Goldman Sachs U.S. Mortgages Fund—Summary

INVESTMENT OBJECTIVE

The Goldman Sachs U.S. Mortgages Fund (the “Fund”) seeks a high level of total return consisting of income and capital appreciation.

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Shareholder Fees

(fees paid directly from your investment)

	Service	Class R
Maximum Sales Charge (Load) Imposed on Purchases (as a percentage of offering price)	None	None
Maximum Deferred Sales Charge (Load) (as a percentage of the lower of original purchase price or sale proceeds)	None	None

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

	Service	Class R
Management Fees	0.34%	0.34%
Distribution and/or Service (12b-1) Fees	0.25%	0.50%
Other Expenses ¹	0.50%	0.33%
Total Annual Fund Operating Expenses	1.09%	1.17%
Expense Limitation ²	(0.13)%	(0.13)%
Total Annual Fund Operating Expenses After Limitation	0.96%	1.04%

¹ The “Other Expenses” for Service and Class R Shares have been estimated to reflect expenses expected to be incurred during the current fiscal year.

² The Investment Adviser has agreed to reduce or limit “Other Expenses” (excluding acquired fund fees and expenses, transfer agency fees and expenses, taxes, interest, brokerage fees, expenses of shareholder meetings, litigation and indemnification, and extraordinary expenses) to 0.074% of the Fund’s average daily net assets. This arrangement will remain in effect through at least July 29, 2027, and prior to such date the Investment Adviser may not terminate the arrangement without the approval of the Board of Trustees.

EXPENSE EXAMPLE

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in Service and/or Class R Shares of the Fund for the time periods indicated and then redeem all of your Service and/or Class R Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same (except that the Example incorporates any applicable fee waiver and/or expense limitation arrangements for only the first year). Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Service Shares	\$98	\$334	\$588	\$1,317
Class R Shares	\$106	\$359	\$631	\$1,409

PORTFOLIO TURNOVER

The Fund pays transaction costs when it buys and sells securities or instruments (i.e., “turns over” its portfolio). A high rate of portfolio turnover may result in increased transaction costs, which must be borne by the Fund and its shareholders, and is also likely to result in higher short-term capital gains for taxable shareholders. These costs are not reflected in the annual fund operating expenses or in the expense example above, but are reflected in the Fund’s performance. The Fund’s portfolio turnover rate for the fiscal year ended March 31, 2025 was 1896% of the average value of its portfolio.

PRINCIPAL STRATEGY

The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at the time of purchase) (“Net Assets”) in securities representing direct or indirect interests in or that are collateralized by adjustable rate and fixed rate mortgage loans or other mortgage-related securities (“Mortgage-Backed Securities”) of U.S. issuers, including agency issued Mortgage-Backed Securities (“Agency Mortgage-Backed Securities”). The Fund generally expects to invest at least 90% of its Net Assets in Agency Mortgage-Backed Securities in addition to other securities issued or guaranteed by the U.S. government, its agencies, instrumentalities or sponsored enterprises (“U.S. Government Securities”). A U.S. issuer is an issuer economically tied to the United States. The Fund may also invest in mortgage dollar rolls, asset-backed securities (including collateralized loan obligations (“CLOs”)) and foreign securities. The Fund also intends to invest in derivatives, including (but not limited to) interest rate futures, interest rate swaps and credit default swaps, primarily to manage the Fund’s duration, hedge the Fund’s portfolio risks, and/or gain exposure to certain fixed income securities.

The Fund may gain exposure to Agency Mortgage-Backed Securities through several methods, including by utilizing to-be-announced (“TBA”) agreements in Agency Mortgage-Backed Securities or through the use of reverse repurchase agreements. TBA agreements for Agency Mortgage-Backed Securities are standardized contracts for future delivery of fixed-rate mortgage pass-through securities in which the exact mortgage pools to be delivered are not specified until shortly before settlement. A reverse repurchase agreement enables the Fund to gain exposure to specified pools of Agency Mortgage-Backed Securities by purchasing them on a forward settling basis and using the proceeds of the reverse repurchase agreement to settle the trade.

The Fund may also seek to obtain exposure to fixed income investments through investments in affiliated or unaffiliated investment companies, including exchange-traded funds (“ETFs”).

The Fund’s investments must be rated, at the time of purchase, at least BBB– by S&P Global Ratings (“S&P”), at least Baa3 by Moody’s Investors Service, Inc. (“Moody’s”), or have a comparable credit rating by another nationally recognized statistical rating organization (“NRSRO”) or, if unrated, must be determined by the Investment Adviser to be of comparable credit quality.

The Fund’s target duration range under normal interest rate conditions is expected to approximate that of the Bloomberg U.S. Securitized Bond Index plus or minus 0.5 years, and over the past five years ended June 30, 2025, the duration of this Index has ranged between 2.28 and 6.59 years. “Duration” is a measure of a debt security’s price sensitivity to changes in interest rates. The longer the duration of the Fund (or an individual debt security), the more sensitive its market price to changes in interest rates. For example, if market interest rates increase by 1%, the market price of a debt security with a positive duration of 3 years will generally decrease by approximately 3%. Conversely, a 1% decline in market interest rates will generally result in an increase of approximately 3% of that security’s market price.

