Goldman Sachs Dynamic Municipal Income Fund

Market Review

The Fund's benchmark, as represented by the Bloomberg Municipal Bond 1-10 Year Blend Index, returned 1.04% over the three months ended June 30, 2025.

Municipal bonds began the second quarter on a difficult note due to a combination of heavy supply, tax-season related selling, record outflows, and ongoing scrutiny of the market's tax-exempt status. However, May and June brought some stability and positive returns to the market. A combination of positive factors—infows, investors pre-spending elevated summertime re-investment capital, and positive news regarding preserving the tax exemption—created a constructive market environment for municipal bonds.

Munis had mixed performance versus Treasuries as benchmark muni yields fell in short and intermediate-term maturities but were materially higher in longer-term ones. Muni/UST ratios were mixed across the curve, with 2yr and 30yr ratios increasing to 71% and 91%, while 5yr and 10yr ratios decreased to 72% and 75%, respectively.

Fund Performance Attribution

The Goldman Sachs Dynamic Municipal Income Fund returned -0.16% (I share, net) during the second quarter of 2025, underperforming the Bloomberg Municipal Bond 1-10 Year Blend Index by 121 basis points (bps, net).

- Longer than benchmark duration and exposure to 20+ year maturities detracted as the curve steepened.
- Municipal credit beta detracted as spreads widened.
- Overweight positioning and security selection across special tax sectors, specifically special assessment bonds, contributed to performance.
- Overweight exposure to Puerto Rico issuers and select long duration tobacco structures detracted from performance.

The returns represent past performance. Past performance does not guarantee future results. The Fund's investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted above. Please visit our Web site at: <https://am.gs.com> to obtain the most recent month-end returns. The Standardized Total Returns are average annual total returns or cumulative total returns (only if the performance period is one year or less) as of the most recent calendar quarter-end. They assume reinvestment of all distributions at net asset value. Because Institutional Shares do not involve a sales charge, such a charge is not applied to their Standardized Total Returns.

The Morningstar Rating™ is calculated for funds with at least a 3-year history based on a risk-adjusted return measure that accounts for variation in a fund's monthly excess returns. Exchange-traded funds and open-ended mutual funds are considered a single population. In each category, the top 10% = 5 stars, next 22.5% = 4 stars, next 35% = 3 stars, next 22.5% = 2 stars, and bottom 10% = 1 star. Overall rating is derived from a weighted average of the returns associated with its 3-, 5-, and 10-year (if applicable) rating, excluding all sales charges. Weights are based on the # of months of total returns: 100% 3-year rating for 36-59 months, 60% 5-year rating/40% 3-year rating for 60-119 months, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months. See page 4-5 for definitions.

Positioning Changes

Ratings Allocation

- High yield municipal spreads increased by 11bps during the quarter and ended June at 185bps. High yield credit spreads have averaged 266bps over the last ten years but also reached levels as low as 161bps during this past April.
- Modestly increased exposure to select high yield and non-rated credits amidst spread widening.

GS Dynamic Municipal Income Fund Credit Breakdown (%)

Internal Allocations of Non-Rated Securities (MV, %)¹

Highest Grade ²	0.7%
Medium Grade ³	8.2%
Below Investment Grade ⁴	11.0%
Total	19.9%

Duration Positioning

- The municipal yield curve steepened over the quarter and long maturities underperformed. The difference between 2- and 30-year tax-exempt muni yields increased by 31bps, ending the quarter with a slope of 188bps. 5 to 10-year maturities steepened by 15bps, finishing with a slope of 49bps.
- Modestly lengthened duration given attractive relative value on the long end of the muni curve.

	Min	Max
Option-Adjusted Duration (years)	3.93	6.31
Date ⁵	Aug 2019	May 2020

Other Key Themes

- Selectively added to hospital and corporate backed municipal bonds given attractive valuations. Reduced exposure to state general obligation debt.
- Decreased exposure to select taxable securities given attractive muni/treasury ratios.
- Added exposure to securities with 10-15 year maturities given curve steepness.

