Goldman Sachs ActiveBeta® World Low Vol Plus Equity ETF

As of October 31, 2025

Seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the Goldman Sachs ActiveBeta® World Low Vol Plus Equity Index

Emphasis on Low Volatility

GLOV seeks to provide the risk reduction associated with low volatility stocks, while also providing exposure to other factors commonly tied to overall global market performance.

Opportunity to Outperform Diversifies Your Portfolio the Market

GLOV tracks an index that selects stocks based on four distinct attributes that are associated with long-term performance: good value, strong momentum, high quality, and low volatility.

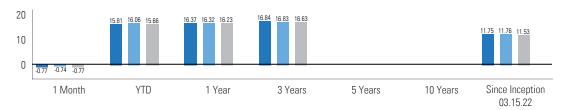

GLOV may be an attractive option for investors to diversify their equity exposure and gain efficient access to four distinct performance attributes.

Market Price	14.20	-	12.29

The returns represent past performance. Past performance does not guarantee future results. The Fund's investment return and principal value will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted above. Please visit our Web site at: am.gs.com/ETFs to obtain the most recent month-end returns.

Performance reflects cumulative total returns for periods of less than one year and average annual total returns for periods of greater than one year. All Fund performance data reflect the reinvestment of distributions.

Total returns are calculated assuming purchase of a share at the market price or NAV on the first day and sale of a share at the market price or NAV on the last day of each period reported. The Total Returns Based on NAV and Market Price do not reflect brokerage commissions in

connection with the purchase or sale of Fund shares, which if included would lower the performance shown above.

The NAV used in the Total Return calculation assumes all management fees and operating expenses incurred by the Fund. Market Price returns are based upon the last trade as of 4:00pm EST and do not reflect the returns you would receive if you traded shares at other times. The first day of secondary market trading is typically several days after the fund inception of investment operations date; therefore, the NAV of the Fund is used as a proxy for the period from inception of investment operations to the first day of secondary market trading to calculate the Market Price

Net Asset Value is the market value of one share of the Fund. This amount is derived by dividing the total value of all the securities in the fund's portfolio, less any liabilities, by the number of fund shares outstanding. Market Price is the price at which the Fund's shares are trading on the NYSE Arca. The Market Price of the Fund's shares will fluctuate and, at the time of sale, shares may be worth more or less than the original investment or the Fund's then current net asset value. The Fund cannot predict whether its shares will trade at, above or below net asset value Diversification does not protect an investor from market risk and does not ensure a profit.

Given the Fund's investment objective of attempting to track its Index, the Fund does not follow traditional methods of active investment management, which may involve buying and selling securities based upon analysis of economic and market factors. Also, unlike many investment companies, the Fund does not attempt to outperform the Index that it tracks and does not seek temporary defensive positions when markets decline or appear overvalued.

Total Annual Fund Operating Expenses (%) 0.25%, Please note the figures shown above is the unitary management fee. Under the management fee for GLOV, Goldman Sachs Asset Management LP., the Fund's investment adviser, is responsible for paying substantially all the expenses of the Fund, excluding the payments under the Fund's 12b-1 plan (if any), interest expenses, taxes, acquired fund fees and expenses, brokerage fees, costs of holding shareholder meetings, litigation, indemnification and extraordinary expenses. Please refer to the Fund's prospectus for the most recent expenses.

Fund holdings and allocations shown are unaudited, and may not be representative of current or future investments. Fund holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk. Percentages may not sum to 100% due to rounding.

To construct our ActiveBeta® World Low Vol Plus Equity Index (the Index) we:

- Start with the market capitalization weighted universe
- Score each stock for Low Volatility; based on those scores, a Low Volatility core index is created
- Score each stock in the Low Volatility core index on 3 Top Ten Country Allocations (%) distinct factors: Value, Momentum, and Quality
- Construct 3 risk-aware factor portfolios by overweighting stocks with higher factor scores and underweighting or removing stocks with lower factor scores; constrain weights to remain broadly in line with the market
- Combine these 3 factor portfolios equally to form the
- Rebalance Index quarterly, using a patent-pending technique to reduce turnover

The Goldman Sachs ActiveBeta® World Low Vol Plus Equity ETF (the "Fund") seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the Goldman Sachs ActiveBeta® World Low Vol Plus Equity Index (the "Index"), which delivers exposure to large- and mid-capitalization equity securities of developed market issuers, including the United States. The Fund's investments are subject to market risk, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions. Foreign investments may be more volatile and less liquid than investments in U.S. securities and are subject to the risks of currency fluctuations and adverse social, economic or political developments. Because the Fund may concentrate its investments in an industry or group of industries to the extent that the Index is concentrated, the Fund may be subject to greater risk of loss as a result of adverse economic, business or other developments affecting that industry or group of industries. The securities of mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. The Fund is not actively managed, and therefore the Fund will not generally dispose of a security unless the security is removed from the Index. The Index calculation methodology may rely on information based on assumptions and estimates and neither the Fund, the index provider nor the investment adviser can guarantee the accuracy of the methodology's valuation of securities or the availability or timeliness of the production of the Index. Performance may vary substantially from the performance of the Index as a result of transaction costs, expenses and other factors. Fund shares are not individually redeemable and are issued and redeemed by the Fund at their net asset value ("NAV") only in large, specified blocks of shares called creation units. Shares otherwise can be bought and sold only through exchange trading at market price (not NAV). Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage

commissions will reduce returns.

Investment terms: The Price to Book (P/B) ratio is used to compare a stock's book value to its market value. It can be aggregated for groups of stocks. The Price to Earnings (P/E) ratio compares a stock's earnings in a specified fiscal period to its market value. It can be aggregated for groups of stocks. Return on Equity (ROE) is the amount of net income as a percentage of shareholders equity. #Dividend Yield is derived as a weighted average of the dividend yield of the underlying securities and is not a distribution payment made by the fund.

The Weighted Average Market Cap represents the average value of the companies in the index or portfolio.

The method of calculation of the 30-Day Standardized Yield is mandated by the Securities and Exchange Commission and is determined by dividing the net investment income per share earned during the last 30 days of the period by the maximum public offering price ("POP") per share on the last day of the period. This number is then annualized. The yield figure reflects the dividends and interest earned during the 30 day period, after the deduction of the fund's expenses. The portfolio risk management process includes an effort to monitor and manage risk, but does not imply

Good Value: The index identifies stocks from companies that may be undervalued by the rest of the market. These stocks tend to outperform as they move toward fair value. This can help you gain exposure to high potential stocks others may have overlooked. Strong Momentum: The index identifies stocks that have recently performed well and may exhibit some persistence in their outperformance. This allows you to participate in market trends. High Quality: The index identifies stocks from companies that efficiently generate profits over time. This allows you to gain exposure to companies with strong fundamentals and the potential for consistent returns. Low Volatility. The index identifies stocks from companies that are likely to avoid extreme swings up

and down in price. This aims to smooth out the ride, which will help compound your returns over time.

The Investment Company Act of 1940 (the "Act") imposes certain limits on investment companies purchasing or acquiring any security issued by another registered investment company. For these purposes the definition of "investment company" includes funds that are unregistered because they are excepted from the definition of investment company by sections 3(c) and 3(c) of the Act. You should consult your legal counsel for more information.