The Fund may implement short positions and may do so by using swaps, options or futures, TBA agreements in Agency Mortgage-Backed Securities, or through short sales of any instrument that the Fund may purchase for investment. For example, the Fund may enter into a futures contract pursuant to which it agrees to sell an asset (that it does not currently own) at a specified price at a specified point in the future. This gives the Fund a short position with respect to that asset. The Fund may utilize short positions to implement macro views on securities valuations, long term views on relative value or short term views on security mispricings, as well as any other views the Investment Adviser deems appropriate. For example, the Fund may enter into a TBA agreement to sell an Agency Mortgage-Backed Security that it believes will underperform. The Fund will benefit from a short position to the extent the asset decreases in value (and will be harmed to the extent the asset increases in value) between the time it enters into the futures contract and the agreed date of sale. Alternatively, the Fund may sell an instrument (e.g., a bond, or a futures contract) it does not own in anticipation of a decline in the market value of the instrument, and then borrow the instrument to make delivery to the buyer. In these transactions, the Fund is obligated to replace the instrument borrowed by purchasing it at the market price at the time of replacement.

The Fund’s portfolio managers seek to build a portfolio that reflects their investment views across the U.S. mortgages market consistent with the Fund’s overall risk budget and the views of the Investment Adviser’s Global Fixed Income top-down teams. As part of the Investment Adviser’s fundamental investment process, the Investment Adviser may integrate environmental, social and governance (“ESG”) factors alongside traditional fundamental factors. No one factor or consideration is determinative in the fundamental investment process.

The Investment Adviser measures the Fund’s performance against the Bloomberg U.S. Securitized Bond Index.

PRINCIPAL RISKS OF THE FUND

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation (“FDIC”) or any government agency. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective. Investments in the Fund involve substantial risks which prospective investors should consider carefully before investing. The Fund’s principal risks are presented below in alphabetical order, and not in the order of importance or potential exposure.

Collateralized Loan Obligations Risk. The Fund may invest in collateralized loan obligations (“CLOs”) and other similarly structured investments. A CLO is an asset-backed security whose underlying collateral is a pool of loans, which may include, among others, domestic and foreign floating rate and fixed rate senior secured loans, senior unsecured loans, and subordinate corporate loans,

including loans that may be rated below investment grade or equivalent unrated loans. In addition to the normal risks associated with loan- and credit-related securities discussed elsewhere in the Prospectus (e.g., loan-related investments risk, interest rate risk and default risk), investments in CLOs carry additional risks including, but not limited to, the risk that: (i) distributions from the collateral may not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the Fund may invest in tranches of CLOs that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; and (v) the CLO's manager may perform poorly.

CLOs issue classes or "tranches" that offer various maturity, risk and yield characteristics. Losses caused by defaults on underlying assets are borne first by the holders of subordinate tranches. Despite the protection from subordinate tranches, more senior tranches of CLOs can experience losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of more subordinate tranches, market anticipation of defaults, as well as aversion to CLO securities as a class. The Fund's investments in CLOs primarily consist of investment grade tranches.

Credit/Default Risk. An issuer or guarantor of fixed income securities held by the Fund may default on its obligation to pay interest and repay principal or default on any other obligation. Additionally, the credit quality of securities or instruments may deteriorate rapidly, which may impair the Fund's liquidity and cause significant net asset value ("NAV") deterioration. These risks are heightened in market environments where interest rates are rising.

Derivatives Risk. The Fund's use of interest rate futures, interest rate, swaps, credit default swaps and other derivative instruments may result in losses, including due to adverse market movements. These instruments, which may pose risks in addition to and greater than those associated with investing directly in securities, currencies or other assets and instruments, may increase market exposure and be illiquid or less liquid, volatile, difficult to price and leveraged so that small changes in the value of the underlying assets or instruments may produce disproportionate losses to the Fund. Certain derivatives are also subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligations. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with investments in more traditional securities and instruments.

Floating and Variable Rate Obligations Risk. For floating and variable rate obligations, there may be a lag between an actual change in the underlying interest rate benchmark and the reset time for an interest payment of such an obligation, which could harm or benefit the Fund, depending on the interest rate environment or other circumstances. In a rising interest rate environment, for example, a floating or variable rate obligation that does not reset immediately would prevent the Fund from taking full advantage of rising interest rates in a timely manner. However, in a declining interest rate environment, the Fund may benefit from a lag due to an obligation's interest rate payment not being immediately impacted by a decline in interest rates.

Certain floating and variable rate obligations have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the "reference rate"), such as the Secured Overnight Financing Rate ("SOFR"), a term SOFR rate published by CME Group Benchmark Administration Limited (CBA) calculated using certain derivatives markets ("Term SOFR") or another rate determined using SOFR values. Such a floor protects the Fund from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the obligation, and the Fund may not benefit from increasing interest rates for a significant amount of time.

