is designed to make it more likely that the Fund's Shares normally will trade on stock exchanges at prices close to the Fund's next calculated NAV, exchange prices are not expected to correlate exactly with the Fund's NAV due to timing reasons, supply and demand imbalances, perception of unreliability of disclosed NAV, and other factors. Any of these factors, among others, may result in Shares trading at a significant premium or discount to NAV, which will be reflected in the intraday bid/ask spreads and/or the closing price of Shares as compared to NAV. In addition, because liquidity in certain underlying securities may fluctuate, Shares may trade at a larger premium or discount to NAV than Shares of other kinds of ETFs. Additionally, in stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings. There are various methods by which investors can purchase and sell Shares and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling Shares of the Fund.

An investor that buys or sells Shares through a broker will likely incur a brokerage commission or other charge imposed by the broker. In addition, the market price of Shares, like other exchange-traded securities, includes a "bid-ask spread" (the difference between the price at which investors are willing to buy Shares and the price at which investors are willing to sell Shares). The bid-ask spread will vary over time based on the Fund's trading volume and market liquidity and may increase as a result of a decrease in the Fund's trading volume, the spread of the Fund's underlying securities, or market liquidity. The bid-ask spread may increase significantly in times of market disruption, meaning that Shares may trade at a discount to the Fund's NAV and that discount is likely to be greatest during significant market volatility. During such periods, you may be unable to sell your Shares or may incur significant losses if you sell your Shares.

Shares of the Fund, like other publicly-traded securities, may be sold short. Shares are therefore subject to the risk of price decreases and increased volatility associated with being sold short.

■ **Mortgage-Backed and Other Asset-Backed Securities Risk**—Mortgage-related and other asset-backed securities are subject to credit/default, interest rate and certain additional risks. Generally, rising interest rates tend to extend the duration of fixed rate

mortgage-backed securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if the Fund holds mortgage-backed securities, it may exhibit additional volatility. This is known as extension risk. In addition, adjustable and fixed rate mortgage-backed securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Fund because the Fund may have to reinvest that money at the lower prevailing interest rates. Due to these risks, asset-backed securities may become more volatile in certain interest rate environments.

The Fund's investments in other asset-backed securities are subject to risks similar to those associated with mortgage-backed securities, as well as additional risks associated with the nature of the assets and the servicing of those assets. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk.

The Fund may invest in mortgage-backed securities issued by the U.S. Government (see "U.S. Government Securities Risk"). To the extent that the Fund invests in mortgage-backed securities offered by non-governmental issuers, such as commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers, the Fund may be subject to additional risks. Timely payment of interest and principal of non-governmental issuers are supported by various forms of private insurance or guarantees, including individual loan, title, pool and hazard insurance purchased by the issuer. There can be no assurance that the private insurers can meet their obligations under the policies. An unexpectedly high rate of defaults on the mortgages held by a mortgage pool may adversely affect the value of a mortgage-backed security and could result in losses to the Fund. The risk of such defaults is generally higher in the case of mortgage pools that include subprime mortgages or during periods of rising interest rates. Subprime mortgages refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their mortgages.

The values of, and income generated by, commercial mortgage-backed securities ("CMBS") may be adversely affected by changing interest rates and other developments impacting the commercial real estate market, such as population shifts and other demographic changes, increasing vacancies (potentially for extended periods) and reduced demand for commercial and office space as well as maintenance or tenant improvement costs and costs to convert properties for other uses. These developments could result from, among other things, changing tastes and preferences (such as for remote work arrangements) as well as cultural, technological, global or local economic and market developments. In addition, changing interest rate environments and associated changes in lending standards and higher refinancing rates may adversely affect the commercial real estate and CMBS markets. The occurrence of any of the foregoing developments would likely increase default risk for the properties and loans underlying these investments as well as impact the value of, and income generated by, these investments. These developments could also result in reduced liquidity for CMBS and other real estate-related investments.

- **Municipal Securities Risk**—Municipal securities are subject to call/prepayment risk, credit/default risk, extension risk and certain additional risks. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the debt securities of similar projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal securities (such as general obligation bonds, private activity bonds and moral obligation bonds). While interest earned on municipal securities is generally not subject to federal tax, any interest earned on taxable municipal securities is fully taxable at the federal level and may be subject to tax at the state level. Specific risks are associated with different types of municipal securities. Certain of the municipalities in which the Fund may invest may experience significant financial difficulties, which may lead to bankruptcy or default. With respect to general obligation bonds, the full faith, credit and taxing power of the municipality that issues a general obligation bond secures payment of interest and repayment of principal. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. Certain of the municipalities in which the Fund invests may experience significant financial difficulties, which may lead to bankruptcy or default.

With respect to revenue bonds, payments of interest and principal are made only from the revenues generated by a particular facility, class of facilities or the proceeds of a special tax, or other revenue source, and depends on the money earned by that source. Private activity bonds are issued by municipalities and other public authorities to finance development of industrial facilities for use by a private enterprise. The private enterprise pays the principal and interest on the bond, and the issuer does not pledge its full faith, credit and taxing power for repayment. If the private enterprise defaults on its payments, the Fund may not receive any income or get its money back from the investment. Moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality. Municipal notes are shorter term municipal debt obligations. They may provide interim financing in anticipation of, and are secured by, tax collection, bond sales or revenue receipts. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money. In a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. The issuer will generally appropriate municipal

funds for that purpose, but is not obligated to do so. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property. However, if the issuer does not fulfill its payment obligation it may be difficult to sell the property and the proceeds of a sale may not cover the Fund's loss.

In addition, third party credit quality or liquidity enhancements are frequently a characteristic of the structure of municipal securities purchased by the Fund. Problems encountered by such third parties (such as municipal security insurers or banks issuing a liquidity enhancement facility), including credit rating downgrades or changes in the market's perception of creditworthiness, may negatively impact a municipal security even though the related municipal issuer is not experiencing problems.

- **Secondary Listing Risk**—The Fund's Shares may be listed or traded on U.S. and non-U.S. stock exchanges other than the U.S. stock exchange where the Fund's primary listing is maintained. There can be no assurance that the Fund's Shares will continue to trade on any such stock exchange or in any market or that the Fund's Shares will continue to meet the requirements for listing or trading on any exchange or in any market. The Fund's Shares may be less actively traded in certain markets than in others, and investors are subject to the execution and settlement risks and market standards of the market where they or their broker direct their trades for execution. Certain information available to investors who trade Fund Shares on a U.S. stock exchange during regular U.S. market hours may not be available to investors who trade in other markets, which may result in secondary market prices in such markets being less efficient. Shares of the Fund may trade in the secondary market outside of the trading hours of the Fund's primary exchange. At such times, Shares may trade with more significant premiums or discounts than might be experienced otherwise.
- **Sovereign and Quasi-Sovereign Default Risk**—Certain Funds invest in securities issued by or guaranteed by non-U.S. sovereign governments (known as sovereign debt securities) and in securities issued by entities that are owned or guaranteed by non-U.S. sovereign governments (known as quasi-sovereign debt securities). An issuer of sovereign or quasi-sovereign debt held by a Fund, or the governmental authorities that control the repayment of the debt, may be unable or unwilling to repay the principal or interest when due, and a Fund may have limited recourse in the event of a default. This may result from political or social factors, the general economic environment of a country or levels of borrowing rates, foreign debt, or foreign currency exchange rates. Quasi-sovereign debt obligations are typically less liquid and less standardized than sovereign debt obligations.
- **Economic Risk**—The risks associated with the general economic environment of a country. These can encompass, among other things, low quality and growth rate of GDP, high inflation or deflation, high government deficits as a percentage of GDP, weak financial sector, overvalued exchange rate, and high current account deficits as a percentage of GDP.
- **Political Risk**—The risks associated with the general political and social environment of a country. These factors may include among other things government instability, poor socioeconomic conditions, corruption, lack of law and order, lack of democratic accountability, poor quality of the bureaucracy, internal and external conflict, the imposition of international sanctions, and religious and ethnic tensions. High political risk can impede the economic welfare of a country.
- **Repayment Risk**—A country may be unable to pay its external debt obligations in the immediate future. Repayment risk factors may include but are not limited to high borrowing rates (which may increase in market environments where interest rates are rising), high foreign debt as a percentage of GDP, high foreign debt service as a percentage of exports, low foreign exchange reserves as a percentage of short-term debt or exports, and an unsustainable exchange rate structure.
- **Trading Issues Risk**—Trading in Shares on Cboe may be halted due to market conditions or for reasons that, in the view of the exchange, make trading in Shares inadvisable. In addition, trading in Shares on Cboe is subject to trading halts caused by extraordinary market volatility pursuant to Cboe's "circuit breaker" rules. If a trading halt or unanticipated closing of the exchange occurs, a shareholder may be unable to purchase or sell Shares. There can be no assurance that the requirements of Cboe necessary to maintain the listing of the Fund, including the required number of shareholders, will continue to be met or will remain unchanged, which may cause the Fund to be delisted from Cboe. If the Fund were delisted from Cboe, the value of the Fund may decline and performance may be negatively impacted. Any resulting liquidation of the Fund may cause the Fund to incur elevated transaction costs and result in negative tax consequences for its shareholders.
- **U.S. Government Securities Risk**—The U.S. government may not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. U.S. Government Securities issued by those agencies, instrumentalities, and sponsored enterprises, including those issued by Fannie Mae, Freddie Mac and the Federal Home Loan Banks, are neither issued nor guaranteed by the U.S. Treasury and, therefore, are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by the Fund may greatly exceed their current resources, including any legal right to support from the U.S. Treasury. It is possible that issuers of U.S. Government Securities will not have the funds to meet their payment obligations in the future. Fannie Mae and Freddie Mac have been operating under conservatorship, with the Federal Housing Finance Agency ("FHFA") acting as their conservator, since September 2008. The entities are dependent upon the continued support of the U.S. Department of the Treasury and FHFA in order

to continue their business operations. These factors, among others, could affect the future status and role of Fannie Mae and Freddie Mac and the value of their securities and the securities which they guarantee. Additionally, the U.S. government and its agencies and instrumentalities do not guarantee the market values of their securities, which may fluctuate. U.S. Government Securities include U.S. Treasury Securities.

