

Summary Prospectus

December 29, 2024

GOLDMAN SACHS ACCESS U.S. PREFERRED STOCK AND HYBRID SECURITIES ETF

Ticker: GPRF Stock Exchange: The NASDAQ Stock Market LLC

Before you invest, you may want to review the Goldman Sachs Access U.S. Preferred Stock and Hybrid Securities ETF (the “Fund”) Prospectus, which contains more information about the Fund and its risks. You can find the Fund’s Prospectus, reports to shareholders and other information about the Fund online at dfinview.com/GoldmanSachs. You can also get this information at no cost by calling 800-621-2550 or by sending an e-mail request to gs-funds-document-requests@gs.com. The Fund’s Prospectus and Statement of Additional Information (“SAI”), both dated December 29, 2024, are incorporated by reference into this Summary Prospectus.

INVESTMENT OBJECTIVE

The Goldman Sachs Access U.S. Preferred Stock and Hybrid Securities ETF (the “Fund”) seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the FTSE Goldman Sachs US Preferred Stock and Hybrids Index (the “Index”).

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell Shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.45%
Distribution and Service (12b-1) Fee	0.00%
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.45%

¹ The Fund’s “Other Expenses” have been estimated to reflect expenses expected to be incurred during the first fiscal year.

EXPENSE EXAMPLE

This Example is intended to help you compare the cost of owning Shares of the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$46	\$144

PORTFOLIO TURNOVER

The Fund may pay transaction costs when it buys and sells securities or instruments (i.e., “turns over” its portfolio). A high rate of portfolio turnover may result in increased transaction costs, including brokerage commissions, which must be borne by the Fund and its shareholders, and is also likely to result in higher short-term capital gains for taxable shareholders. These costs are not reflected in total annual fund operating expenses or in the expense example above, but are reflected in the Fund’s performance. The Fund’s portfolio turnover rate for the period since the commencement of operations on July 30, 2024 through August 31, 2024 was 0% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to achieve its investment objective by investing at least 80% of its assets (exclusive of collateral held from securities lending) in securities included in its underlying index.

The Index measures the performance of preferred stock and other hybrid instruments (“Preferred Securities”) issued in the U.S. and denominated in USD. The Index is created from a starting universe of the FTSE US Preferred and Hybrids Index (the “Reference Index”) and filters out instruments that have a yield to worst of less than -5%, subject to a 2.5% buffer (i.e., for securities in the Reference Index the previous month, they are only screened out of the Index if the yield to worst is less than -7.5%). An instrument’s yield to worst is a measure of the lowest possible yield that can be received on a bond with an early retirement provision.

Preferred Securities are instruments that exhibit both bond and equity-like features. Preferred securities in the Index have a minimum maturity of at least one year and have minimum outstanding sizes of \$100 million for par amounts of \$25 or minimum outstanding sizes of \$250 million for par amounts of \$1,000. Preferred Securities in the Index have a minimum credit quality of B- by S&P Global Ratings and/or Fitch Ratings, or B3 by Moody’s credit ratings and thus may be non-investment grade securities (which are considered “junk bonds” and “speculative”). Preferred Securities in the Index may be fixed-rate, floating rate, or fixed-to-floating rate. Dividends or coupons for these securities may be cumulative or non-cumulative with a deferrable dividend or coupon that does not trigger a default. Securities included in the Index may be subordinated or senior notes designed to trade like preferred securities (also known as “baby bonds”). Preferred Securities

included in the Index may be perpetual or have a legal maturity date. Generally, convertible securities are excluded from the Index; however, securities issued with conversion at a banking regulator's discretion are eligible. Based on the Reference Index, the Index does not include certain securities, including index-linked securities and those issued under Rule 144A, retail-focused securities, including structured products and private placements, bills, zero-coupon bonds or sinking funds.

The Index is sponsored by FTSE Russell (the "Index Provider"). The Index is market capitalization-weighted and is normally rebalanced monthly on the last business day of each month.