Some floating or variable rate obligations or investments of the Fund may have previously referenced the London Interbank Offered Rate ("LIBOR"). As a result of benchmark reforms, publication of all LIBOR settings has ceased. Public and private sector actors have worked to establish alternative reference rates, like SOFR or Term SOFR, to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR which may affect the value, volatility, liquidity or return on certain of the Fund's floating and variable rate obligations and investments and result in costs incurred in connection with changing reference rates used for positions, closing out positions and entering into new trades. For example, LIBOR was previously calculated using the average rate at which a selection of large global banks reported they could borrow from one another and SOFR is a measure of the cost of borrowing cash overnight, collateralized by the U.S. Treasury securities, and is based on directly observable U.S. Treasury-backed repurchase transactions. Certain of the Fund's obligations or investments may have transitioned from LIBOR. The transition from LIBOR to alternative reference rates may result in operational issues for the Fund or its obligations or investments. Any pricing adjustments to the Fund's obligations or investments resulting from use of an alternative reference rate may also adversely affect the Fund's performance and/or NAV. No assurances can be given as to the impact of the LIBOR transition (and the timing of any such impact) on the Fund and its obligations and investments.

Interest Rate Risk. When interest rates increase, fixed income securities or instruments held by the Fund will generally decline in value. Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. Changing interest rates may have unpredictable effects on the markets, may result in heightened market volatility and may detract from Fund performance. In addition, changes in monetary policy may exacerbate the risks associated with changing interest rates. Funds with longer average portfolio durations will generally be more sensitive to changes in interest rates than funds with a shorter average portfolio duration. Fluctuations in interest rates may also affect the liquidity of fixed income securities and instruments held by the Fund.

Large Shareholder Transactions Risk. The Fund may experience adverse effects when certain large shareholders purchase or redeem large amounts of shares of the Fund. Such large shareholder redemptions, which may occur rapidly or unexpectedly, may cause the Fund to sell portfolio securities at times when it would not otherwise do so, which may negatively impact the Fund's NAV and liquidity. Similarly, large Fund share purchases may adversely affect the Fund's performance to the extent that the Fund is delayed in investing new cash or otherwise maintains a larger cash position than it ordinarily would. These transactions may also accelerate the realization of taxable income to shareholders if such sales of investments resulted in gains, and may also increase transaction costs. In addition, a large redemption could result in the Fund's current expenses being allocated over a smaller asset base, leading to an increase in the Fund's expense ratio.

Market Risk. The value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular sectors, governments or countries and/or general economic conditions throughout the world due to increasingly interconnected global economies and financial markets. Events such as war, military conflict, geopolitical disputes, acts of terrorism, social or political unrest, natural disasters, recessions, inflation, rapid interest rate changes, supply chain disruptions, tariffs and other restrictions on trade, sanctions or the spread of infectious illness or other public health threats, or the threat or potential of one or more such events and developments, could also significantly impact the Fund and its investments.

Mortgage-Backed and Other Asset-Backed Securities Risk. Mortgage-related and other asset-backed securities are subject to credit/default, interest rate and certain additional risks, including "extension risk" (i.e., in periods of rising interest rates, issuers may pay principal later than expected) and "prepayment risk" (i.e., in periods of declining interest rates, issuers may pay principal more quickly than expected, causing the Fund to reinvest proceeds at lower prevailing interest rates). Due to these risks, asset-backed securities may become more volatile in certain interest rate environments. Mortgage-Backed Securities offered by non-governmental issuers are subject to other risks as well, including failures of private insurers to meet their obligations and unexpectedly high rates of default on the mortgages backing the securities, particularly during periods of rising interest rates. Other asset-backed securities are subject to risks similar to those associated with Mortgage-Backed Securities, as well as risks associated with the nature and servicing of the assets backing the securities. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk.

The Fund may gain exposure to Agency Mortgage-Backed Securities by utilizing TBA agreements. TBA agreements involve the risk that the other party to the transaction will not meet its obligation. If this occurs, the Fund could lose the opportunity to obtain a price or yield that it considers advantageous. In such circumstances, the Fund may not be able to secure an alternative investment with comparable terms. TBA agreements may give rise to a form of leverage. The Fund's use of TBA agreements may also result in a higher portfolio turnover rate and/or increased capital gains for the Fund.

Portfolio Turnover Rate Risk. A high rate of portfolio turnover involves correspondingly greater expenses which must be borne by the Fund and its shareholders, and is also likely to result in short-term capital gains taxable to shareholders.

Short Position Risk. The Fund may enter into a short position through a futures contract, an option or swap agreement or through short sales of any instrument that the Fund may purchase for investment. Taking short positions involves leverage of the Fund's assets and presents various risks. If the value of the underlying instrument or market in which the Fund has taken a short position increases, then the Fund will incur a loss equal to the increase in value from the time that the short position was entered into plus any related interest payments or other fees. Taking short positions involves the risk that losses may be disproportionate, may exceed the amount invested and may be unlimited.