- **U.S. Treasury Securities Risk**—A security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed only as to the timely payment of interest and principal when held to maturity, but the market prices for such securities are not guaranteed and will fluctuate. Because U.S. Treasury Securities trade actively outside the United States, their prices may rise and fall as changes in global economic conditions affect the demand for these securities. In addition, changes in the credit rating or financial condition of the U.S. government may cause the value of U.S. Treasury Securities to decline.
- **Valuation Risk**—The sale price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Fund's Index, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. Because non-U.S. exchanges may be open on days when the Fund does not price its Shares, the value of foreign securities or assets in the Fund's portfolio may change on days when investors will not be able to purchase or sell the Fund's Shares. The Fund relies on various sources to calculate its NAV. The information may be provided by third parties that are believed to be reliable, but the information may not be accurate due to errors by such pricing sources, technological issues or otherwise. NAV calculation may also be impacted by operational risks arising from factors such as failures in systems and technology.

More information about the Fund's portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Service Providers

INVESTMENT ADVISER

Investment Adviser	Fund
Goldman Sachs Asset Management, L.P. ("GSAM") 200 West Street New York, NY 10282	Goldman Sachs Access Ultra Short Bond ETF

GSAM has been registered as an investment adviser with the SEC since 1990 and is an indirect, wholly-owned subsidiary of The Goldman Sachs Group, Inc. and an affiliate of Goldman Sachs & Co. LLC ("Goldman Sachs"). Founded in 1869, The Goldman Sachs Group, Inc. is a publicly-held financial holding company and a leading global investment banking, securities and investment management firm. As of September 30, 2024, GSAM, including its investment advisory affiliates, had assets under supervision of approximately \$2.79 trillion.

The Investment Adviser is responsible for the day-to-day management of the Fund and places purchase and sale orders for the Fund's portfolio transactions in U.S. and foreign markets. As permitted by applicable law, these orders may be directed to any executing brokers, dealers, futures commission merchants ("FCMs") or other counterparties, including Goldman Sachs and its affiliates. While the Investment Adviser is ultimately responsible for the management of the Fund, it is able to draw upon the research and expertise of its asset management affiliates with respect to managing certain portfolio securities. In addition, the Investment Adviser has access to proprietary tools developed by Goldman Sachs (subject to legal, internal, regulatory and Chinese wall restrictions), and will apply quantitative and qualitative analysis in determining the appropriate allocations among categories of issuers and types of securities.

The Investment Adviser also performs the following additional services for the Fund, to the extent such services are not required to be performed by others pursuant to the fund administration and accounting agreement, the custodian agreement, the transfer agency agreement, distribution agreement or such other agreements with service providers to the Fund that the Board has approved:

- Supervises non-advisory operations of the Fund, including oversight of vendors hired by the Fund, oversight of Fund liquidity and risk management, oversight of regulatory inquiries and requests with respect to the Fund made to the Investment Adviser, valuation and accounting oversight and oversight of ongoing compliance with federal and state securities laws, tax regulations, and other applicable law
- Provides personnel to perform such executive, administrative and clerical services as are reasonably necessary to provide effective administration of the Fund
- Arranges for: (a) the preparation of all required tax returns, (b) the preparation and submission of reports to existing shareholders, (c) the periodic updating of prospectuses and statements of additional information and (d) the preparation of reports to be filed with the SEC and other regulatory authorities
- Maintains the records of the Fund
- Provides office space and necessary office equipment and services for the Investment Adviser
- Markets the Fund

An investment in the Fund may be negatively impacted because of the operational risks arising from factors such as processing errors and human errors, inadequate or failed internal or external processes, failures in systems and technology, changes in personnel, and errors caused by third-party service providers or trading counterparties. The use of certain investment strategies that involve manual or additional processing, such as over-the-counter derivatives, increases these risks. Although the Fund attempts to minimize such failures through controls and oversight, it is not possible to identify all of the operational risks that may affect the Fund or to develop processes and controls that completely eliminate or mitigate the occurrence of such failures. The Fund and its shareholders could be negatively impacted as a result.

GSAM may manage other funds, accounts, additional pooled vehicles and/or separate accounts that have similar investment strategies to those of the Fund. These funds, pooled vehicles or accounts may perform differently than the Fund despite their similar strategies. Because the pooled vehicles may not be registered under the Investment Company Act, they are subject to fewer regulatory restraints than the Fund (e.g., fewer trading constraints) and may employ strategies that are not subject to the same constraints as the Fund.

GSAM and/or its affiliates expect to make payments to one or more investors that contribute seed capital to the Fund. Such payments may continue for a specified period of time and/or until a specified dollar amount is reached. Those payments will be made from the assets of GSAM and/or such affiliates (and not the Fund). Seed investors may contribute all or a majority of the assets in the Fund. There is a risk that such seed investors may redeem their investments in the Fund. As with redemptions by other large shareholders, such redemptions could have a significant negative impact on the Fund.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold Shares of the Fund. Goldman Sachs and its affiliates reserve the right to redeem or sell at any time some or all of the Shares acquired for their own accounts.

MANAGEMENT FEE AND OTHER EXPENSES

Pursuant to the Fund's Management Agreement, as compensation for its services to the Fund, the Investment Adviser is entitled to a management fee, computed daily and payable monthly, at an annual rate listed below (as a percentage of the Fund's average daily net assets). Under the Management Agreement, the Investment Adviser is responsible for substantially all the expenses of the Fund, excluding payments under the Fund's 12b-1 plan (if any), interest expenses, taxes, acquired fund fees and expenses, brokerage fees, costs of holding shareholder meetings and litigation, indemnification and extraordinary expenses.

	Fee as a Percentage of Average Daily Net Assets
Goldman Sachs Access Ultra Short Bond ETF	0.20%

For the fiscal year ended August 31, 2024, the effective net unitary management fee rate (as a percentage of the Fund's average daily net assets) was 0.16%.

The Investment Adviser has agreed to waive a portion of its management fee in order to achieve an effective net management fee rate of 0.16% as an annual percentage rate of the average daily net assets of the Fund. This arrangement will remain in effect through at least December 29, 2025 and prior to such dates the Investment Adviser may not terminate the arrangements without the approval of the Board of Trustees.

In addition to the management fee waivers described above, the Investment Adviser may waive an additional portion of its management fee, including fees earned as the Investment Adviser to any of the affiliated funds in which the Fund invests, from time to time, and may discontinue or modify any such waivers in the future, consistent with the terms of any fee waiver arrangements that may be in place. The Investment Adviser may also decide to waive a portion of its management fee to the extent necessary to avoid a negative yield on a given day. Any such waiver would be voluntary and may be terminated at any time.

A discussion regarding the basis for the Board of Trustees' approval of the Management Agreement for the Fund is available in the Fund's Form N-CSR dated August 31, 2024.

FUND MANAGERS

The individuals jointly and primarily responsible for the day-to-day management of the Fund are listed below. The Fund's portfolio managers' individual responsibilities may differ and may include, among other things, oversight and maintenance of allocations to index securities, selecting the composition of creation and redemption baskets, general oversight of the implementation processes and management of the Fund's portfolio. The portfolio managers' individual responsibilities may also include security selection, asset allocation and risk budgeting.

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Todd Henry Vice President	Portfolio Manager— Goldman Sachs Access Ultra Short Bond ETF	Since 2021	Mr. Henry joined the Investment Adviser in 2012. He is a portfolio manager on the Fixed Income Team.
David Westbrook Vice President	Portfolio Manager—Goldman Sachs Access Ultra Short Bond ETF	Since 2019	Mr. Westbrook joined the Investment Adviser in 2012. He is a portfolio manager on the U.S. Fixed Income Team.

For information about portfolio manager compensation, other accounts managed by a portfolio manager and portfolio manager ownership of securities in the Fund, see the SAI.

DISTRIBUTOR

ALPS Distributors, Inc., 1290 Broadway, Suite 1000, Denver, Colorado 80203, serves as the exclusive distributor of Creation Units of Shares of the Fund pursuant to a “best efforts” arrangement as provided by a distribution agreement with the Trust on behalf of the Fund. Shares of the Fund are offered and sold on a continuous basis by the Distributor, acting as agent. The Distributor does not maintain a secondary market in the Fund’s Shares.

TRANSFER AGENT, CUSTODIAN AND PROVIDER OF ADMINISTRATIVE SERVICES

The Bank of New York Mellon (“BNYM”), 240 Greenwich Street, New York, New York 10286, serves as the Trust’s transfer and dividend disbursing agent. Under its transfer agency agreement with the Trust, BNYM has undertaken with the Trust to provide the following services with respect to the Fund: (i) perform and facilitate the performance of purchases and redemptions of Creation Units, (ii) prepare and transmit by means of Depository Trust Company’s (“DTC”) book-entry system payments for dividends and distributions on or with respect to the Shares declared by the Trust on behalf of the Fund, as applicable, (iii) prepare and deliver reports, information and documents as specified in the transfer agency agreement, (iv) perform the customary services of a transfer agent and dividend disbursing agent, and (v) render certain other miscellaneous services as specified in the transfer agency agreement or as otherwise agreed upon.

BNYM is the custodian of the Trust’s portfolio securities and cash. The custodian of the Trust may change from time to time. BNYM also maintains the Trust’s accounting records. BNYM may appoint domestic and foreign sub-custodians and use depositories from time to time to hold securities and other instruments purchased by the Trust in foreign countries and to hold cash and currencies for the Trust.