Source: Goldman Sachs Asset Management, Bloomberg, BVAL Muni. As of 30-Jun-2025. 1. Internal Rating Allocations of Non-Rated Securities include holdings of securities not rated by any major rating agency. Unrated securities held in the fund are internally rated by the municipal credit research team under Goldman Sachs Asset Management. The municipal credit research team utilizes rating standards and rating scales similar to those used by Fitch, S&P and Moody's to assess the credit quality of holdings of securities not rated by any major rating agency. 2. Highest Grade is assigned by the Goldman Sachs Asset Management municipal credit research team. The obligors' capacity to meet their financial commitments on the obligation is very or extremely strong. 3. Medium Grade is assigned by the Goldman Sachs Asset Management municipal credit research team. The obligors exhibit adequate protection parameters, but are more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. 4. Below Investment Grade is assigned by the Goldman Sachs Asset Management municipal credit research team. These obligors are regarded as having significant speculative characteristics. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposure to adverse conditions. 5. Minimum/Maximum duration range utilizes a start date of Dec 2014. See page 5 for additional credit rating disclosures. Fund holdings and allocations shown are unaudited, and may not be representative of current or future investments. Fund holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk. **Past performance does not guarantee future results, which may vary.**

Market Technicals/Outlook

Primary Market: Record Pace Accelerates

- The pace of new issuance picked up steam in the second quarter and remained on a record-breaking pace to start the year. Municipal bond issuance in April and May were in-line with last year's volumes. However, June's volumes were 17% larger than June of 2024 and set a record for tax-exempt issuance for that month. Overall volume for the quarter was 14% higher than 2Q 2024 and 34% above the pace of 1Q 2025.
- Despite the record supply and macroeconomic volatility, the new issue markets were generally orderly, and most deals were able to be placed throughout the quarter. As volumes have exceeded market expectations, market prognosticators have been revising their supply forecasts higher. Forecasts made at the end of last year were calling for supply in the lower \$500 billion range, while more recent revisions have 2025 volumes finishing the year in the mid-to-high \$500 billion range.

Municipal Issuance (\$bn)

Demand: Choppy, but Ultimately Positive

- Municipal funds began the quarter suffering severe outflows due to tax season selling and tariff-related volatility. The outflow cycle was highlighted by a single week's outflow of \$3.3 billion—the largest outflow recorded in over two years. That week also marked the highest level of outflows ever recorded for municipal ETFs. As the volatility settled down and tax season passed, investors re-engaged with the muni market and began adding to their muni exposure. May and June witnessed consistently positive inflows each week as long-term and high yield funds garnered strong inflows. In aggregate, 2Q 2025 amounted to \$5 billion of inflows, a slowdown of inflows related to the last quarter. Long-term and high yield funds garnered a disproportionate share of the inflows. Year to date, muni fund inflows have totaled close to \$10 billion, with the majority of the inflows going into ETFs.

Municipal Fund Flows (\$bn)

RISK CONSIDERATIONS

The **Goldman Sachs Dynamic Municipal Income Fund** invests primarily in municipal securities, the interest on which is exempt from regular federal income tax. The Fund may invest up to 100% of its net assets in private activity bonds, whose income may be subject to the federal alternative minimum tax. Investments in fixed income securities are subject to the risks associated with debt securities generally, **including credit, liquidity and interest rate risk. High yield, lower rated investments** involve greater price volatility and present greater risks, including greater liquidity risk, than higher rated fixed income securities. The Fund is subject to the risk that the liquidity of particular issuers or industries, or of all securities within a particular investment category, will shrink or disappear as a result of adverse economic, market or political events or adverse investor perception. The Fund may make investments that are or may become **illiquid**. At times, the Fund may be unable to sell illiquid investments without a substantial drop in price, if at all. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in bonds of similar projects or in particular types of **municipal securities**. Because the Fund may invest heavily in **investments in particular states and sectors**, the Fund is subject to greater risk of loss as a result of adverse events affecting those states and sectors than if its investments were not so focused. The Fund may be adversely impacted by **changes in tax rates and policies**, and is not suited for IRAs or other tax-exempt or deferred accounts. The Fund's investments are also subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions. The Fund's investments in **other investment companies** (including ETFs) subject it to additional expenses.

GENERAL DISCLOSURES

This material is not authorized for distribution unless preceded or accompanied by a current prospectus or summary prospectus, if applicable. Investors should consider a fund's objectives, risks, and charges and expenses, and read the summary prospectus, if available, and the prospectus carefully before investing or sending money. The summary prospectus, if available, and the [Prospectus](#) contains this and other information about the Fund.