U.S. Government Securities Risk. The U.S. government may not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. U.S. government securities issued by those agencies, instrumentalities and government sponsored enterprises, including those issued by the Federal National Mortgage Association ("Fannie Mae"), Federal Home Loan Mortgage Corporation ("Freddie Mac") and the Federal Home Loan Banks, are neither issued nor guaranteed by the U.S. Treasury and, therefore, are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. government securities held by the Fund may greatly exceed their current resources, including any legal right to support from the U.S. Treasury. It is possible that issuers of U.S. government securities will not have the funds to meet their payment obligations in the future.

PERFORMANCE

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) changes in the performance of the Fund's Investor Shares from year to year; and (b) how the average annual total returns of the Fund's Investor Shares compare to those of a regulatorily required broad-based securities market index (Bloomberg U.S. Aggregate Bond Index) (the "Regulatory Benchmark") and the Bloomberg U.S. Securitized Bond Index (the "Performance Benchmark"). The Performance Benchmark is generally more representative of the market sectors and/or types of investments in which the Fund invests or to which the Fund has exposure and which the Investment Adviser uses to measure the Fund's performance. The Fund has included in the table below the performance of the Regulatory Benchmark, which represents a broader measure of market performance, to comply with new regulatory requirements. For additional information about these benchmark indices, please see "Additional Performance and Benchmark Information" on page 8 of the Prospectus. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available at no cost at am.gs.com or by calling the appropriate phone number on the back cover of the Prospectus.

CALENDAR YEAR (Investor)*

During the periods shown in the chart above:	Returns	Quarter ended
Best Quarter Return	7.28%	December 31, 2023
Worst Quarter Return	-5.54%	September 30, 2022

AVERAGE ANNUAL TOTAL RETURN

For the period ended December 31, 2025	1 Year	5 Years	10 Years	Inception Date
Investor Shares				7/29/2011
Returns Before Taxes	8.21%	-0.17%	1.50%	
Returns After Taxes on Distributions	6.47%	-1.43%	0.28%	
Returns After Taxes on Distributions and Sale of Fund Shares	4.83%	-0.68%	0.61%	
Bloomberg U.S. Securitized Bond Index	8.49%	0.22%	1.68%	
Bloomberg U.S. Aggregate Bond Index	7.30%	-0.36%	2.01%	

Benchmark returns do not reflect any deductions for fees or expenses.

* Because Service Class and Class R Shares have not had returns for a full calendar year as of the date of this Prospectus, the figures shown above provide performance for Investor Shares of the Fund (which are not offered in this Prospectus). Service and Class R Shares would have substantially similar annual returns because the shares are invested in the same portfolio of securities and the annual returns would differ only to the extent that the share classes do not have the same expenses. Service and Class R Shares are expected to have lower annual returns than Investor Shares because the expenses of Service and Class R Shares are expected to be higher than the expenses of Investor Shares.

PORTFOLIO MANAGEMENT

Goldman Sachs Asset Management, L.P. is the investment adviser for the Fund (the “Investment Adviser” or “GSAM”).

Portfolio Managers: Rob Pyne, Managing Director, has managed the Fund since 2022 and Peter Stone, Managing Director, has managed the Fund since July 2025.

BUYING AND SELLING FUND SHARES

There is no minimum for initial purchases of Class R Shares. The Fund does not impose minimum purchase requirements for initial or subsequent investments in Service Shares, although an Intermediary (as defined below) may impose such minimums and/or establish other requirements such as a minimum account balance.

You may purchase and redeem (sell) shares of the Fund on any business day through certain intermediaries that have a relationship with Goldman Sachs & Co. LLC (“Goldman Sachs”), including banks, trust companies, brokers, registered investment advisers and other financial institutions (“Intermediaries”).

TAX INFORMATION

The Fund’s distributions are taxable, and will be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account. Investments made through tax-deferred arrangements may become taxable upon withdrawal from such arrangements.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of a Fund through an Intermediary, the Fund and/or its related companies may pay the Intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your Intermediary’s website for more information.

Investment Management Approach

INVESTMENT OBJECTIVE

The Fund seeks a high level of total return consisting of income and capital appreciation. The Fund's investment objective may be changed without shareholder approval upon 60 days' notice.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests, under normal circumstances, at least 80% of its Net Assets in Mortgage-Backed Securities of U.S. issuers, including Agency Mortgage-Backed Securities. The Fund generally expects to invest at least 90% of its Net Assets in Agency Mortgage-Backed Securities in addition to other U.S. Government Securities. Shareholders will be provided with sixty days notice in the manner prescribed by the SEC before any change in the Fund's policy to invest at least 80% of its Net Assets in the particular type of investment suggested by its name. The Fund may also invest in mortgage dollar rolls, asset-backed securities (including CLOs) and foreign securities. The Fund also intends to invest in derivatives, including (but not limited to) interest rate futures, interest rate swaps and credit default swaps, primarily to manage the Fund's duration, hedge the Fund's portfolio risks, and/or gain exposure to certain fixed income securities. For example, where the Fund invests in an obligation that has a duration outside the Fund's target duration range (as discussed further below), the Fund may invest in derivatives as a way to mitigate the impact of that obligation on the overall duration of the Fund's portfolio.