BNYM provides administrative services pursuant to a fund administration agreement with the Trust (the “Fund Administration and Accounting Agreement”) pursuant to which BNYM provides certain services, including, among others, (i) preparation of certain shareholder reports and communications; (ii) preparation of certain reports and filings with the SEC; (iii) certain NAV computation services; and (iv) such other services for the Trust as may be mutually agreed upon between the Trust and BNYM. For its services under the Fund Administration and Accounting Agreement, BNYM receives such fees based on a stated percentage of net assets as are agreed upon from time to time between the parties. In addition, BNYM is reimbursed for reasonable out-of-pocket expenses incurred in connection with the Fund Administration and Accounting Agreement. In addition, an affiliate of BNYM will also provide certain other services for the Trust, including, (i) providing foreign exchange transaction services and (ii) executing trades in connection with certain creation and redemption transactions effected partially in cash. For these services, the BNYM affiliate will receive compensation based on levels that are negotiated with the Trust and/or the Investment Adviser. BNYM also provides certain middle office services to GSAM pursuant to a service agreement.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs will present conflicts of interest with respect to the Fund and will, under certain circumstances, limit the Fund’s investment activities. Goldman Sachs is a worldwide, full service investment banking, broker dealer, asset management and financial services organization and a major participant in global financial markets that provides a wide range of financial services to a substantial and diversified client base that includes corporations, financial institutions, governments and individuals. As such, it acts as a broker-dealer, investment adviser, investment banker, underwriter, research provider, administrator, financier, adviser, market maker, trader, prime broker, derivatives dealer, clearing agent, lender, counterparty, agent, principal, distributor, investor or in other commercial capacities for accounts or companies (including Fund portfolio companies) or affiliated or unaffiliated investment funds (including pooled investment vehicles and private funds) in which one or more accounts, including the Fund, invest. In those and other capacities, Goldman Sachs and its affiliates advise and deal with clients and third parties in all markets and transactions and purchase, sell, hold and recommend a broad array of investments, including securities, derivatives, loans, commodities, currencies, credit default swaps, indices, baskets and other financial instruments and products for their own accounts or for the accounts of their customers and have other direct and indirect interests in the global fixed income, currency, commodity, equities, bank loans and other markets in which the Fund directly and indirectly invests. Thus, it is expected that the Fund will have multiple business relationships with and will invest in, engage in transactions with, make voting decisions with respect to, or obtain services from entities for which Goldman Sachs and its affiliates perform or seek to perform investment banking or other services. The Investment Adviser and/or certain of its affiliates are the managers of the Goldman Sachs Funds. The Investment Adviser and its affiliates earn fees from this and other relationships with the Fund. Although management fees paid by the Fund to the Investment Adviser and certain other fees paid to the Investment Adviser’s affiliates are based on asset levels, the fees are not directly contingent on Fund performance, and the Investment Adviser and its affiliates will still receive significant compensation from the Fund even if

shareholders lose money. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives, principal investment strategies and/or policies similar or substantially similar to those of the Fund and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Fund. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Fund. The results of the Fund's investment activities, therefore, will likely differ from those of Goldman Sachs, its affiliates, and other accounts managed by Goldman Sachs, and it is possible that the Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Fund may enter into transactions in which Goldman Sachs and its affiliates or their other clients have an adverse interest. For example, the Fund may take a long position in a security at the same time that Goldman Sachs and its affiliates or other accounts managed by the Investment Adviser or its affiliates take a short position in the same security (or vice versa). These and other transactions undertaken by Goldman Sachs, its affiliates or Goldman Sachs-advised clients may, individually or in the aggregate, adversely impact the Fund. In some cases, such adverse impacts may result from differences in the timing of transactions by Accounts relative to when the Fund executes transactions in the same securities. Transactions by one or more Goldman Sachs-advised clients or the Investment Adviser may have the effect of diluting or otherwise disadvantaging the values, prices or investment strategies of the Fund. The Fund's activities will, under certain circumstances, be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions. As a global financial services firm, Goldman Sachs and its affiliates also provide a wide range of investment banking and financial services to issuers of securities and investors in securities. Goldman Sachs, its affiliates and others associated with it are expected to create markets or specialize in, have positions in and/or effect transactions in, securities of issuers held by the Fund, and will likely also perform or seek to perform investment banking and financial services for one or more of those issuers. Goldman Sachs and its affiliates are expected to have business relationships with and purchase or distribute or sell services or products from or to distributors, consultants or others who recommend the Fund or who engage in transactions with or for the Fund.

For more information about conflicts of interest, see the section titled "Potential Conflicts of Interest" in the SAI.

The Fund will, from time to time, make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Fund's portfolio investment transactions, in accordance with applicable law.

Distributions

The Fund pays distributions from its investment income and from net realized capital gains.

Distributions from net investment income, if any, are normally declared and paid monthly for the Fund, and distributions from net capital gains, if any, are normally declared and paid annually for the Fund. In addition, the Fund may occasionally make a distribution at a time when it is not normally made.

In addition to the net investment income dividends paid monthly, the Fund may also earn additional net investment income throughout the year. Any additional net investment income will be distributed annually as a declared event and paid to shareholders of record for such events.

From time to time a portion of the Fund's distributions may constitute a return of capital for tax purposes, and/or may include amounts in excess of the Fund's net investment income for the period calculated in accordance with generally accepted accounting principles ("GAAP").

Dividends and other distributions on Shares of the Fund are distributed on a pro rata basis to beneficial owners of such Shares. Dividend payments are made through Depository Trust Company ("DTC") Participants and Indirect Participants (each as described in the Book Entry section below) to beneficial owners then of record with proceeds received from the Fund.

No dividend reinvestment service is provided by the Fund. Broker-dealers may make available the DTC book-entry dividend reinvestment service for use by beneficial owners of the Fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole Shares of the Fund purchased in the secondary market.

Shareholder Guide

BUYING AND SELLING SHARES

Shares of the Fund may be acquired or redeemed directly from the Fund at NAV only in Creation Units or multiples thereof, as discussed in the Creations and Redemptions section of the Prospectus. Only an Authorized Participant (as defined in the Creations and Redemptions section below) may engage in creation or redemption transactions directly with the Fund. Once created, Shares of the Fund generally trade in the secondary market in amounts less than a Creation Unit.

Shares of the Fund are listed for trading on a national securities exchange during the trading day. Shares can be bought and sold throughout the trading day at market price like shares of other publicly traded companies. However, there can be no guarantee that an active trading market will develop or be maintained, or that the Fund Shares listing will continue or remain unchanged. The Trust does not impose any minimum investment for Shares of the Fund purchased on an exchange. Buying or selling the Fund's Shares involves certain costs that apply to all securities transactions. When buying or selling Shares of the Fund through a financial intermediary, you may incur a brokerage commission or other charges determined by your financial intermediary. Due to these brokerage costs, if any, frequent trading may detract significantly from investment returns. In addition, you may also incur the cost of the spread (the difference between the bid price and the ask price). The commission is frequently a fixed amount and may be a significant cost for investors seeking to buy or sell small amounts of Shares. The spread varies over time for Shares of the Fund based on its trading volume and market liquidity, and is generally less if the Fund has more trading volume and market liquidity and more if the Fund has less trading volume and market liquidity.

The Fund's primary listing exchange is Cboe. Cboe is open for trading Monday through Friday and are closed on the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

A "business day" with respect to the Fund is each day the New York Stock Exchange, Cboe, and the Trust are open and includes any day that the Fund is required to be open under Section 22(e) of the Investment Company Act. Orders from Authorized Participants to create or redeem Creation Units will only be accepted on a business day. On days when Cboe closes earlier than normal, the Fund may require orders to create or redeem Creation Units to be placed earlier in the day. See the SAI for more information.

The Trust's Board of Trustees has not adopted a policy of monitoring for frequent purchases and redemptions of Fund Shares ("frequent trading") that appear to attempt to take advantage of potential arbitrage opportunities presented by a lag between a change in the value of the Fund's portfolio securities after the close of the primary markets for the Fund's portfolio securities and the reflection of that change in the Fund's NAV ("market timing"). The Trust believes this is appropriate because ETFs, such as the Fund, are intended to be attractive to arbitrageurs, as trading activity is critical to ensuring that the market price of Fund Shares remains at or close to NAV. Since the Fund issues and redeems Creation Units at NAV plus applicable transaction fees, and the Fund's Shares may be purchased and sold on Cboe at prevailing market prices, the risks of frequent trading are limited.

Section 12(d)(1) of the Investment Company Act restricts investments by registered investment companies and companies relying on Sections 3(c)(1) or 3(c)(7) of the Investment Company Act in the securities of other investment companies. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions, including that such investment companies enter into an agreement with the Trust.

The Fund and the Distributor will have the sole right to accept orders to purchase Shares and reserve the right to reject any purchase order in whole or in part.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

GSAM and/or the Distributor (upon direction of the Fund) may make payments to broker-dealers, registered investment advisers or other financial intermediaries (each, a "Financial Intermediary") related to activities that are designed to make registered representatives, other professionals and individual investors more knowledgeable about the Fund or for other activities, such as participation in marketing activities and presentations, educational training programs, the support or purchase of technology platforms/software and/or reporting systems. GSAM and/or the Distributor (upon direction of the Fund) may also make payments to Financial Intermediaries for certain printing, publishing and mailing costs associated with the Fund or materials relating to exchange-traded funds in general and/or for the provision of analytical or other data to GSAM or its affiliates relating to marketing of the Fund and/or sale of shares of the Fund and other Goldman Sachs Funds. In addition, GSAM and/or the Distributor may make payments to Financial Intermediaries that make Fund Shares available to their clients or for otherwise promoting the Fund, including through provision of consultative services to GSAM or its affiliates relating to marketing of the Fund and/or sale of Fund Shares. Such payments, which may be significant to the Financial Intermediary, are not made by the Fund. Rather, such payments are made by GSAM and/or the Distributor from their own resources, which may come directly or indirectly in part from management fees paid by the Fund. Payments

of this type are sometimes referred to as marketing support or revenue-sharing payments. A Financial Intermediary may make decisions about which investment options it recommends or makes available, or the level of services provided, to its customers based on the marketing support payments it is eligible to receive. Therefore, such payments to a Financial Intermediary create conflicts of interest between the Financial Intermediary and its customers and may cause the Financial Intermediary to recommend the Fund over another investment. More information regarding these payments is contained in the SAI. A shareholder should contact his or her Financial Intermediary's salesperson or other investment professional for more information regarding any such payments the Financial Intermediary firm may receive from GSAM and/or the Distributor.