Given the Fund's investment objective of attempting to track the Index, the Fund does not follow traditional methods of active investment management, which may involve buying and selling securities based upon analysis of economic and market factors.

The Index Provider constructs the Index in accordance with a rules-based methodology that involves two steps:

Step 1:

In the first step, the Index Provider defines a universe (the "Universe") of potential index constituents by identifying securities that are constituents of the Reference Index. The Reference Index is designed to provide a performance measure of Preferred Securities issued in the U.S. and denominated in USD.

Step 2:

In the second step, the Index Provider excludes instruments from the Universe with a yield to worst of less than -5%, subject to a 2.5% buffer (*i.e.*, for securities in the Reference Index the previous month, they are only screened out of the Index if the yield to worst is less than -7.5%).

As of November 30, 2024, the Index consisted of 480 securities with a market capitalization range of between approximately \$84.88 million and \$3.44 billion. The components of the Index may change over time.

The Investment Adviser uses a representative sampling strategy to manage the Fund. "Representative sampling" is an indexing strategy in which the Fund invests in a representative sample of constituent securities that has a collective investment profile similar to that of the Index. The securities selected for investment by the Fund are expected to have, in the aggregate, investment characteristics, governance characteristics, fundamental characteristics and liquidity measures similar to those of the Index. The Fund may or may not hold all of the securities in the Index.

The Fund may concentrate its investments (*i.e.*, hold more than 25% of its total assets) in a particular industry or group of industries to the extent that its Index is concentrated. As of the date of this Prospectus, the Index is concentrated in the group of industries comprising the financial sector. The degree to which components of the Index represent certain sectors or industries may change over time.

PRINCIPAL RISKS OF THE FUND

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation ("FDIC") or any government agency. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective. Investments in the Fund

involve substantial risks which prospective investors should consider carefully before investing. The Fund's principal risks are presented below in alphabetical order, and not in the order of importance or potential exposure.

Calculation Methodology Risk. The Index relies on various sources of information to assess the criteria of issuers included in the Index, including fundamental information that may be based on assumptions and estimates. Neither the Fund, the Index Provider, nor the Investment Adviser can offer assurances that the Index's calculation methodology or sources of information will provide an accurate assessment of included issuers or a correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the Index.

Call/Prepayment Risk. An issuer could exercise its right to pay principal on an obligation held by the Fund earlier than expected. This may happen when there is a decline in interest rates, when credit spreads change, or when an issuer's credit quality improves. Under these circumstances, the Fund may be unable to recoup all of its initial investment and will also suffer from having to reinvest in lower-yielding securities.

Credit/Default Risk. An issuer or guarantor of fixed income securities or instruments held by the Fund may default on its obligation to pay interest and repay principal or default on any other obligation. Additionally, the credit quality of securities or instruments may deteriorate rapidly, which may impair the Fund's liquidity and cause significant deterioration in net asset value ("NAV"). These risks are heightened in market environments where interest rates are rising as well as in connection with the Fund's investments in non-investment grade fixed income securities.

Extension Risk. An issuer could exercise its right to pay principal on an obligation held by the Fund later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.

Financial Services Industry Group Risk. An adverse development in the financial services industry group, including U.S. and foreign banks, broker-dealers, insurance companies, finance companies (*e.g.*, automobile finance) and related asset-backed securities, may affect the value of the Fund's investments more than if the Fund were not invested to such a degree in this industry group. Companies in the financial services industry group may be particularly susceptible to certain economic factors such as interest rate changes, fiscal, regulatory and monetary policy and general economic cycles.

Hybrid Securities Risk — In general, hybrid securities are junior to an issuer's senior debt instruments; therefore, they are subject to more significant credit risk than those senior debt instruments. Many hybrid securities are subject to provisions permitting their issuers to omit or defer distributions under specified circumstances. Hybrid securities may have restricted or no voting rights and may have substantially lower overall liquidity than many other securities.