The Fund may gain exposure to Agency Mortgage-Backed Securities through several methods, including by utilizing TBA agreements in Agency Mortgage-Backed Securities or through the use of reverse repurchase agreements. TBA agreements for Agency Mortgage-Backed Securities are standardized contracts for future delivery of fixed-rate mortgage pass-through securities in which the exact mortgage pools to be delivered are not specified until shortly before settlement. In TBA agreements for Agency Mortgage-Backed Securities, the buyer and seller agree upon general trade parameters such as the issuer, maturity, coupon, face value, price and settlement date. The actual pools of mortgages to be delivered typically are announced two days prior to the settlement date; however, in most instances, the Fund will not take delivery of the pools of mortgages, but will instead participate in rolling TBA agreements, in which it exchanges a near settlement TBA agreement for a TBA agreement with a later settlement date. Reverse repurchase agreements involve the sale of securities held by the Fund subject to an agreement to repurchase them at a mutually agreed upon date and price (including interest). These transactions enable the Fund to gain exposure to specified pools of Agency Mortgage-Backed Securities by purchasing them on a forward settling basis and using the proceeds of the reverse repurchase agreement to settle the trade. The Fund may enter into reverse repurchase agreements when the Investment Adviser expects that the return to be earned from the investment of the transaction proceeds to be greater than the interest expense of the transaction. Reverse repurchase agreements may also be entered into as a temporary measure for emergency purposes or to meet redemption requests.

The Fund may also seek to obtain exposure to fixed income investments through investments in affiliated or unaffiliated investment companies, including ETFs.

The Fund's investments must be rated, at the time of purchase, at least BBB- by S&P, at least Baa3 by Moody's, or have a comparable credit rating by another NRSRO or, if unrated, must be determined by the Investment Adviser to be of comparable credit quality. The Fund's target duration range under normal interest rate conditions is expected to approximate that of the Bloomberg U.S. Securitized Bond Index plus or minus 0.5 years, over the last five years ended June 30, 2025, the duration of this Index has ranged between 2.28 and 6.59 years. "Duration" is a measure of a debt security's price sensitivity to changes in interest rates. The longer the duration of a Fund (or an individual debt security), the more sensitive its market price to changes in interest rates. For example, if market interest rates increase by 1%, the market price of a debt security with a positive duration of 3 years will generally decrease by approximately 3%. Conversely, a 1% decline in market interest rates will generally result in an increase of approximately 3% of that security's market price.

A U.S. issuer is an issuer economically tied to the United States. In determining whether an issuer is economically tied to a particular country, including the United States, the Investment Adviser will consider whether the issuer:

- Has a class of securities whose principal securities market is in that country;
- Has its principal office in that country;
- Derives 50% or more of its total revenue or profit from goods produced, sales made or services provided in that country;
- Maintains 50% or more of its assets in that country; or
- Is otherwise determined to be economically tied to that country by the Investment Adviser in its discretion. For example, the Investment Adviser may use the classifications assigned by third parties, including an issuer's "country of risk" as determined by Bloomberg or the classifications assigned to an issuer by the Fund's benchmark index provider. These classifications are generally

based on a number of criteria, including an issuer's country of domicile, the primary stock exchange on which an issuer's securities trade, the location from which the majority of an issuer's revenue is derived, and an issuer's reporting currency. Although the Investment Adviser may rely on these classifications, it is not required to do so.

The Fund may implement short positions and may do so by using swaps, options or futures, TBA agreements in Agency Mortgage-Backed Securities, or through short sales of any instrument that the Fund may purchase for investment. For example, the Fund may enter into a futures contract pursuant to which it agrees to sell an asset (that it does not currently own) at a specified price at a specified point in the future. This gives the Fund a short position with respect to that asset. The Fund may utilize short positions to implement macro views on securities valuations, long term views on relative value or short term views on security mispricings, as well as any other views the Investment Adviser deems appropriate. For example, the Fund may enter into a TBA agreement to sell an Agency TBA Mortgage-Backed Security that it believes will underperform. The Fund will benefit from a short position to the extent the asset decreases in value (and will be harmed to the extent the asset increases in value) between the time it enters into the futures contract and the agreed date of sale. Alternatively, the Fund may sell an instrument (e.g., a bond, or a futures contract) it does not own in anticipation of a decline in the market value of the instrument, and then borrow the instrument to make delivery to the buyer. In these transactions, the Fund is obligated to replace the instrument borrowed by purchasing it at the market price at the time of replacement.