Although certain information has been obtained from sources believed to be reliable, we do not guarantee its accuracy, completeness or fairness. We have relied upon and assumed without independent verification, the accuracy and completeness of all information available from public sources.

Fund holdings and allocations shown are unaudited, and may not be representative of current or future investments. Fund holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk.

Views and opinions expressed are for informational purposes only and do not constitute a recommendation by Goldman Sachs Asset Management to buy, sell, or hold any security. Views and opinions are current as of the date of this presentation and may be subject to change, they should not be construed as investment advice.

Goldman Sachs does not provide legal, tax or accounting advice, unless explicitly agreed between you and Goldman Sachs (generally through certain services offered only to clients of Private Wealth Management). Any statement contained in this presentation concerning U.S. tax matters is not intended or written to be used and cannot be used for the purpose of avoiding penalties imposed on the relevant taxpayer. Notwithstanding anything in this document to the contrary, and except as required to enable compliance with applicable securities law, you may disclose to any person the US federal and state income tax treatment and tax structure of the transaction and all materials of any kind (including tax opinions and other tax analyses) that are provided to you relating to such tax treatment and tax structure, without Goldman Sachs imposing any limitation of any kind. Investors should be aware that a determination of the tax consequences to them should take into account their specific circumstances and that the tax law is subject to change in the future or retroactively and investors are strongly urged to consult with their own tax advisor regarding any potential strategy, investment or transaction.

©2025 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is not guarantee of future results.

Morningstar Percentile and Absolute Rankings are based on the total return percentile rank within each Morningstar Category and do not account for a fund's sales charge (if applicable). Rankings will not be provided for periods less than one year. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. Historical percentile ranks are based on a snapshot of the funds as they were at the time of the calculation. Percentile ranks within categories are most useful in those groups that have a large number of funds. For small universes, funds will be ranked at the highest percentage possible. For instance, if there are only two specialty-utility funds with 10-year average total returns, Morningstar will assign a percentile rank of 1 to the top-performing fund, and the second fund will earn a percentile rank of 51 (indicating the fund underperformed 50% of the sample).

The expense ratios of the Fund, both current (net of any fee waivers or expense limitations) and before waivers (gross of any fee waivers or expense limitations) are as set forth above. Pursuant to a contractual arrangement, the Fund's waivers and/or expense limitations will remain in place through at least 7/29/25, and prior to such date the investment adviser may not terminate the arrangements without the approval of the Fund's Board of Trustees. Please refer to the Fund's prospectus for the most recent expenses.

The method of calculation of the 30-Day Standardized Subsidized Yield is mandated by the Securities Exchange Commission and is determined by dividing the net investment income per share earned during the last 30 days of the period by the maximum public offering price ("POP") per share on the last day of the period. This number is then annualized. **The 30-Day Standardized Subsidized Yield** reflects fee waivers and/or expense reimbursements recorded by the Fund during the period. Without waivers and/or reimbursements, yields would be reduced. This yield does not necessarily reflect income actually earned and distributed by the Fund and, therefore, may not be correlated with the dividends or other distributions paid to shareholders. The 30-Day Standardized Unsubsidized Yield does not adjust for any fee waivers and/or expense reimbursements in effect. If the Fund does not incur any fee waivers and/or expense reimbursements during the period, the 30-Day Standard Subsidized Yield and **30-Day Standardized Unsubsidized Yield** will be identical.

The Distribution Rate is the net annualized distribution rate for the month, based on the average daily income dividend during the period and the ending net asset value (NAV) per unit. The NAV is the market value of one share of the Fund.

All or a portion of the Fund's distributions may be treated for tax purposes as a return of capital, however, the final characterization of such distributions will be reported annually on Form 1099-DIV. The final tax status of the distributions may differ substantially from the above dividend information.

The Bloomberg Municipal Bond Index is a rules-based, market-value-weighted index engineered for the long-term tax-exempt bond market. To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. It is not possible to invest in an unmanaged index.

