Goldman Sachs Dynamic Municipal Income Fund

Market Review

The Fund's benchmark, as represented by the Bloomberg Municipal Bond 1-10 Year Blend Index, returned 0.98% over the three months ended December 31, 2025.

The Federal Reserve delivered 25bp rate cuts at both the October and December meetings, with the Fed funds rate ending the year at 3.50-3.75%. Forward guidance from the Fed indicated more caution around future cuts, pending data and the perceived balance of risks.

While municipal supply remained heavy over the quarter, steady demand helped to dampen the volatility in the muni market relative to the treasury market. The municipal yield curve flattened, with yields in the 1 to 5 year portion of the muni yield curve ending the quarter 8-19 bps higher, while yields moved lower by 8-27 bps across 10-30 year maturities.

Performance in the muni market relative to the treasury market was mixed. For the fourth quarter, muni-to-treasury ratios cheapened by an average of +5% across the 1 to 5 year part of the curve and richened an average of -5% across 10- to 30-year notes. Ratios ended 2025 at 64%/65%/85% respectively for 5/10/30 years.

Fund Performance Attribution

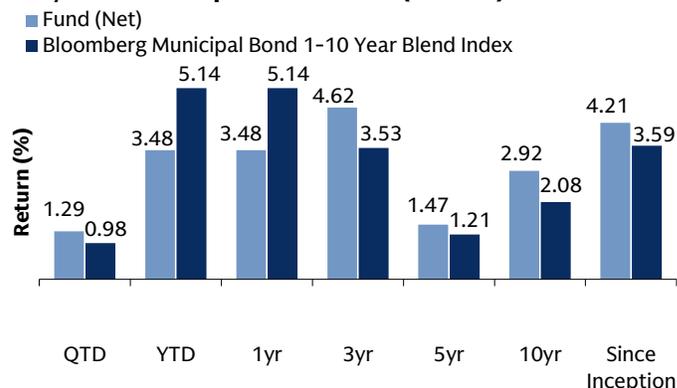

The Goldman Sachs Dynamic Municipal Income Fund returned 1.29% (I share, net) during the fourth quarter of 2025, outperforming the Bloomberg Municipal Bond 1-10 Year Blend Index by 32 basis points (bps, net).

- Longer than benchmark duration and curve positioning contributed to performance as rates rallied in the intermediate and long end of the municipal yield curve.
- Credit beta and overweight to medium and lower rated positions modestly contributed to performance as credit spreads were relatively flat over the quarter.
- Security selection broadly detracted. Negative selection within the project finance sector was partially offset by the positive contribution of selection among gas forward bonds.

Source: Goldman Sachs Asset Management, Morningstar. As of 31-Dec-2025. 'UST' US Treasury. I share class inception date: 15-Aug-1997. Tax-Equivalent calculations assume 37% Federal Tax Rate, 3.8% Affordable Health Care Tax. Assumes 100% of the fund is federally tax exempt. The returns represent past performance. Past performance does not predict future returns and does not guarantee future results, which may vary. The Fund's investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted above. Please visit our Web site at: <https://am.gs.com> to obtain the most recent month-end returns. The Standardized Total Returns are average annual total returns or cumulative total returns (only if the performance period is one year or less) as of the most recent calendar quarter-end. They assume reinvestment of all distributions at net asset value. Because Institutional Shares do not involve a sales charge, such a charge is not applied to their Standardized Total Returns.

The Morningstar Rating™ is calculated for funds with at least a 3-year history based on a risk-adjusted return measure that accounts for variation in a fund's monthly excess returns. Exchange-traded funds and open-ended mutual funds are considered a single population. In each category, the top 10% = 5 stars, next 22.5% = 4 stars, next 35% = 3 stars, next 22.5% = 2 stars, and bottom 10% = 1 star. Overall rating is derived from a weighted average of the returns associated with its 3-, 5-, and 10-year (if applicable) rating, excluding all sales charges. Weights are based on the # of months of total returns: 100% 3-year rating for 36-59 months, 60% 5-year rating/40% 3-year rating for 60-119 months, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months. See page 4-5 for definitions.