NET ASSET VALUE

The Fund generally calculates its NAV as follows:

$$\text{NAV} = \frac{\begin{array}{l} \text{(Value of Assets of the Fund)} \\ - \text{(Liabilities of the Fund)} \end{array}}{\text{Number of Outstanding Shares of the Fund}}$$

The Fund's NAV per share is generally calculated by the Fund's provider of administrative services on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern time) or such other times as the New York Stock Exchange or NASDAQ market may officially close. The Fund's investments for which market quotations are readily available are valued at market value on the basis of quotations provided by pricing sources. If accurate quotations are not readily available, if the Fund's provider of administrative services is unable for other reasons to facilitate pricing of individual securities or calculate the Fund's NAV, or if the Investment Adviser believes that such quotations do not accurately reflect fair value, the fair value of the Fund's investments may be determined in good faith under valuation procedures approved by the Board of Trustees. Thus, such pricing may be based on subjective judgments and it is possible that the prices resulting from such valuation procedures may differ materially from the value realized on a sale. Cases where there is no clear indication of the value of the Fund's investments include, among others, situations where a security or other asset or liability does not have a price source or a price is unavailable.

Equity securities listed on an exchange are generally valued at the last available sale price on the exchange on which they are principally traded.

Fixed income securities are generally valued on the basis of prices (including evaluated prices) and quotations provided by pricing services or securities dealers. Pricing services may use matrix pricing or valuation models, which utilize certain inputs and assumptions, including, but not limited to, yield or price with respect to comparable fixed income securities, to determine current value. Pricing services generally value fixed income securities assuming orderly transactions of an institutional round lot size, but the Fund may hold or transact in such securities in smaller odd lot sizes. Odd lots may trade at lower prices than institutional round lots.

Investments in other open-end registered investment companies (if any), excluding investments in ETFs, are valued based on the NAV of those open-end registered investment companies (which may use fair value pricing as discussed in their prospectuses). Investments in ETFs will generally be valued at the last sale price or official closing price on the exchange on which they are principally traded.

In addition, the Investment Adviser, consistent with its procedures and applicable regulatory guidance, may (but need not) determine to make an adjustment to the previous closing prices of securities in light of significant events, to reflect what it believes to be the fair value of the securities at the time of determining the Fund's NAV. Significant events that could affect a large number of securities in a particular market may include, but are not limited to: situations relating to one or more single issuers in a market sector; significant fluctuations in U.S. or foreign markets; market dislocations; market disruptions or unscheduled market closings; equipment failures; natural or man-made disasters or acts of God; armed conflicts; governmental actions or other developments; as well as the same or similar events which may affect specific issuers or the securities markets even though not tied directly to the securities markets. Other significant events that could relate to a single issuer may include, but are not limited to: corporate actions such as reorganizations, mergers and buy-outs; corporate announcements, including those relating to earnings, products and regulatory news; significant litigation; ratings downgrades; bankruptcies; and trading limits or suspensions.

Fair valuation involves the risk that the values used by the Fund to price its investments may be different from those used by other investment companies and investors to price the same investments.

Foreign securities may trade in their local markets on days the Fund is closed. As a result, if the Fund holds foreign securities, its NAV may be impacted on days when investors may not purchase or sell Fund Shares on the secondary market or purchase or redeem Creation Units through the Fund.

The Fund relies on various sources to calculate its NAV. The ability of the Fund's provider of administrative services to calculate the NAV per share of the Fund is subject to operational risks associated with processing or human errors, systems or technology failures, cyber attacks and errors caused by third party service providers, data sources, or trading counterparties. Such failures may result in delays in the calculation of the Fund's NAV and/or the inability to calculate NAV over extended time periods. The Fund may be unable

to recover any losses associated with such failures. In addition, if the third party service providers and/or data sources upon which the Fund directly or indirectly relies to calculate its NAV or price individual securities are unavailable or otherwise unable to calculate the NAV correctly, it may be necessary for alternative procedures to be utilized to price the securities at the time of determining the Fund's NAV.

BOOK ENTRY

DTC serves as securities depository for the Shares. (The Shares may be held only in book-entry form; stock certificates will not be issued.) DTC, or its nominee, is the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or its participants (described below). Beneficial owners of Shares are not entitled to have Shares registered in their names, will not receive or be entitled to receive physical delivery of certificates in definitive form and are not considered the registered holder thereof. Accordingly, to exercise any rights of a holder of Shares, each beneficial owner must rely on the procedures of: (i) DTC; (ii) "DTC Participants," i.e., securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of whom (and/or their representatives) own DTC; and (iii) "Indirect Participants," i.e., brokers, dealers, banks and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly, through which such beneficial owner holds its interests. The Trust understands that under existing industry practice, in the event the Trust requests any action of holders of Shares, or a beneficial owner desires to take any action that DTC, as the record owner of all outstanding Shares, is entitled to take, DTC would authorize the DTC Participants to take such action and that the DTC Participants would authorize the Indirect Participants and beneficial owners acting through such DTC Participants to take such action and would otherwise act upon the instructions of beneficial owners owning through them. As described above, the Trust recognizes DTC or its nominee as the owner of all Shares for all purposes.

CREATIONS AND REDEMPTIONS

Prior to trading in the secondary market, Shares of the Fund are "created" at NAV by market makers, large investors and institutions only in block-size Creation Units or multiples thereof. Each "creator" or "Authorized Participant" enters into an authorized participant agreement with the Fund's Distributor.

A creation transaction, which is subject to acceptance by BNYM, as the Trust's transfer agent, generally takes place when an Authorized Participant deposits into the Fund a designated portfolio of securities (including any portion of such securities for which cash may be substituted) and/or a specified amount of cash in exchange for a specified number of Creation Units.

Similarly, Shares can be redeemed only in Creation Units, generally for a designated portfolio of securities (including any portion of such securities for which cash may be substituted) held by the Fund and/or a specified amount of cash. Except when aggregated in Creation Units, Shares are not redeemable by the Fund.

The prices at which creations and redemptions occur are based on the next calculation of NAV after a creation or redemption order is received in an acceptable form under the authorized participant agreement.

Please note the following with respect to the price at which transactions are processed:

- NAV per Share is generally calculated by the Fund's fund accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern time) or such other times as the New York Stock Exchange or NASDAQ market may officially close. Fund Shares will generally not be priced on any day the New York Stock Exchange is closed.
- The Trust reserves the right to reprocess creation and redemption transactions that were processed at a NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) Authorized Participants accordingly based on the official closing NAV, as adjusted.
- The Trust reserves the right to advance the time by which creation and redemption orders must be received for same business day credit, as otherwise permitted by the SEC.
- Consistent with industry practice, investment transactions not settling on the same day are recorded and factored into the Fund's NAV on the business day following trade date (T+1). The use of T+1 accounting generally does not, but may, result in a NAV that differs materially from the NAV that would result if all transactions were reflected on their trade dates.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than its regularly scheduled closing time. In the event the New York Stock Exchange does not open for business, the Trust may, but is not required to, open the Fund for creation and redemption transactions if the Federal Reserve wire payment system is open. To learn whether the Fund is open for business during this situation, please call the appropriate phone number located on the back cover of the Prospectus.

Only an Authorized Participant may create or redeem Creation Units directly with the Fund.

In the event of a system failure or other interruption, including disruptions at market makers or Authorized Participants, orders to purchase or redeem Creation Units either may not be executed according to the Fund's instructions or may not be executed at all, or the Fund may not be able to place or change orders.

In connection with certain cash creations, the Investment Adviser may provide the creating Authorized Participants with information regarding securities that the Fund would be willing to purchase with the proceeds of the cash creation, which may not be the current holdings of the Fund. In certain cases, the Fund may purchase such securities from an Authorized Participant that has submitted a creation order. Regardless of whether the Fund purchases securities with the proceeds of a cash creation order from the creating Authorized Participant, the Authorized Participant may be assessed a variable charge to compensate the Fund for the costs associated with purchasing the applicable securities, as described in the SAI. For more information, see the SAI.

To the extent the Fund engages in in-kind transactions, the Fund intends to comply with the U.S. federal securities laws in accepting securities for deposit and satisfying redemptions with redemption securities by, among other means, assuring that any securities accepted for deposit and any securities used to satisfy redemption requests will be sold in transactions that would be exempt from registration under the Securities Act of 1933, as amended (the "Securities Act"). Further, an Authorized Participant that is not a "qualified institutional buyer," as such term is defined under Rule 144A of the Securities Act, will not be able to receive restricted securities eligible for resale under Rule 144A.

Creations and redemptions must be made through a firm that is either a member of the Continuous Net Settlement System of the National Securities Clearing Corporation or a DTC Participant and has executed an agreement with the Distributor with respect to creations and redemptions of Creation Unit aggregations. Information about the procedures regarding creation and redemption of Creation Units (including the cut-off times for receipt of creation and redemption orders) and the applicable transaction fees is included in the Fund's SAI.

Taxation

As with any investment, you should consider how your investment in the Fund will be taxed. The tax information below is provided as general information. More tax information is available in the SAI. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Fund. Except as otherwise noted, the tax information provided assumes that you are a U.S. citizen or resident.

Unless your investment is through an IRA or other tax-advantaged account, you should carefully consider the possible tax consequences of Fund distributions and the sale of your Fund Shares.

DISTRIBUTIONS

The Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Fund are generally subject to federal income tax, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund Shares or receive them in cash. For federal tax purposes, the Fund's distributions attributable to net investment income and short-term capital gains are taxable to you as ordinary income while distributions of long-term capital gains, if any, are taxable to you as long-term capital gains, no matter how long you have owned your Fund Shares.

Under current provisions of the Code, the maximum individual rate applicable to long-term capital gains is generally either 15% or 20%, depending on whether the individual's income exceeds certain threshold amounts. The preferential rate described above also applies to certain qualifying dividend income, but Fund distributions will generally not qualify for that favorable treatment and also will generally not qualify for the corporate dividends received deduction because the Fund will be earning interest income rather than dividend income.