The Fund's portfolio managers seek to build a portfolio that reflects their investment views across the U.S. mortgages market consistent with the Fund's overall risk budget and the views of the Investment Adviser's Global Fixed Income top-down teams. The Investment Adviser measures the Fund's performance against the Bloomberg U.S. Securitized Bond Index. The Fund's broad-based securities market index is the Bloomberg U.S. Aggregate Bond Index. The Bloomberg U.S. Securitized Bond Index is a composite of asset-backed securities, collateralized mortgage-backed securities (ERISA-eligible) and fixed rate mortgage-backed securities. The Bloomberg U.S. Aggregate Bond Index represents an unmanaged diversified portfolio of investment grade, U.S. dollar-denominated, fixed income securities, including U.S. Treasuries, government-related and corporate securities, mortgage-backed securities (agency fixed-rate pass-throughs), asset-backed securities and commercial mortgage-backed securities (agency and non-agency).

The Fund may, from time to time, take temporary defensive positions that are inconsistent with the Fund's principal investment strategies in attempting to respond to adverse market, political or other conditions. For temporary defensive purposes (and to the extent that it is permitted to invest in the following), the Fund may invest up to 100% of its total assets in U.S. Government Securities, commercial paper rated at least A-2 by S&P, P-2 by Moody's Investors Service, Inc. ("Moody's"), or having a comparable credit rating by another NRSRO (or if unrated, determined by the Investment Adviser to be of comparable credit quality), certificates of deposit, bankers' acceptances, repurchase agreements, non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year, certain ETFs and other investment companies and cash items. **When the Fund's assets are invested in such instruments, the Fund may not be achieving its investment objective.**

Fixed Income Investment Philosophy:

Our process:

- *Combines diversified sources of return by employing multiple strategies*
- *Takes a global perspective to seek relative value opportunities*
- *Employs focused specialist teams to seek to identify short-term mis-pricings and incorporate long-term views*
- *Emphasizes a risk-aware approach as we view risk management as both an offensive and defensive tool*

The Fixed Income Portfolio Management Team implements this overall philosophy through an investment process that seeks to maximize risk adjusted total returns by utilizing a diverse set of investment strategies and revolves around four key elements:

1. Developing a long-term risk budget—Lead portfolio managers (the "Portfolio Team") set the strategic direction of a Fund by establishing a "risk budget." The "risk budget" for the Funds is the range the portfolio managers will allow the Funds to deviate from their respective benchmarks with respect to sector allocations, country allocations, securities selection and, to a lesser extent, duration. Following analysis of risk and return objectives, they allocate the overall risk budget to each component strategy to seek to optimize potential return.

2. Fundamental investment process—The Fixed Income Portfolio Management Team employs a fundamental investment process that considers a wide range of factors, and no one factor or consideration is determinative. Traditional fundamental factors that the Fixed Income Portfolio Management Team may consider include, but are not limited to, leverage, earnings, enterprise value, industry trends and macroeconomic factors. As part of its fundamental investment process, the Fixed Income Portfolio Management Team may integrate environmental, social and governance ("ESG") factors alongside traditional fundamental factors to seek to: (i) determine whether a particular fixed income security and/or sector is suitable and attractively priced for investment and (ii) assess their potential impact on the credit quality and spreads of a particular fixed income security. ESG factors that the Fixed Income Portfolio Management Team may consider include, but are not limited to, physical risk (e.g., wildfires, floods, droughts and rising sea levels), carbon intensity and emissions profiles, governance practices and board structure. The identification of a risk related to an ESG factor

will not necessarily exclude a particular fixed income security and/or sector that, in the Fixed Income Portfolio Management Team's view, is otherwise suitable and attractively priced for investment, and the Fixed Income Portfolio Management Team may invest in a security or sector without integrating ESG factors or considerations into its fundamental investment process. The relevance of specific traditional fundamental factors and ESG factors to the fundamental investment process varies across asset classes, sectors and strategies. The Fixed Income Portfolio Management Team may utilize data sources provided by third-party vendors and/or engage directly with issuers when assessing the above factors.

3. Generating investment views and strategies—Our Top-down and Bottom-up Strategy Teams (collectively, “Strategy Teams”) generate investment ideas within their areas of specialization. The Top-down Strategy Teams are responsible for Cross-Sector, Duration, Country, and Currency decisions. Concurrently, Bottom-up Strategy Teams, comprised of sector specialists, formulate sub-sector allocation and security selection decisions.

4. Constructing the portfolios—The Portfolio and Strategy Teams construct each Fund's portfolio through a collaborative process in which the Portfolio Team oversees the overall portfolio while the Strategy Teams actively manage the securities and strategies within their areas of specialization. This process enables the Portfolio Team to build a portfolio consisting of the ideas of the individual Strategy Teams, consistent with a Fund's overall risk and return objectives.

With every fixed income portfolio, the Investment Adviser applies a team approach that emphasizes risk management and capitalizes on GSAM's extensive research capabilities.

ADDITIONAL FEES AND EXPENSES INFORMATION

Differences in the “Expense Limitation” ratios across the Fund's share classes are the result of, among other things, the effect of mathematical rounding on the daily accrual of expense reimbursement, particularly, in respect to share classes with small amounts of assets.