Fund Positioning Changes

Ratings Allocation

- Current municipal valuations appear reasonable based on both stable credit fundamentals and attractive absolute yields. BBB municipal spreads tightened by 1 bp over the fourth quarter and ended the year at 105 bps. HY municipal spreads tightened by 3 bps and ended the year at 199 bps.
- Increased Fund exposure to “BBB” rated and “NR” securities against a backdrop of heavy year end new issue supply.

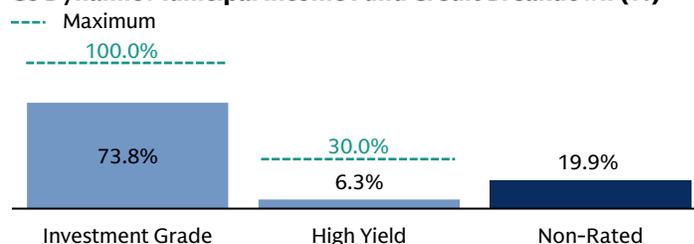

Duration Positioning

- The front end of the municipal curve flattened over the fourth quarter. AAA tax-exempt muni yields increased 18 bps and 8 bps in 2 and 5-year tenors. Yields decreased 19 bps and 11 bps in the 10 and 30-year tenors, respectively.
- Fund maintained longer than benchmark duration positioning over the quarter as intermediate and longer maturity yields moved lower.

Other Key Themes

- Reduced exposure to private activity bonds as spreads tightened during the quarter.
- Reduced exposure to taxable municipal securities, finding better value in traditional tax-exempt securities.
- Increased holdings in both specials assessment and corporate backed municipal sectors. Reduced exposure to holdings in the hospital and airport sectors.

Source: Goldman Sachs Asset Management, Bloomberg, BVAL Muni. As of 31-Dec-2025. 1. Internal Rating Allocations of Non-Rated Securities include holdings of securities not rated by any major rating agency. Unrated securities held in the fund are internally rated by the municipal credit research team under Goldman Sachs Asset Management. The municipal credit research team utilizes rating standards and rating scales similar to those used by Fitch, S&P and Moody's to assess the credit quality of holdings of securities not rated by any major rating agency. 2. Highest Grade is assigned by the Goldman Sachs Asset Management municipal credit research team. The obligors' capacity to meet their financial commitments on the obligation is very or extremely strong. 3. Medium Grade is assigned by the Goldman Sachs Asset Management municipal credit research team. The obligors exhibit adequate protection parameters, but are more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. 4. Below Investment Grade is assigned by the Goldman Sachs Asset Management municipal credit research team. These obligors are regarded as having significant speculative characteristics. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposure to adverse conditions. 5. Minimum/Maximum duration range utilizes a start date of Dec 2014. See page 5 for additional credit rating disclosures. Fund holdings and allocations shown are unaudited, and may not be representative of current or future investments. Fund holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk. **Past performance does not guarantee future results, which may vary.**

Market Technicals/Outlook

Supply: Elevated

- December new issue supply amounted to \$40 billion (\$38 billion tax-exempt and \$2 billion taxable). This was a decrease of 3% from November, and 28% higher versus December 2024. For the fourth quarter, supply was \$142 billion, 9% below previous quarter, but 16% higher than 24Q4.
- 2025 full-year municipal issuance totaled \$580 billion (\$547 billion tax-exempt and \$33 billion taxable). This is up 14% versus 2024 and a record year for total new issuance.
- We expect the recent increase in primary market supply to continue in 2026, as continued investment in new and updated infrastructure, the expiration of Covid related federal funding, and the greater inflationary pressure of the past few years have led to this supply surge.

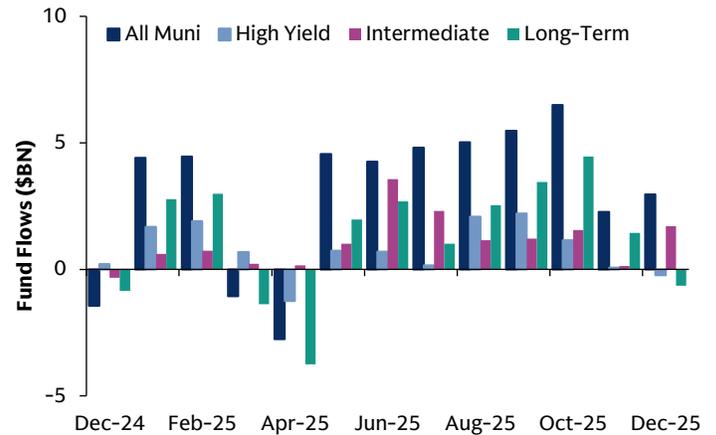

Municipal Issuance (\$bn)