Character and tax status of all distributions will be available to shareholders after the close of each calendar year.

Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition of shares. A distribution will reduce the Fund's NAV per share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds certain threshold amounts.

The Fund's transactions in derivatives (such as futures contracts and swaps) will be subject to special tax rules, the effect of which may be to accelerate income to the Fund, defer losses to the Fund, cause adjustments in the holding periods of the Fund's securities and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to you. The Fund's use of derivatives may result in the Fund realizing more short-term capital gains and ordinary income subject to tax at ordinary income tax rates than it would if it did not use derivatives.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December.

The Goldman Sachs Access Ultra Short Bond ETF may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Fund may deduct these taxes in computing its taxable income.

If you buy Shares of the Fund before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as "buying into a dividend."

TAXES ON CREATIONS AND REDEMPTIONS OF CREATION UNITS

A person who exchanges securities for Creation Units generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on

the basis that there has been no significant change in economic position. Persons exchanging securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction.

Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

SALES OF FUND SHARES

Your sale of Fund Shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. When you sell your Shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the Shares and the amount received. Generally, this capital gain or loss is long-term or short-term depending on whether your holding period exceeds one year, except that any loss realized on Shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the Shares. Additionally, any loss realized on a sale, exchange or redemption of Shares of the Fund may be disallowed under “wash sale” rules to the extent the Shares disposed of are replaced with other Shares of that Fund within a period of 61 days beginning 30 days before and ending 30 days after the date of disposition (such as pursuant to a dividend reinvestment in Shares of the Fund). If disallowed, the loss will be reflected in an adjustment to the basis of the Shares acquired.

OTHER INFORMATION

You may be subject to backup withholding at a rate of 24% with respect to taxable distributions if you do not provide your correct taxpayer identification number, or certify that it is correct, or if you have been notified by the IRS that you are subject to backup withholding.

Non-U.S. investors are generally subject to U.S. withholding tax and may be subject to estate tax with respect to their Fund shares. However, withholding is generally not required on properly reported distributions to non-U.S. investors of long-term capital gains. Non-U.S. investors generally are not subject to U.S. federal income tax withholding on certain distributions of interest income and/or short-term capital gains that are reported by the Fund. Although the Fund will generally report short-term capital gains, the Fund does not anticipate reporting interest income. Therefore, all distributions of interest income will generally be subject to withholding when paid to non-U.S. investors. More information about U.S. taxation and non-U.S. investors is included in the SAI.

Withholding of U.S. tax (at a 30% rate) is required with respect to payments of dividends made to certain non-U.S. entities that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. Shareholders may be requested to provide additional information to enable the applicable withholding agent to determine whether withholding is required.

Reporting to you and the IRS is required annually on Form 1099-B with respect to not only the gross proceeds of Fund Shares you sell or redeem but also their cost basis. Shareholders should contact their intermediaries with respect to reporting of cost basis and available elections with respect to their accounts. You should carefully review the cost basis information provided by the applicable intermediary and make any additional basis, holding period or other adjustments that are required when reporting these amounts on your federal income tax returns.

Other Information

PREMIUM/DISCOUNT INFORMATION

Information regarding how often Shares of the Fund traded on Cboe, as applicable, at a premium or discount during the most recently completed calendar year and the most recently completed calendar quarter(s) since that year (or the life of the Fund, if shorter) can be found at am.gs.com.

CONTINUOUS OFFERING

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Trust on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an “unsold allotment” within the meaning of Section 4(a)(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the Investment Company Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an over-allotment within the meaning of Section 4(a)(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on Cboe is satisfied by the fact that the prospectus is available at Cboe upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

In addition, certain affiliates of the Fund and the Investment Adviser may purchase and resell Fund Shares pursuant to the Prospectus.

DISTRIBUTION AND SERVICE PLAN

The Board of Trustees of the Trust has adopted a distribution and service plan (“Plan”) pursuant to Rule 12b-1 under the Investment Company Act. Under the Plan, the Fund is authorized to pay distribution fees in connection with the sale and distribution of its Shares and pay service fees in connection with the provision of ongoing services to shareholders of the Fund and the maintenance of shareholder accounts in an amount up to 0.25% of its average daily net assets each year.

No Rule 12b-1 fees are currently paid by the Fund, and there are no current plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because these fees are paid out of the Fund’s assets on an ongoing basis, these fees will increase the cost of your investment in the Fund. By purchasing Shares subject to distribution fees and service fees, you may pay more over time than you would by purchasing Shares with other types of sales charge arrangements. Long-term shareholders may pay more than the economic equivalent of the maximum front-end sales charge permitted by the rules of FINRA. The net income attributable to Shares will be reduced by the amount of distribution fees and service fees and other expenses of the Fund.

Appendix A

Additional Information on Portfolio Risks, Securities and Techniques

A. GENERAL PORTFOLIO RISKS

The Fund will be subject to the risks associated with fixed income securities. These risks include, among others, interest rate risk and credit/default risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed income securities tends to increase. Conversely, when interest rates increase, the market value of fixed income securities tends to decline. Credit/default risk involves the risk that an issuer or guarantor could default on its obligations, and the Fund will not recover its investment. Call risk and extension risk are normally present in adjustable rate mortgage loans (“ARMs”), mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities, such as securities backed by car loans.

A rising interest rate environment could cause the value of the Fund’s fixed income securities to decrease, and fixed income markets to experience increased volatility in addition to heightened levels of liquidity risk. Additionally, decreases in the value of fixed income securities could lead to increased redemptions, which could impair the Fund’s ability to achieve its investment objective. The risks associated with changing interest rates may have unpredictable effects on the markets and the Fund’s investments.

To the extent the Fund invests in pooled investment vehicles (including investment companies and ETFs) and partnerships, the Fund will be affected by the investment policies, practices and performances of such entities in direct proportion to the amount of assets the Fund invests therein.

To the extent the Fund’s net assets decrease or increase in the future due to price volatility or share redemption or purchase activity, the Fund’s expense ratio may correspondingly increase or decrease from the expense ratio disclosed in the Prospectus.

The Fund’s investments in derivative instruments, including financial futures contracts, options and swaps, can be significant. These transactions can result in sizeable realized and unrealized capital gains and losses relative to the gains and losses from the Fund’s investments in bonds and other securities. Short-term and long-term realized capital gains distributions paid by the Fund are taxable to their shareholders.

Interest rates, fixed income securities prices, the prices of futures and other derivatives, and currency exchange rates can be volatile, and a variance in the degree of volatility or in the direction of the market from the Investment Adviser’s expectations may produce significant losses in the Fund’s investments in derivatives. In addition, a perfect correlation between a derivatives position and a fixed income security position is generally impossible to achieve. As a result, the Investment Adviser’s use of derivatives may not be effective in fulfilling the Investment Adviser’s investment strategies and may contribute to losses that would not have been incurred otherwise.

Financial futures contracts used by the Fund may include interest rate futures contracts. Further information is included in the Prospectus regarding futures contracts, swaps and other derivative instruments used by the Fund, including information on the risks presented by these instruments and other purposes for which they may be used by the Fund.

The following sections provide further information on certain types of securities and investment techniques that may be used by the Fund, including their associated risks. Additional information is provided in the SAI, which is available upon request. Among other things, the SAI describes certain fundamental investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment objectives, and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in the Fund’s investment objective, you should consider whether the Fund remains an appropriate investment in light of your then current financial position and needs.

B. OTHER PORTFOLIO RISKS

Risks of Foreign Investments. The Fund may make foreign investments. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (e.g., currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S.

dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which a Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to shareholders or converted to U.S. dollars, the Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Certain foreign markets may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, organizations, entities and/or individuals, changes in international trading patterns, trade barriers, and other protectionist or retaliatory measures. International trade barriers or economic sanctions against foreign countries, organizations, entities and/or individuals may adversely affect a Fund's foreign holdings or exposures. The type and severity of sanctions and other similar measures, including counter sanctions and other retaliatory actions, that may be imposed could vary broadly in scope, and their impact is impossible to predict. These types of measures may include, but are not limited to, banning a sanctioned country from global payment systems that facilitate cross-border payments, restricting the settlement of securities transactions by certain investors, and freezing the assets of particular countries, entities, or persons. The imposition of sanctions and other similar measures could, among other things, cause a decline in the value and/or liquidity of securities issued by the sanctioned country or companies located in or economically tied to the sanctioned country, downgrades in the credit ratings of the sanctioned country or companies located in or economically tied to the sanctioned country, devaluation of the sanctioned country's currency, and increased market volatility and disruption in the sanctioned country and throughout the world. Sanctions and other similar measures could limit or prevent the Fund from buying and selling securities (in the sanctioned country and other markets), significantly delay or prevent the settlement of securities transactions, and significantly impact the Fund's liquidity and performance.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States, and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Certain foreign investments may become less liquid in response to social, political or market developments or adverse investor perceptions, or become illiquid after purchase by a Fund, particularly during periods of market turmoil. Certain foreign investments may become illiquid when, for instance, there are few, if any, interested buyers and sellers or when dealers are unwilling to make a market for certain securities. When a Fund holds illiquid investments, its portfolio may be harder to value, especially in changing markets.

Concentration of a Fund's assets in one or a few countries and currencies will subject the Fund to greater risks than if the Fund's assets were not geographically concentrated.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), European Depositary Receipts ("EDRs"), Global Depositary Notes ("GDNs") or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. GDNs are issued by a bank or other depository and evidence ownership of a debt security denominated in local currency. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs and GDNs are quoted in U.S. dollars. EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Sovereign and Quasi-Sovereign Debt. Investment in securities issued by or guaranteed by non-U.S. sovereign governments (known as sovereign debt securities) and in securities issued by entities that are owned or guaranteed by non-U.S. sovereign governments (known as quasi-sovereign debt securities) by a Fund involves risks not present in debt obligations of corporate issuers. The issuer of the sovereign or quasi-sovereign debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due in accordance with the terms of such debt, and a Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign or quasi-sovereign debt, and in turn a Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers. Quasi-sovereign debt obligations are typically less liquid and less standardized than sovereign debt obligations.