Differences in the “Other Expenses” ratios across the Fund's share classes are the result of, among other things, contractual differences in transfer agency fees and/or the effect of mathematical rounding on the daily accrual of certain expenses, particularly, in respect to share classes with small amounts of assets.

ADDITIONAL PERFORMANCE AND BENCHMARK INFORMATION

The below is additional information that relates to the “Performance” section of the Fund's Summary section.

Note that the “Best Quarter” and “Worst Quarter” figures shown in the “Performance” section of the Fund's Summary section are applicable only to the time period covered by the bar chart.

The definitions below apply to the after-tax returns shown in the “Performance” section of the Fund's Summary section.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on the Fund's Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on the Fund's Shares (i.e., dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Fund Shares. These returns reflect taxes paid on distributions on the Fund's Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Fund Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

Note on Benchmarks. References in the Prospectus to the Fund's Regulatory or Performance Benchmark (or any other benchmark) are for informational purposes only, and unless otherwise noted, are not an indication of how the Fund is managed or the Fund's risk characteristics.

OTHER INVESTMENT PRACTICES AND SECURITIES

Although the Fund's principal investment strategy is described in the Fund's Summary—Principal Strategy section of the Prospectus, the following tables identify some of the investment techniques that may (but are not required to) be used by the Fund in seeking to achieve its investment objective. Numbers in these tables show allowable usage only; for actual usage, consult the Fund's most recently filed Form N-CSR. For more information about these and other investment practices and securities, see Appendix A.

The Fund publishes on its website (am.gs.com) complete portfolio holdings for the Fund as of the end of each fiscal quarter subject to a thirty day lag between the date of the information and the date on which the information is disclosed. In addition, the Fund publishes on its website selected portfolio holdings information as of the end of each month subject to a fifteen day lag between the date of the information and the date on which the information is disclosed. In addition, a description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio holdings is available in the Fund's SAI.

The Fund currently intends to invest not more than 5% of its total assets in foreign securities (including securities not denominated in U.S. dollars), and will seek to hedge such investments against currency risk.*

² *Structured securities are not subject to the same minimum credit quality requirement as the Fund's investments in fixed income securities.*

³ *The Fund may not purchase securities that are rated below BBB- or Baa3 but may own such a security, if the security is downgraded after purchase.*

Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any other governmental agency. The principal risks of the Fund are discussed in the Summary section of the Prospectus. The following section provides additional information on the risks that apply to the Fund, which may result in a loss of your investment. The risks applicable to the Fund are presented below in alphabetical order, and not in the order of importance or potential exposure. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective.

- **Call/Prepayment Risk**—An issuer could exercise its right to pay principal on an obligation held by the Fund (such as a mortgage-backed security) earlier than expected. This may happen when there is a decline in interest rates, when credit spreads change, or when an issuer’s credit quality improves. Under these circumstances, the Fund may be unable to recoup all of its initial investment and will also suffer from having to reinvest in lower-yielding securities.
- **Collateralized Loan Obligations and Other Collateralized Debt Obligations Risk**—The Funds may invest in collateralized loan obligations (“CLOs”) and other similarly structured investments. A CLO is an asset-backed security whose underlying collateral is a pool of loans, which may include, among others, domestic and foreign floating rate and fixed rate senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. In addition to the normal risks associated with loan- and credit-related securities discussed elsewhere in the Prospectus (e.g., interest rate risk and default risk), investments in CLOs carry additional risks including, but not limited to, the risk that: (i) distributions from the collateral may not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the Fund may invest in tranches of CLOs that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; and (v) the CLO’s manager may perform poorly. CLOs may charge management and other administrative fees, which are in addition to those of the Fund.

CLOs issue classes or “tranches” that offer various maturity, risk and yield characteristics. Losses caused by defaults on underlying assets are borne first by the holders of subordinate tranches. Tranches are categorized as senior, mezzanine and subordinated/equity, according to their degree of risk. If there are defaults or the CLO’s collateral otherwise underperforms, scheduled payments to senior tranches take precedence over those of mezzanine tranches, and scheduled payments to mezzanine tranches take

precedence over those of subordinated/equity tranches. The riskiest portion is the “equity” tranche which bears the bulk of defaults from the collateral and serves to protect the other, more senior tranches from default in all but the most severe circumstances. Because it is partially protected from defaults, a senior tranche from a CLO trust typically has higher ratings and lower yields than its underlying collateral and may be rated investment grade. Despite the protection from the equity and mezzanine tranches, more senior tranches of CLOs can experience losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of more subordinate tranches, market anticipation of defaults, as well as aversion to CLO securities as a class. The Fund’s investments in CLOs primarily consist of investment grade tranches.

Typically, CLOs are privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in CLOs may be characterized by the Fund as illiquid investments and may have limited independent pricing transparency. However, an active dealer market may exist for CLOs that qualify under the Rule 144A “safe harbor” from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers, and such CLOs may be characterized by the Fund as liquid investments.

