* We identify two broad categories of funds to help investors think about how to construct their overall investment portfolio. We describe the following as **"Core"**: (A) Equity funds with a global investment remit or those mainly focused on US and European markets, given the size and transparency of these markets. (B) Fixed income funds with a global investment remit or those mainly focused on US, European and UK markets and invest predominantly in investment grade debt, including government. (C) Multi asset funds with a multi asset benchmark. All other funds we describe as **"Complements"**. Both Core and Complement funds can vary in risk level and those terms are not meant to indicate the risk level of the funds. There is no guarantee that these objectives will be met.

For regionally focused investment portfolios we understand that the categorisation may be different from the perspective of different investors. **Consult your financial adviser before investing to help determine if an investment in this fund and the amount of the investment would be suitable.**

Fund Objective and Investment Policy

The investment objective of the Fund is to implement a trading strategy that seeks to approximate the returns of hedge funds as a broad asset class. Returns of hedge funds can be viewed as being composed of both “beta” (or varying market exposure) or “alpha” (or manager skill).

Asset Class Breakdown

⁽¹⁾ The GS Absolute Return Tracker Portfolio (I (Acc.) shareclass) commenced operations on January 13th, 2015. Prior to that date, the performance of the GS Absolute Return Tracker (I (Acc.) shareclass) is that of the C (USD) shareclass of the GS Absolute Return Tracker Portfolio, with fees and expense adjustment. The C (USD) shareclass of the GS Absolute Return Tracker Portfolio commenced operations on February 6th, 2008 and was merged to the I (Acc.) shareclass. ⁽²⁾ The ongoing charges figure is based on expenses during the previous year. See details in the Key Investor Information Document. The ongoing charges are the fees the fund charges to investors to cover the day-to-day costs of running the funds. They are taken from the fund and impacts on the fund's return. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations. All charges will be paid out by the Fund, which will impact on the overall return of the Fund. ⁽³⁾ The 3 Month Libor Index is quoted month-end with income reinvested and, in contrast to the Portfolio, shown without the deduction of any expenses. Effective July 1, 2023, Reference Benchmark returns hereby stated include a transaction cost component. ⁽⁴⁾ Fund returns are shown net of applicable ongoing fees within the portfolio, with dividends re-invested using the ex-dividend NAV. These returns are for comparison of performance against specified index. As the investor may be liable to other fees, charges and taxes, they are not meant to provide a measure of actual return to investors. The performance data do not take account of the commissions and costs incurred on the issue and redemption of shares. ⁽⁵⁾ Effective 31st December 2021, the Portfolio's reference benchmark changed from 3 Month Libor to ICE BofA 3month US T-Bill. The ICE BofA 3month is quoted month-end with income reinvested and, in contrast to the Portfolio, shown without the deduction of any expenses. Effective July 1, 2023, Reference Benchmark returns hereby stated include a transaction cost component.

Important Risk Considerations

- **Counterparty risk** a party that the Portfolio transacts with may fail to meet its obligations which could cause losses.
- **Custodian risk** insolvency, breaches of duty of care or misconduct of a custodian or subcustodian responsible for the safekeeping of the Portfolio's assets can result in loss to the Portfolio.
- **Derivatives risk** derivative instruments are highly sensitive to changes in the value of the underlying asset that they are based on. Certain derivatives may result in losses greater than the amount originally invested.
- **Exchange rate risk** changes in exchange rates may reduce or increase the returns an investor might expect to receive independent of the performance of such assets. If applicable, investment techniques used to attempt to reduce the risk of currency movements (hedging), may not be effective. Hedging also involves additional risks associated with derivatives.
- **Historical Performance Data** the composition of the Strategy is determined by reference to historical data. However, past performance is not an indicator of future performance. The performance of a market may differ to that indicated by a mathematical formula based on historical data, which in turn may adversely affect the value of your investment.
- **Interest rate risk** when interest rates rise, bond prices fall, reflecting the ability of investors to obtain a more attractive rate of interest on their money elsewhere. Bond prices are therefore subject to movements in interest rates which may move for a number of reasons, political as well as economic.
- **Leverage risk** the Portfolio may operate with a significant amount of leverage. Leverage occurs when the economic exposure created by the use of derivatives is greater than the amount invested. A leveraged Portfolio may result in large fluctuations in the value of the Portfolio and therefore entails a high degree of risk including the risk that losses may be substantial.
- **Liquidity risk** the Portfolio may not always find another party willing to purchase an asset that the Portfolio wants to sell which could impact the Portfolio's ability to meet redemption requests on demand.
- **Market risk** the value of assets in the Portfolio is typically dictated by a number of factors, including the confidence levels of the market in which they are traded.
- **Operational risk** material losses to the Portfolio may arise as a result of human error, system and/or process failures, inadequate procedures or controls.
- **Use of mathematical formulae** the Investment Adviser expects to use mathematical formulae, developed by Goldman Sachs, to implement the Strategy. The use of such formulae may be subject to a number of limitations and may result in the Strategy performing differently than expected as a result of the design of the formulae, inputs into the formulae or other factors.
- **Volatility risk** an investment in the Portfolio can expose investors to higher volatility levels than is normally associated with "balanced" investment strategies, therefore the value of their investment may be subject to significant changes in the short term.
- Complete information on the risks of investing in the fund are set out in the fund's prospectus.

Glossary

- **Excess returns** – The return of the fund in excess of the benchmark/index return (annualised).
- **Historical Volatility of Portfolio** – Illustrates the dispersion of the fund's realized monthly returns around the average monthly return, indicating how volatile the fund's return is over time. The higher the number the more volatile the fund's returns.
- **Net Asset Value** – Represents the net assets of the fund (ex-dividend) divided by the total number of shares issued by the fund.
- **Ongoing Charges** – The ongoing charges figure is based on the fund's expenses during the previous 12 months, on a rolling basis. It excludes transaction costs and performance fees incurred by the fund.
- **Other Expenses** – Fees deducted from the Fund's assets incurred as part of the Fund's operations, including, where applicable, costs incurred by the Fund when investing in other funds.
- **Swing pricing** – The swing factor represents the factor in place month end and is subject to change on any Dealing Day depending on prevailing market conditions.