A sovereign or quasi-sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign or quasi-sovereign debtor's policy towards international lenders, and the political constraints to which a sovereign or quasi-sovereign debtor may be subject.

Risks of Emerging Countries. The Fund may invest in securities of issuers located in, or otherwise economically tied to, emerging countries. The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in Africa, Asia, the Middle East, Eastern and Central Europe, and Central and South America. A Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of a Fund, the Investment Adviser, its affiliates and their respective clients and other service providers. A Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by a Fund. The repatriation of investment income, capital or the proceeds of securities sales from certain emerging countries is subject to restrictions such as the need for governmental consents, which may make it difficult for a Fund to invest in such emerging countries. A Fund could be adversely affected by delays in, or a refusal to grant, any required governmental approval for such repatriation. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), a Fund may invest in such countries through other investment funds in such countries.

Emerging market countries may have more or less government regulation and generally do not impose as extensive and frequent accounting, auditing, financial and other reporting requirements as the securities markets of more developed countries. The degree of cooperation between issuers in emerging and frontier market countries with foreign and U.S. financial regulators may vary significantly. Accordingly, regulators may not have sufficient access to audit and oversee issuers, and there could be less information available about issuers in certain emerging market countries. As a result, the Investment Adviser's ability to evaluate local companies or their potential impact on the Fund's performance could be inhibited.

Many emerging countries have experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past, some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not occur in other countries.

A Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return to the Fund from an investment in issuers in such countries.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve a Fund's delivery of securities before receipt of payment for its sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for a Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by a Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, a Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make a Fund's investments in such countries less liquid and more volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). A Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Investments in emerging countries may be more difficult to value precisely because of the characteristics discussed above and lower trading volumes.

A Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, all or a significant portion of a Fund's currency exposure in emerging countries may not be covered by those techniques. The Investment Adviser anticipates that a significant portion of a Fund's currency exposure in emerging countries may not be covered by those techniques.

Foreign Custody Risk. The Fund that invest in foreign securities may hold such securities and cash with foreign banks, agents, and securities depositories appointed by a Fund's custodian (each a "Foreign Custodian"). Some Foreign Custodians may be recently organized or new to the foreign custody business. In some countries, Foreign Custodians may be subject to little or no regulatory oversight over or independent evaluation of their operations. Further, the laws of certain countries may place limitations on a Fund's ability to recover its assets if a Foreign Custodian enters bankruptcy. Investments in emerging markets may be subject to even greater custody risks than investments in more developed markets. Custody services in emerging market countries are very often undeveloped and may be considerably less well regulated than in more developed countries, and thus may not afford the same level of investor protection as would apply in developed countries.

Geographic Risk. If a Fund focuses its investments in securities of issuers located in a particular country or region, the Fund may be subjected to a greater extent than if investments were less focused, to the risks of volatile economic cycles and/or conditions and developments that may be particular to that country or region, such as: adverse securities markets; adverse exchange rates; adverse social, political, regulatory, economic, business, environmental or other developments; or natural disasters.

Risks of Derivative Investments. The Funds may invest in derivative instruments, including without limitation, options, futures, options on futures, forwards, participation notes, swaps, options on swaps, forward contracts, structured securities and other derivatives relating to foreign currency transactions. Losses from derivative instruments can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, the failure of the counterparty to perform its contractual obligations, or the risks related to leverage factors associated with such transactions. Derivatives are also subject to risks arising from margin requirements, which include the risk that a Fund will be required to pay additional margin or set aside additional collateral to maintain open derivative positions and the risk of loss by a Fund of margin deposits in the event of the bankruptcy or other similar insolvency with respect to a broker or counterparty with whom a Fund has an open derivative position. Losses may also arise if the Funds receive cash collateral under the transactions and some or all of that collateral is invested in the market. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and a Fund may be responsible for any loss that might result from its investment of the counterparty's cash collateral. If cash collateral is not invested, a Fund may be exposed to additional risk of loss in the event of the insolvency of its custodian holding such collateral. The use of these management techniques also involves the risk of loss if the Investment Adviser is incorrect in its expectation of the timing or level of fluctuations in securities prices, interest rates, currency prices or other variables. Derivative instruments may be harder to value, subject to greater volatility and more likely subject to changes in tax treatment than other investments.

Risks of Illiquid Investments. Each Fund may not acquire any "illiquid investment" if, immediately after the acquisition, the Fund would have invested more than 15% of its net assets in illiquid investments that are assets. An "illiquid investment" is any investment that a Fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. In determining whether an investment is an illiquid investment, the Investment Adviser will take into account actual or estimated daily transaction volume of an investment, group of related investments or asset class and other relevant market, trading, and investment-specific considerations. In addition, in determining the liquidity of an investment, the Investment Adviser must determine whether trading varying portions of a position in a particular portfolio investment or asset class, in sizes that a Fund would reasonably anticipate trading, is reasonably expected to significantly affect its liquidity, and if so, the Fund must take this determination into account when classifying the liquidity of that investment or asset class.

Investments purchased by a Fund that are liquid at the time of purchase may subsequently become illiquid. If one or more investments in a Fund's portfolio become illiquid, the Fund may exceed the 15 percent limitation in illiquid investments. In the event that changes in the portfolio or other external events cause the Fund to exceed this limit, the Fund must take steps to bring its illiquid investments that are assets to or below 15% of its net assets within a reasonable period of time. This requirement would not force a Fund to liquidate any portfolio instrument where the Fund would suffer a loss on the sale of that instrument.

In cases where no clear indication of the value of a Fund's portfolio instruments is available, the portfolio instruments will be valued at their fair value according to the valuation procedures approved by the Board of Trustees. These cases include, among others, situations where a security or other asset or liability does not have a price source, or the secondary markets on which an investment has previously been traded are no longer viable, due to its lack of liquidity. For more information on fair valuation, please see "Shareholder Guide—Net Asset Value."

C. PORTFOLIO SECURITIES AND TECHNIQUES

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks.

The Funds may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Funds' investment objectives and policies. Further information is provided in the SAI, which is available upon request.

Foreign Currency Transactions. The Fund may, to the extent consistent with its investment policies, purchase or sell foreign currencies on a cash basis. A Fund may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. In addition, a Fund may enter into foreign currency transactions to seek a closer correlation between the Fund's overall currency exposures and the currency exposures of the Fund's performance benchmark. A Fund may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

A Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the Investment Adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (*e.g.* the Investment Adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, a Fund's NAV to fluctuate (when the Fund's NAV fluctuates, the value of your shares may go up or down). Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the counterparty to the contract will default on its obligations. Because these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive a Fund of unrealized profits, transaction costs or the benefits of a currency hedge or could force the Fund to cover its purchase or sale commitments, if any, at the current market price.

A Fund is not required to post cash collateral with its counterparties in certain foreign currency transactions. Accordingly, a Fund may remain more fully invested (and more of the Fund's assets may be subject to investment and market risk) than if it were required to post collateral with its counterparties (which is the case with certain transactions). Where a Fund's counterparties are not required to post cash collateral with the Fund, the Fund will be subject to additional counterparty risk.

Bank Obligations. The Fund may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits, bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry.

Zero Coupon, Deferred Interest, Pay-In-Kind and Capital Appreciation Bonds. A Fund may invest in zero coupon bonds, deferred interest, pay-in-kind and capital appreciation bonds. These bonds are issued at a discount from their face value because interest payments are typically postponed until maturity. Pay-in-kind securities are securities that have interest payable by the delivery of additional securities. The market prices of these securities generally are more volatile than the market prices of interest-bearing securities and are likely to respond to a greater degree to changes in interest rates than interest-bearing securities having similar maturities and credit quality.

Mortgage Dollar Rolls. The Fund may enter into mortgage dollar rolls. A mortgage dollar roll involves the sale by a Fund of securities for delivery in the current month. A Fund simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, a Fund loses the right to receive principal and interest paid on the securities sold. However, a Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish a Fund's performance.

Successful use of mortgage dollar rolls depends upon the Investment Adviser's ability to predict correctly interest rates and mortgage prepayments. If the Investment Adviser is incorrect in its prediction, a Fund may experience a loss. The Funds do not currently intend to enter into mortgage dollar rolls for financing and do not treat them as borrowings.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. A Fund may write (sell) call and put options and purchase put and call options on any securities and other instruments in which the Fund may invest or any index consisting of securities or other instruments in which it may invest. A Fund may also, to the extent consistent with its investment policies, purchase and sell (write) put and call options on foreign currencies. The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which presents additional risk). The successful use of options depends in part on the ability of the Investment Adviser to anticipate future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If the Investment Adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in a Fund's investment portfolio, the Fund may incur losses that it would not otherwise incur. The use of options can also increase a Fund's transaction costs. Options written or purchased by the Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Floating and Variable Rate Obligations. Each Fund may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable both of which may be issued by domestic banks or foreign banks. Each Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institutions.

Floating and variable rate obligations may be transferable among financial institutions, but may not have the liquidity of conventional debt securities and are often subject to legal or contractual restrictions on resale. Floating and variable rate obligations are not currently listed on any securities exchange or automatic quotation system. As a result, no active market may exist for some floating and variable rate obligations. To the extent a secondary market exists for other floating and variable rate obligations, such market may be subject to irregular trading activity, wide bid/ask spreads, and extended trade settlement periods. The lack of a highly liquid secondary market for floating and variable rate obligations may have an adverse effect on the value of such obligations and may make it more difficult to value the obligations for purposes of calculating their respective net asset value.

For floating and variable rate obligations, there may be a lag between an actual change in the underlying interest rate benchmark and the reset time for an interest payment of such an obligation, which could harm or benefit a Fund, depending on the interest rate environment or other circumstances. In a rising interest rate environment, for example, a floating or variable rate obligation that does not reset immediately would prevent a Fund from taking full advantage of rising interest rates in a timely manner. However, in a declining interest rate environment, a Fund may benefit from a lag due to an obligation's interest rate payment not being immediately impacted by a decline in interest rates.