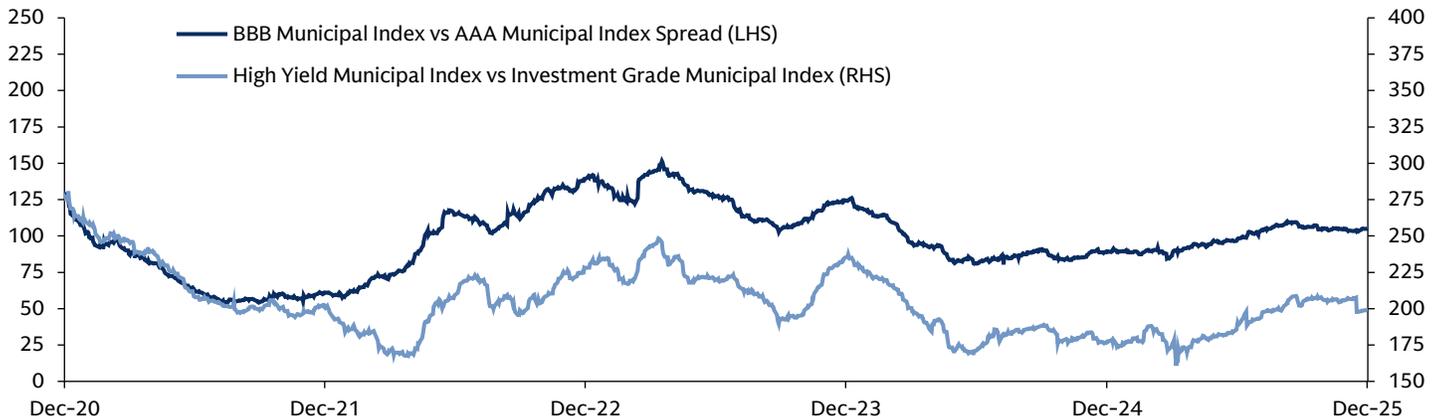

Demand: Positive

- Municipals saw positive inflows through December with an average of \$540 million each week. There was strong investment grade muni inflows, while high yield saw outflows over the month. Inflows were trending towards short-term and intermediate-term munis, with outflows at the long-term portion of the yield curve.
- Muni fund flows totaled \$3 billion for December. 2025 fund flows totaled \$51 billion (\$17 billion mutual funds and \$34 billion ETFs). Investment grade quality munis saw strong flows at the intermediate and long-end of the curve.

RISK CONSIDERATIONS

The **Goldman Sachs Dynamic Municipal Income Fund** invests primarily in municipal securities, the interest on which is exempt from regular federal income tax. The Fund may invest up to 100% of its net assets in private activity bonds, whose income may be subject to the federal alternative minimum tax. Investments in fixed income securities are subject to the risks associated with debt securities generally, including **credit, liquidity and interest rate risk**. **High yield, lower rated investments** involve greater price volatility and present greater risks, including greater liquidity risk, than higher rated fixed income securities. The Fund may make investments that are or may become **illiquid**. At times, the Fund may be unable to sell illiquid investments without a substantial drop in price, if at all. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in bonds of similar projects or in particular types of municipal securities. Because the Fund may invest heavily in **investments in particular states and sectors**, the Fund is subject to greater risk of loss as a result of adverse events affecting those states and sectors than if its investments were not so focused. The Fund may be adversely impacted by **changes in tax rates and policies, and is not suited for IRAs or other tax-exempt or deferred accounts**. The Fund's investments are also subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions. The Fund's investments in **other investment companies** (including ETFs) subject it to additional expenses.

General Disclosures

This material is not authorized for distribution unless preceded or accompanied by a current prospectus or summary prospectus, if applicable. Investors should consider a fund's objectives, risks, and charges and expenses, and read the summary prospectus, if available, and the prospectus carefully before investing or sending money. The summary prospectus, if available, and the [Prospectus](#) contains this and other information about the Fund.