The Bloomberg Municipal Bond 1-10 Year Blend Index is a sub-component of the Bloomberg Municipal Bond Index. It is a rules-based, market-value-weighted index engineered for the long-term tax-exempt bond market. To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following agencies: Moody's, S&P, Fitch. It is not possible to invest directly in an unmanaged index.

Duration is a measure of the sensitivity of a bond's price to changes in interest rates. The option adjusted measure of duration takes into account the fact that yield changes may change the expected cash flows of the Fund's underlying securities because of the presence of an embedded option, such as a call or put.

A basis point is 1/100th of a percent.

Municipal/Treasury ratio is the yield of an AAA-rated Municipal bond divided by the yield of a similar Treasury security.

Tax loss harvesting is the action of realizing losses from time to time to offset potential gains in a portfolio.

Yield to Worst (YTW) is the interest rate that makes the present value of a bond's cash flows equal to the bond's price or initial investment, calculated by making worst-case scenario assumptions (excluding issuer default) on the bond by calculating the returns that would be received if provisions, including prepayment, call, put, and sinking fund, are used by the issuer. The YTW on derivatives, Treasury futures, and interest rate swaps incorporate the impact of current funding rates (due to a change in data source, funding rates on Treasury futures were not incorporated on the YTW calculation from approximately early 2020 through 9-Nov-2022. Since November 9, 2022, funding rates on Treasury futures have been incorporated). On a portfolio level, the YTW is a characteristic of the portfolio based on its holdings as of a particular date and is considered a long-term bond yield expressed as an annualized rate of return, assuming the portfolio securities are called with the lowest yield after running to each potential call date. The YTW does not represent the performance yield for a portfolio and may increase or decrease depending on the present value of a bond's market price as well as the number and size of payments remaining. As of April 14, 2023, the YTW has been capped at 15% in order to provide a more prudent and conservative representation.

This Fund and its respective benchmark have not been rated by an independent rating agency. The credit allocation provided refers to the Fund's underlying portfolio securities. For the purpose of determining compliance with any credit rating requirement, each Fund assigns a security, at the time of purchase, the highest rating by a Nationally Recognized Statistical Rating Organization (NRSRO) if the security is rated by more than one NRSRO. For this purpose, each Fund relies only on the ratings of the following NRSROs: Standard & Poor's, Moody's and Fitch, Inc. This method may differ from the method independently used by benchmark providers. Goldman Sachs Asset Management will use a single rating if that is the only one available. Securities that are not rated by all three agencies are reflected as such in the breakdown. In cases where the underlying security is insured, Goldman Sachs Asset Management uses the higher of the underlying security rating and the Insurer's rating. For those securities with both long-term and short-term ratings, Goldman Sachs Asset Management uses the short-term rating. Unrated securities may be purchased by a Fund if they are determined by the Investment Adviser to be of a credit quality consistent with the Fund's credit rating requirements. Unrated securities do not necessarily indicate low quality, and for such securities the investment adviser will evaluate the credit quality. Goldman Sachs Asset Management converts all ratings to the equivalent S&P major rating category when illustrating credit rating breakdowns. Ratings and fund/benchmark credit quality may change over time.

Non-Rated (NR) includes holdings of securities not rated by any major rating agency. Unrated securities held in the fund may be of higher, lower, or comparable credit quality to securities that have a credit rating from an NRSRO. Therefore, investors should not assume that the unrated securities in the fund increase or decrease the fund's overall credit quality.

Cash may include local currency, foreign currency, short-term investment funds, bank acceptances, commercial paper, margin, repurchase agreements, time deposits, variable-rate demand notes, and/or money market mutual funds. The Cash category may show a negative market value percentage as a result of a) the timing of trade date versus settlement date transactions and/or b) the portfolio's derivative investments, which are collateralized by the portfolio's available cash and securities. Such securities are AAA rated by an independent rating agency, have durations between -2 and 1 years, and are limited to the following sectors: governments, agencies, supranationals, corporates, and agency-backed adjustable-rate mortgages.

Goldman Sachs & Co. LLC, distributor of the Fund(s), is not a bank, and Fund shares distributed by Goldman Sachs & Co. LLC are neither deposits nor obligations of, nor endorsed, nor guaranteed by any bank or other insured depository institution, nor are they insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other government agency. Investment in the Funds involves risks, including possible loss of the principal amount invested.