Certain floating and variable rate obligations have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the "reference rate"), such as SOFR, Term SOFR or another rate determined using SOFR. Such a floor protects a Fund from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the obligation, and a Fund may not benefit from increasing interest rates for a significant amount of time.

SOFR is a measure of the cost of borrowing cash overnight, collateralized by the U.S. Treasury securities, and is based on directly observable U.S. Treasury-backed repurchase transactions.

U.S. Treasury Securities and U.S. Government Securities. A Fund may invest in U.S. Treasury Securities, which include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program. U.S. Treasury Securities also include Treasury inflation-protected securities whose principal value is periodically adjusted according to the rate of inflation.

A Fund may also invest in other U.S. Government Securities. Unlike U.S. Treasury Securities, U.S. Government Securities can be supported by either (i) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association); (ii) the right of the issuer to borrow from the U.S. Treasury; (iii) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (iv) only the credit of the issuer.

U.S. Government Securities are deemed to include (i) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. Government, its agencies, authorities or instrumentalities; and (ii) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

A Fund may also invest in U.S. Treasury Securities and certain U.S. Government Securities, the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. Government, including the Federal Home Loan Banks, Federal Farm Credit Banks and Tennessee Valley Authority.

U.S. Treasury Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will be able or willing to repay the principal or interest when due or provide financial support to U.S. Government agencies, authorities, instrumentalities or sponsored enterprises that issue U.S. Government Securities if it is not obligated to do so by law.

Custodial Receipts and Trust Certificates. Each Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities or other types of securities in which a Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. A Fund may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. Mortgage-backed securities can be backed by either fixed rate mortgage loans or adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates. The value of these securities may also fluctuate in response to the market's perception of the creditworthiness of the issuers. Early repayment of principal on mortgage- or asset-backed securities may expose a Fund to the risk of earning a lower rate of return upon reinvestment of principal.

A Fund may invest in privately-issued mortgage pass-through securities that represent interests in pools of mortgage loans that are issued by trusts formed by originators of and institutional investors in mortgage loans (or represent interests in custodial arrangements administered by such institutions). These originators and institutions include commercial banks, savings and loans associations, credit unions, savings banks, mortgage bankers, insurance companies, investment banks or special purpose subsidiaries of the foregoing. The pools underlying privately-issued mortgage pass-through securities consist of mortgage loans secured by mortgages or deeds of trust creating a first lien on commercial, residential, residential multi-family and mixed residential/commercial properties. These mortgage-backed securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities.

Privately-issued mortgage pass-through securities generally offer a higher yield than similar securities issued by a government entity because of the absence of any direct or indirect government or agency payment guarantees. However, timely payment of interest and principal on mortgage loans in these pools may be supported by various other forms of insurance or guarantees, including individual loan, pool and hazard insurance, subordination and letters of credit. Such insurance and guarantees may be issued by private insurers, banks and mortgage poolers. There is no assurance that private guarantors or insurers, if any, will meet their obligations. Mortgage-backed securities without insurance or guarantees may also be purchased by a Fund if they have the required rating from an NRSRO. Some mortgage-backed securities issued by private organizations may not be readily marketable, may be more difficult to value accurately and may be more volatile than similar securities issued by a government entity.

Mortgage-backed securities may include multiple class securities, including collateralized mortgage obligations (“CMOs”) and Real Estate Mortgage Investment Conduit (“REMIC”) pass-through or participation certificates. A REMIC is a CMO that qualifies for special tax treatment under the Code and invests in certain mortgages principally secured by interests in real property and other permitted investments. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other mortgage-backed securities. CMOs are issued in multiple classes each with a specified fixed or floating interest rate and a final scheduled distribution date. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full.

Sometimes, however, CMO classes are “parallel pay,” i.e., payments of principal are made to two or more classes concurrently. In some cases, CMOs may have the characteristics of a stripped mortgage-backed security whose price can be highly volatile. CMOs may exhibit more or less price volatility and interest rate risk than other types of mortgage-backed securities, and under certain interest rate and payment scenarios, the Fund may fail to recoup fully its investment in certain of these securities regardless of their credit quality.

To the extent a Fund concentrates its investments in pools of mortgage-backed securities sponsored by the same sponsor or serviced by the same servicer, it may be subject to additional risks. Servicers of mortgage-related pools collect payments on the underlying mortgage assets for pass-through to the pool on a periodic basis. Upon insolvency of the servicer, the pool may be at risk with respect to collections received by the servicer but not yet delivered to the pool.

Mortgage-backed securities also include stripped mortgage-backed securities (“SMBS”), which are derivative multiple class mortgage-backed securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other mortgage-backed securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped. Throughout 2008, the market for mortgage-backed securities began experiencing substantially, often dramatically, lower valuations and greatly reduced liquidity. Markets for other asset-backed securities have also been affected. These instruments are increasingly subject to liquidity constraints, price volatility, credit downgrades and unexpected increases in default rates and, therefore, may be more difficult to value and more difficult to dispose of than previously. These events may have an adverse effect on the Funds to the extent they invest in mortgage-backed or other fixed income securities or instruments affected by the volatility in the fixed income markets.

Corporate Debt Obligations, Trust Preferred Securities and Convertible Securities. The Fund may invest in corporate debt obligations, trust preferred securities and convertible securities. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of corporations to pay interest and repay principal. A trust preferred security is a long dated bond (for example, 30 years) with preferred features. The preferred features are that payment of interest can be deferred for a specified period without initiating a default event. The securities are generally senior in claim to standard preferred stock but junior to other bondholders. The Fund may also invest in other short-term obligations issued or guaranteed by U.S. corporations, non-U.S. corporations or other entities.

Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. Convertible securities have both equity and fixed income risk characteristics. Like all fixed income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Other Investment Companies. Each Fund may invest in securities of other investment companies, including ETFs and money market funds, subject to statutory limitations prescribed by the Investment Company Act or rules, regulations or exemptive relief thereunder. These statutory limitations include in certain circumstances a prohibition on any Fund acquiring more than 3% of the voting Shares of any other investment company, and a prohibition on investing more than 5% of a Fund’s total assets in securities of any one investment company or more than 10% of total assets in securities of all investment companies.

Subject to applicable law and/or pursuant to an exemptive order obtained from the SEC or under an exemptive rule adopted by the SEC, a Fund may invest in certain other investment companies (including ETFs and money market funds) and business development companies beyond the statutory limits described above or otherwise provided that certain conditions are met. Some of those investment companies may be funds for which the Investment Adviser or any of their affiliates serves as investment adviser, administrator or distributor.

Additionally, to the extent that any Fund serves as an “acquired fund” to another Goldman Sachs Fund or unaffiliated investment company, the Fund’s ability to invest in other investment companies and private funds may be limited and, under these circumstances, the Fund’s investments in other investment companies and private funds will be consistent with applicable law and/or exemptive rules adopted by or exemptive orders obtained from the SEC. For example, to the extent the Fund serves as an acquired fund in a fund of funds arrangement in reliance on Rule 12d1-4 under the Investment Company Act, the Fund would be prohibited from purchasing or otherwise acquiring the securities of an investment company or private fund if, after such purchase or acquisition, the aggregate value of the Fund’s investments in such investment companies and private funds would exceed 10% of the value of the Fund’s total assets, subject to limited exceptions (including for investments in money market funds).

A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies, in addition to the fees and expenses regularly borne by the Fund. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund.

Repurchase Agreements. Repurchase agreements involve the purchase of securities subject to the seller’s agreement to repurchase them at a mutually agreed upon date and price. Each Fund may enter into repurchase agreements with counterparties that furnish collateral at least equal in value or market price to the amount of their repurchase obligations. The collateral may consist of any type of security in which a Fund is eligible to invest directly. Repurchase agreements involving obligations other than U.S. government securities may be subject to additional risks.

If the other party or “seller” defaults, a Fund might suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund’s costs associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy of the seller, a Fund could suffer additional losses if a court determines that the Fund’s interest in the collateral is not enforceable.

Each Fund, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. The Fund may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, the Fund’s ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. Some asset-backed securities have only a subordinated claim or security interest in collateral. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, the Fund will be unable to possess and sell the underlying collateral and that the Fund’s recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, the Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed. There is no guarantee that private guarantors, or insurers of an asset-backed security, if any, will meet their obligations. The value of some asset-backed securities may be particularly sensitive to changes in prevailing interest rates. Asset-backed securities may also be subject to increased volatility and may become illiquid and more difficult to value even when there is no default or threat of default due to market conditions impacting asset-backed securities more generally.

Municipal Obligations. The Fund may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which the Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper or other instruments. Municipal obligations are generally subject to those risks associated with debt securities generally. In addition, the Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the debt securities of similar projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal obligations (such as general obligation bonds, private activity bonds and moral obligation bonds).

The Fund may invest in municipal obligations issued by municipalities, including U.S. territories, commonwealths and possessions, that may be, or may become, subject to significant financial difficulties. Factors contributing to such difficulties may include: lower property tax collections as a result of lower home values, lower sales tax revenue as a result of reduced consumer spending, lower income tax revenue as a result of higher unemployment rates, and budgetary constraints of local, state and federal governments upon

which issuers of municipal obligations may be relying for funding. Such obligations may be considered below investment grade or may be subject to future credit downgrades due to concerns over potential default, insolvency or bankruptcy on the part of their issuers or any credit support provider. During the recent economic downturn, several municipalities have, in fact, filed for bankruptcy protection or have indicated that they may seek bankruptcy protection in the future. A credit downgrade or other adverse news about an issuer or any credit support provider could impact the market value and liquidity of the securities and consequently could negatively affect the performance of the Fund.

Collateralized Loan Obligations. The Fund may invest in CLOs. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. CLOs may charge management and other administrative fees. The cashflows from the trust are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the “equity” tranche which bears the bulk of defaults from the bonds or loans in the trust and serves to protect the other, more senior tranches from default in all but the most severe circumstances. Because it is partially protected from defaults, a senior tranche from a CLO trust typically has higher ratings and lower yields than its underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, CLO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of protecting tranches, market anticipation of defaults, as well as aversion to CLO securities as a class.