THIS MATERIAL DOES NOT CONSTITUTE AN OFFER OR SOLICITATION IN ANY JURISDICTION WHERE OR TO ANY PERSON TO WHOM IT WOULD BE UNAUTHORIZED OR UNLAWFUL TO DO SO.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is not guarantee of future results.

Morningstar Percentile and Absolute Rankings are based on the total return percentile rank within each Morningstar Category and do not account for a fund's sales charge (if applicable). Rankings will not be provided for periods less than one year. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. Historical percentile ranks are based on a snapshot of the funds as they were at the time of the calculation. Percentile ranks within categories are most useful in those groups that have a large number of funds. For small universes, funds will be ranked at the highest percentage possible. For instance, if there are only two specialty-utility funds with 10-year average total returns, Morningstar will assign a percentile rank of 1 to the top-performing fund, and the second fund will earn a percentile rank of 51 (indicating the fund underperformed 50% of the sample). **Rankings for other share classes may vary.**

The expense ratios of the Fund, both current (net of any fee waivers or expense limitations) and before waivers (gross of any fee waivers or expense limitations) are as set forth above. Pursuant to a contractual arrangement, the Fund's waivers and/or expense limitations will remain in place through at least 7/29/26, and prior to such date the investment adviser may not terminate the arrangements without the approval of the Fund's Board of Trustees. Please refer to the Fund's prospectus for the most recent expenses.

The method of calculation of the **30-Day Standardized Subsidized Yield** is mandated by the Securities Exchange Commission and is determined by dividing the net investment income per share earned during the last 30 days of the period by the maximum public offering price of the Fund ("POP") per share on the last day of the period. This number is then annualized. The **30-Day Standardized Subsidized Yield** reflects fee waivers and/or expense reimbursements recorded by the Fund during the period. Without waivers and/or reimbursements, yields would be reduced. This yield does not necessarily reflect income actually earned and distributed by the Fund and, therefore, may not be correlated with the dividends or other distributions paid to shareholders. The 30-Day Standardized Unsubsidized Yield does not adjust for any fee waivers and/or expense reimbursements in effect. If the Fund does not incur any fee waivers and/or expense reimbursements during the period, the 30-Day Standard Subsidized Yield and 30-Day Standardized Unsubsidized Yield will be identical. All or a portion of the Fund's distributions may be treated for tax purposes as a return of capital, however, the final characterization of such distributions will be reported annually on Form 1099-DIV. The final tax status of the distributions may differ substantially from the above dividend information. Dividends are accrued daily and paid monthly. Distributions from net investment income, if any, are normally declared daily and paid monthly. Distributions from net capital gains, if any, are normally declared and paid annually. **Fiscal year to date, the estimated Return of Capital component of the current distributions was less than 20%.** The ultimate composition of these distributions may vary from the estimate provided due to a variety of factors. As a result, shareholders should not use the information provided in this notice for tax reporting purposes.

The Bloomberg Municipal Bond Index is a rules-based, market-value-weighted index engineered for the long-term tax-exempt bond market. To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. It is not possible to invest in an unmanaged index.

The Bloomberg Municipal Bond 1-10 Year Blend Index is a sub-component of the Bloomberg Municipal Bond Index. It is a rules-based, market-value-weighted index engineered for the long-term tax-exempt bond market. To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following agencies: Moody's, S&P, Fitch. It is not possible to invest directly in an unmanaged index.

Duration is a measure of the sensitivity of a bond's price to changes in interest rates. The option adjusted measure of duration takes into account the fact that yield changes may change the expected cash flows of the Fund's underlying securities because of the presence of an embedded option, such as a call or put.

Index Benchmarks

Indices are unmanaged. The figures for the index reflect the reinvestment of all income or dividends, as applicable, but do not reflect the deduction of any fees or expenses which would reduce returns. Investors cannot invest directly in indices.

The indices referenced herein have been selected because they are well known, easily recognized by investors, and reflect those indices that the Investment Manager believes, in part based on industry practice, provide an appropriate benchmark against which to evaluate the investment or broader market described herein.