Index Risk. The Fund will be negatively affected by general declines in the securities and asset classes represented in the Index. In addition, because the Fund is not "actively" managed, unless a specific security is removed from the Index, the Fund generally would not sell a security because the security's issuer was in financial trouble, and the Fund does not take defensive positions in declining markets. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Index. The Index Provider may utilize third party data in constructing the Index, but it does not guarantee the accuracy or availability of any

such third party data. The Index Provider makes no guarantee with respect to the accuracy, availability or timeliness of the production of the Index, or the suitability of the Index for the purpose to which it is being put by GSAM.

Industry Concentration Risk. In following its methodology, the Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or group of industries. To the extent that the Index concentrates in the securities of issuers in a particular industry or group of industries, the Fund also may concentrate its investments to approximately the same extent. By concentrating its investments in an industry or group of industries, the Fund may face more risks than if it were diversified broadly over numerous industries or groups of industries. If the Index is not concentrated in a particular industry or group of industries, the Fund will not concentrate in a particular industry or group of industries.

Interest Rate Risk. When interest rates increase, fixed income securities or instruments held by the Fund will generally decline in value.

Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. Changing interest rates may have unpredictable effects on the markets, may result in heightened market volatility and may detract from Fund performance. In addition, changes in monetary policy may exacerbate the risks associated with changing interest rates. Funds with longer average portfolio durations will generally be more sensitive to changes in interest rates than funds with a shorter average portfolio duration. Fluctuations in interest rates may also affect the liquidity of fixed income securities and instruments held by the Fund.

Large Shareholder Risk. Certain shareholders, including other funds advised by the Investment Adviser, may from time to time own a substantial amount of the Fund's Shares. In addition, a third party investor, the Investment Adviser or an affiliate of the Investment Adviser, an authorized participant, a lead market maker, or another entity (*i.e.*, a seed investor) may invest in the Fund and hold its investment solely to facilitate commencement of the Fund or to facilitate the Fund's achieving a specified size or scale. Any such investment may be held for a limited period of time. There can be no assurance that any large shareholder would not redeem its investment, that the size of the Fund would be maintained at such levels or that the Fund would continue to meet applicable listing requirements. Redemptions by large shareholders could have a significant negative impact on the Fund, including on the Fund's liquidity. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the NASDAQ Stock Market LLC ("NASDAQ") and may, therefore, have a material upward or downward effect on the market price of the Shares.

Market Risk. The value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions throughout the world due to increasingly interconnected global economies and financial markets. Events such as war, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, rapid interest rate changes, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats could also significantly impact the Fund and its investments.

Market Trading Risk. The NAV of the Fund and the value of your investment may fluctuate. Market prices of Shares may fluctuate, in some cases significantly, in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Fund faces numerous market trading risks, including disruptions to creations and redemptions, the existence of extreme market volatility or

potential lack of an active trading market for Shares. Any of these factors, among others, may result in Shares trading at a significant premium or discount to NAV, which will be reflected in the intraday bid/ask spreads and/or the closing price of Shares as compared to NAV. In addition, because liquidity in certain underlying securities may fluctuate, Shares may trade at a larger premium or discount to NAV than shares of other kinds of ETFs. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may pay more for, or receive less than, the underlying value of the Shares, respectively. Additionally, in stressed market conditions, the market for Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings.

Non-Investment Grade Fixed Income Securities Risk. Non-investment grade fixed income securities and unrated securities of comparable credit quality (commonly known as "junk bonds") are considered speculative and are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific issuer developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less liquidity.