The risks of an investment in a CLO depend largely on the type of the collateral securities and the class of the CLO in which a Fund invests. Normally, CLOs are privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in CLOs may be characterized by a Fund as illiquid securities. However, an active dealer market may exist for CLOs that qualify under the Rule 144A “safe harbor” from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers, and such CLOs may be characterized by a Fund as liquid securities.

Borrowings and Reverse Repurchase Agreements. Each Fund can borrow money from banks and other financial institutions, in amounts not exceeding one-third of its total assets (including the amount borrowed). Each Fund also may enter into reverse repurchase agreements.

Reverse repurchase agreements involve the sale of securities held by a Fund subject to the Fund’s agreement to repurchase them at a mutually agreed upon date and price (including interest). These transactions may be entered into as a temporary measure for emergency purposes or to meet redemption requests. Reverse repurchase agreements may also be entered into when the Investment Adviser expects that the interest income to be earned from the investment of the transaction proceeds will be greater than the related interest expense.

Borrowings and reverse repurchase agreements involve leveraging. If the securities held by a Fund decline in value while these transactions are outstanding, the NAV of the Fund’s outstanding Shares will decline in value by proportionately more than the decline in value of the securities. In addition, reverse repurchase agreements involve the risk that the investment return earned by a Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by the Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the securities may not be returned to the Fund.

Futures Contracts and Options and Swaps on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A swap on a futures contract provides an investor with the ability to gain economic exposure to a particular futures market. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. The Funds may engage in futures transactions on U.S. and foreign exchanges.

Each Fund may, to the extent consistent with its investment policies, purchase and sell futures contracts, purchase and write call and put options on futures contracts, and enter into swaps on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices, or currency exchange rates, or to otherwise manage its term structure, sector selection and duration in accordance with its investment objective and policies. Each Fund may also enter into closing purchase and sale transactions with respect to such contracts and options.

Futures contracts and related options and swaps present the following risks:

- While a Fund may benefit from the use of futures and options and swaps on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in poorer overall performance than if the Fund had not entered into any futures contracts, options transactions or swaps.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection may not be obtained and a Fund may be exposed to additional risk of loss.

- The loss incurred by a Fund in entering into futures contracts and in writing call options and entering into swaps on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of a Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to a Fund.
- Futures contracts and options and swaps on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps, Options on Swaps and Interest Rate Caps, Floors and Collars. A Fund may enter into some or all of the following swap transactions and option agreements, including interest rate swaps, mortgage swaps, credit swaps, currency swaps, total return swaps, options on swaps and interest rate caps, floors and collars. Interest rate swaps involve the exchange by a Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps (also referred to as credit default swaps) involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security or pool of securities. Credit swaps give one party to a transaction (the buyer of the credit swap) the right to dispose of or acquire an asset (or group of assets or exposure to the performance of an index), or the right to receive a payment from the other party, upon the occurrence of specified credit events.

Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give a party the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be based on an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the party may also be required to pay the dollar value of that decline to the counterparty.

A Fund may also purchase and write (sell) options contracts on swaps, commonly referred to as swaptions. A swaption is an option to enter into a swap agreement. Like other types of options, the buyer of a swaption pays a non-refundable premium for the option and obtains the right, but not the obligation, to enter into an underlying swap or to modify the terms of an existing swap on agreed-upon terms. The seller of a swaption, in exchange for the premium, becomes obligated (if the option is exercised) to enter into or modify an underlying swap on agreed-upon terms, which generally entails a greater risk of loss than the Fund incurs in buying a swaption. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

A Fund may enter into the transactions described above for hedging purposes or to seek to increase total return. As an example, when a Fund is the buyer of a credit default swap (commonly known as buying protection), it may make periodic payments to the seller of the credit default swap to obtain protection against a credit default on a specified underlying asset (or group of assets). If a default occurs, the seller of a credit default swap may be required to pay the Fund the notional amount of the credit default swap on a specified security (or group of securities). On the other hand, when a Fund is a seller of a credit default swap (commonly known as selling protection), in addition to the credit exposure the Fund has on the other assets held in its portfolio, the Fund is also subject to the credit exposure on the notional amount of the swap since, in the event of a credit default, the Fund may be required to pay the notional amount of the credit default swap on a specified security (or group of securities) to the buyer of the credit default swap. A Fund will be the seller of a credit default swap only when the credit of the underlying asset is deemed by the Investment Adviser to meet the Fund's minimum credit criteria at the time the swap is first entered into.

The use of interest rate, mortgage, credit, currency and total return swaps, options on swaps, and interest rate caps, floors and collars, is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If the Investment Adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, or in its evaluation of the creditworthiness of swap counterparties and the issuers of the underlying assets, the investment performance of a Fund would be less favorable than it would have been if these investment techniques were not used.

Currently, certain standardized swap transactions are subject to mandatory central clearing and exchange trading. Although central clearing and exchange trading is expected to decrease counterparty risk and increase liquidity compared to bilaterally negotiated swaps, central clearing and exchange trading does not eliminate counterparty risk or illiquidity risk entirely. Depending on the size of a Fund and other factors, the margin required under the rules of a clearinghouse and by a clearing member may be in excess of the

collateral required to be posted by the Fund to support its obligations under a similar bilateral, uncleared swap. However, certain applicable regulators have adopted rules imposing certain margin requirements, including minimums, on uncleared swaps which may result in the Fund and its counterparties posting higher amounts for uncleared swaps.

Loan-Related Investments. A Fund may invest in loan-related investments such as loan participations and assignments. A loan participation is an interest in a loan to a U.S. or foreign company or other borrower (the “borrower”) which is administered and sold by a financial intermediary. A Fund may only invest in loans to issuers in whose obligations it may otherwise invest. Loan interests may take the form of a direct or co-lending relationship with the borrower, an assignment of an interest in the loan by a co-lender or another participant, or a participation in the seller’s share of the loan. When a Fund acts as co-lender in connection with a loan interest or when it acquires certain interests, the Fund will have direct recourse against the borrower if the borrower fails to pay scheduled principal and interest. In cases where a Fund lacks direct recourse, it will look to an agent for the lenders (the “agent lender”) to enforce appropriate credit remedies against the borrower. In these cases, a Fund may be subject to delays, expenses and risks that are greater than those that would have been involved if the Fund had purchased a direct obligation (such as commercial paper) of such borrower.

An assignment typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the purchaser’s rights can be more restricted than those of the assigning institution, and, in any event, a Fund may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. A participation typically results in a contractual relationship only with the institution participating out the interest, not with the borrower. In purchasing participations, a Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement against the borrower, and the Fund may not directly benefit from the collateral supporting the debt obligation in which it has purchased the participation. As a result, a Fund will be exposed to the credit risk of both the borrower and the institution selling the participation. Investors in loans, such as a Fund, may not be entitled to rely on the anti-fraud provisions of the federal securities laws, although they may be entitled to certain contractual remedies.

The market for loan obligations may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods. Because transactions in many loans are subject to extended trade settlement periods, a Fund may not receive the proceeds from the sale of a loan for a period after the sale. As a result, sale proceeds related to the sale of loans may not be available to make additional investments or to meet a Fund’s redemption obligations for a period after the sale of the loans, and, as a result, the Fund may have to sell other investments or engage in borrowing transactions, such as borrowing from its credit facility, if necessary to raise cash to meet its obligations. During periods of heightened redemption activity or distressed market conditions, a Fund may seek to obtain expedited trade settlement, which will generally incur additional costs (although expedited trade settlement will not always be available).

Senior loans hold the most senior position in the capital structure of a borrower, are typically secured with specific collateral and have a claim on the assets and/or stock of the borrower that is senior to that held by subordinated debt holders and stockholders of the borrower. The proceeds of senior loans primarily are used to finance leveraged buyouts, recapitalizations, mergers, acquisitions, stock repurchases, refinancings and to finance internal growth and for other corporate purposes. Senior loans typically have a stated term of between five and nine years, and have rates of interest which typically are redetermined daily, monthly, quarterly or semi-annually by reference to a base lending rate, plus a premium or credit spread. Longer interest rate reset periods generally increase fluctuations in a Fund’s net asset value as a result of changes in market interest rates. As a result, as short-term interest rates increase, interest payable to the Fund from its investments in senior loans should increase, and as short-term interest rates decrease, interest payable to the Fund from its investments in senior loans should decrease. Second lien loans have the same characteristics as senior loans except that such loans are subordinated or unsecured and thus lower in priority of payment to senior loans. Accordingly, the risks associated with second lien loans are higher than the risk of loans with first priority over the collateral. In the event of default on a second lien loan, the first priority lien holder has first claim to the underlying collateral of the loan. It is possible that no collateral value would remain for the second priority lien holder and therefore result in a loss of investment to a Fund. Second lien loans typically have adjustable floating rate interest payments. Generally, loans have the benefit of restrictive covenants that limit the ability of the borrower to further encumber its assets or impose other obligations. To the extent a loan does not have certain covenants (or has less restrictive covenants), an investment in the loan will be particularly sensitive to the risks associated with loan investments.

When-Issued Securities and Forward Commitments. A Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price or yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, the Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Financial Highlights

The financial highlights tables are intended to help you understand the Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund Share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions). The information has been audited by PricewaterhouseCoopers LLP, whose report, along with the Fund's financial statements, is included in the Fund's Form N-CSR dated August 31, 2024.

Ratio of total expenses to average net assets	0.20%	0.20%	0.20%	0.20%	0.20%
Ratio of net investment income to average net assets	5.38%	4.25%	0.98%	0.55%	1.45%
Portfolio turnover rate ^(c)	87%	76%	37%	51%	63%

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the year; reinvestment of all distributions and a complete sale of the investment at the net asset value at the end of the year. Returns do not reflect the impact of taxes to shareholders relating to Fund distributions or the sale of Fund shares.

(c) The Fund's portfolio turnover rate is calculated in accordance with regulatory requirements and excludes portfolio securities received or delivered as a result of in-kind transactions and short-term transactions. If such transactions were included, the Fund's portfolio turnover rate may be higher.