References to indices, benchmarks or other measures of relative market performance over a specified period of time are provided for your information only and do not imply that the portfolio will achieve similar results. The index composition may not reflect the manner in which a portfolio is constructed. While an adviser seeks to design a portfolio which reflects appropriate risk and return features, portfolio characteristics may deviate from those of the benchmark.

The Distribution Rate is the net annualized distribution rate for the month, based on the average daily income dividend during the period and the ending NAV per unit.

A basis point is 1/100th of a percent.

Municipal/Treasury ratio is the yield of an AAA-rated Municipal bond divided by the yield of a similar Treasury security.

Tax loss harvesting is the action of realizing losses from time to time to offset potential gains in a portfolio.

Yield to Worst (YTW) is the interest rate that makes the present value of a bond's cash flows equal to the bond's price or initial investment, calculated by making worst-case scenario assumptions (excluding issuer default) on the bond by calculating the returns that would be received if provisions, including prepayment, call, put, and sinking fund, are used by the issuer. The YTW on derivatives, Treasury futures, and interest rate swaps incorporate the impact of current funding rates (due to a change in data source, funding rates on Treasury futures were not incorporated on the YTW calculation from approximately early 2020 through 9-Nov-2022. Since November 9, 2022, funding rates on Treasury futures have been incorporated). On a portfolio level, the YTW is a characteristic of the portfolio based on its holdings as of a particular date and is considered a long-term bond yield expressed as an annualized rate of return, assuming the portfolio securities are called with the lowest yield after running to each potential call date. The YTW does not represent the performance yield for a portfolio and may increase or decrease depending on the present value of a bond's market price as well as the number and size of payments remaining. As of April 14, 2023, the YTW has been capped at 15% in order to provide a more prudent and conservative representation.

This Fund and its respective benchmark have not been rated by an independent rating agency. The credit allocation provided refers to the Fund's underlying portfolio securities. For the purpose of determining compliance with any credit rating requirement, each Fund assigns a security, at the time of purchase, the highest rating by a Nationally Recognized Statistical Rating Organization (NRSRO) if the security is rated by more than one NRSRO. For this purpose, each Fund relies only on the ratings of the following NRSROs: Standard & Poor's, Moody's and Fitch, Inc. This method may differ from the method independently used by benchmark providers. Goldman Sachs Asset Management will use a single rating if that is the only one available. Securities that are not rated by all three agencies are reflected as such in the breakdown. In cases where the underlying security is insured, Goldman Sachs Asset Management uses the higher of the underlying security rating and the Insurer's rating. For those securities with both long-term and short-term ratings, Goldman Sachs Asset Management uses the short-term rating. Unrated securities may be purchased by a Fund if they are determined by the Investment Adviser to be of a credit quality consistent with the Fund's credit rating requirements. Unrated securities do not necessarily indicate low quality, and for such securities the investment adviser will evaluate the credit quality. Goldman Sachs Asset Management converts all ratings to the equivalent S&P major rating category when illustrating credit rating breakdowns. Ratings and fund/benchmark credit quality may change over time.

Non-Rated (NR) includes holdings of securities not rated by any major rating agency. Unrated securities held in the fund may be of higher, lower, or comparable credit quality to securities that have a credit rating from an NRSRO. Therefore, investors should not assume that the unrated securities in the fund increase or decrease the fund's overall credit quality.

Cash may include local currency, foreign currency, short-term investment funds, bank acceptances, commercial paper, margin, repurchase agreements, time deposits, variable-rate demand notes, and/or money market mutual funds. The Cash category may show a negative market value percentage as a result of a) the timing of trade date versus settlement date transactions and/or b) the portfolio's derivative investments, which are collateralized by the portfolio's available cash and securities. Such securities are AAA rated by an independent rating agency, have durations between -2 and 1 years, and are limited to the following sectors: governments, agencies, supranationals, corporates, and agency-backed adjustable-rate mortgages.

Goldman Sachs & Co. LLC, distributor of the Fund(s), is not a bank, and Fund shares distributed by Goldman Sachs & Co. LLC are neither deposits nor obligations of, nor endorsed, nor guaranteed by any bank or other insured depository institution, nor are they insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other government agency. Investment in the Funds involves risks, including possible loss of the principal amount invested.