Preferred Securities Risk. Preferred Securities are contractual obligations that entail rights to distributions declared by the issuer's board of directors but may allow the issuer to defer or suspend distributions for a certain period of time. To the extent that the Fund owns a Preferred Security whose issuer has deferred or suspended distributions, the Fund may be required to account for the distribution that has been deferred or suspended for tax purposes, even though it may not have received this income in cash. Further, Preferred Securities may lose significant value if distributions are deferred, suspended or not declared. Preferred Securities may also allow the issuer to convert Preferred Securities into the issuer's common stock. Preferred Securities that are convertible to common stock may lose value if the common stock into which Preferred Securities may be converted loses value. Preferred Securities are subject to more significant credit risk than traditional fixed income securities because the rights of holders of Preferred Securities are junior to the rights of the bond and debt holders of an issuer.

Sampling Risk. The Fund's use of a representative sampling approach will result in its holding a smaller number of securities than are in the Index. As a result, an adverse development respecting a security held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Index. Conversely, a positive development relating to a security in the Index that is not held by the Fund could cause the Fund to underperform the Index. To the extent the assets in the Fund are smaller, these risks will be greater.

Seed Investor Risk. GSAM and/or its affiliates may make payments to one or more investors that contribute seed capital to the Fund. Such payments may continue for a specified period of time and/or until a specified dollar amount is reached. Those payments will be made from the assets of GSAM and/or such affiliates (and not the Fund). Seed investors may contribute all or a majority of the assets in the Fund. There is a risk that such seed investors may redeem their investments in the Fund, particularly after payments from GSAM and/or its affiliates have ceased. As with redemptions by other large shareholders, such redemptions could have a significant negative impact on the Fund, including on the Fund's liquidity and the market price of the Fund's shares.

Tracking Error Risk. Tracking error is the divergence of the Fund’s performance from that of the Index. The performance of the Fund may diverge from that of the Index for a number of reasons. Tracking error may occur because of transaction costs, the Fund’s holding of cash, changes to the Index or the need to meet new or existing regulatory requirements. Unlike the Fund, the returns of the Index are not reduced by investment and other operating expenses, including the trading costs associated with implementing changes to its portfolio of investments. Tracking error risk may be heightened during times of market volatility or other unusual market conditions. In addition, the Fund’s use of a representative sampling approach may cause the Fund’s returns to not be as well correlated with the return of the Index as would be the case if the Fund purchased all of the securities in the Index in the proportions in which they are represented in the Index. These risks may be greater given the Fund’s investment in non-investment grade securities with more volatility in price and liquidity. The Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the Investment Company Act, to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of market restrictions or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Valuation Risk. The sale price the Fund could receive for a security may differ from the Fund’s valuation of the security and may differ from the value used by the Index, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. The Fund relies on various sources to calculate its NAV. The information may be provided by third parties that are believed to be reliable, but the information may not be accurate due to errors by such pricing sources, technological issues or otherwise. NAV calculation may also be impacted by operational risks arising from factors such as failures in systems and technology.

PERFORMANCE

As the Fund had not operated for a full calendar year as of the date of the Prospectus, there is no performance information quoted for the Fund. Updated performance information is available at no cost at am.gs.com or by calling the appropriate phone number on the back cover of the Prospectus.

PORTFOLIO MANAGEMENT

Goldman Sachs Asset Management, L.P. is the investment adviser for the Fund (the “Investment Adviser” or “GSAM”).

Portfolio Managers: David Westbrook, Vice President, Todd Henry, Vice President, and Gary Kessler, Vice President, have managed the Fund since June 2024.

BUYING AND SELLING FUND SHARES

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because Shares trade at market prices, rather than NAV, Shares of the Fund may trade at a price greater than NAV (*i.e.*, a premium) or less than NAV (*i.e.*, a discount).

You may incur costs attributable to the difference between the highest price a buyer is willing to pay for Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) (the “bid-ask spread”) when buying or selling Shares in the secondary market.

Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at am.gs.com.

TAX INFORMATION

The Fund’s distributions are taxable, and will be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account. Investments made through tax-deferred arrangements may become taxable upon withdrawal from such arrangements.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), GSAM or other related companies may pay the intermediary for the sale of Fund Shares or related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