The Fund may also invest in collateralized debt obligations (“CDOs”), which are structured similarly to CLOs, but are backed by pools of assets that are debt securities (rather than being limited only to loans), typically including bonds, other structured finance securities (including other asset-backed securities and other CDOs) and/or synthetic instruments. Like CLOs, the risks of an investment in a CDO depend largely on the type and quality of the collateral securities and the tranche of the CDO in which the Fund invests. CDOs collateralized by pools of asset-backed securities carry the same risks as investments in asset-backed securities directly, including losses with respect to the collateral underlying those asset-backed securities. In addition, certain CDOs may not hold their underlying collateral directly, but rather, use derivatives such as swaps to create “synthetic” exposure to the collateral pool. Such CDOs entail the risks associated with derivative instruments.

- **Counterparty Risk**—Many of the protections afforded to cleared transactions, such as the security afforded by transacting through a clearing house, might not be available in connection with certain OTC transactions. Therefore, in those instances in which the Fund enters into certain OTC transactions, the Fund will be subject to the risk that its direct counterparty will not perform its obligations under the transactions and that the Fund will sustain losses. However, recent regulatory developments require margin on certain uncleared OTC transactions which may reduce, but not eliminate, this risk.
- **Credit/Default Risk**—An issuer or guarantor of fixed income securities or instruments held by the Fund (which, for certain Funds, may have low credit ratings) may default on its obligation to pay interest and repay principal or default on any other obligation. The credit quality of a Fund’s portfolio securities or instruments may meet the Fund’s credit quality requirements at the time of purchase but then deteriorate thereafter, and such a deterioration can occur rapidly. In certain instances, the downgrading or default of a single holding or guarantor of the Fund’s holding may impair the Fund’s liquidity and have the potential to cause significant deterioration in NAV. These risks are heightened in market environments where interest rates are rising as well as in connection with a Fund’s investments in non-investment grade fixed income securities.
- **Cybersecurity Risk**—The Fund may be susceptible to operational and information security risks resulting from cyber-attacks. Cyber-attacks include, among others, stealing or corrupting confidential information and other data that is maintained online or digitally for financial gain, denial-of-service attacks on websites causing operational disruption, and the unauthorized release of confidential information and other data. Cyber-attacks have the ability to cause significant disruptions and impact business operations; to result in financial losses; to prevent shareholders from transacting business; to interfere with the Fund’s calculation of NAV; and to lead to violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs and/or additional compliance costs. Cyber-attacks affecting the Fund or its Investment Adviser, custodian, Transfer Agent, or other third-party service providers may adversely impact the Fund and its shareholders.
- **Derivatives Risk**—The Fund’s use of options, futures, forwards, swaps, options on swaps, structured securities and other derivatives and similar instruments (collectively referred to in this paragraph as “derivatives”) may result in losses, including due to adverse market movements. Derivatives, which may pose risks in addition to and greater than those associated with investing directly in securities, currencies or other instruments, may increase market exposure and be illiquid or less liquid, volatile, difficult to price and leveraged so that small changes in the value of the underlying assets or instruments may produce disproportionate losses to the Fund. Certain derivatives are also subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill, or lacks the capacity or authority to fulfill, its contractual obligations, liquidity risk, which includes the risk that the Fund will not be able to close its derivatives position when it is advantageous to do so, and risks arising from margin requirements, which include the risk that the Fund will be required to pay additional margin or set aside additional collateral to maintain open derivative positions. Derivatives may be used for both hedging and non-hedging purposes.

The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with investments in more traditional securities and instruments, and there is no guarantee that the use of derivatives will achieve their intended result. If the Investment Adviser is incorrect in its expectation of the timing or level of fluctuation in securities prices, interest rates, currency prices or other variables, the use of derivatives could result in losses, which in some cases may be

significant. A lack of correlation between changes in the value of derivatives and the value of the portfolio assets (if any) being hedged could also result in losses. In addition, there is a risk that the performance of the derivatives or other instruments used by the Investment Adviser to replicate the performance of a particular asset class may not accurately track the performance of that asset class.

The use of derivatives is also subject to operational and legal risks. Operational risks generally refer to risks related to potential operational issues, including documentation issues, settlement issues, system failures, inadequate controls, and human error. Legal risks generally refer to risks of loss resulting from insufficient documentation or legality or enforceability of a contract.

- **ESG Integration Risk**—The Investment Adviser employs a fundamental investment process that may integrate ESG factors with traditional fundamental factors. The relevance and weightings of specific ESG factors to or within the fundamental investment process varies across asset classes, sectors and strategies and no one factor or consideration is determinative. When integrating ESG factors into the investment process, the Investment Adviser may rely on third-party data that it believes to be reliable, but it does not guarantee the accuracy of such third-party data. ESG information from third-party data providers may be incomplete, inaccurate or unavailable, which may adversely impact the investment process. Moreover, ESG information, whether from an external and/or internal source, is, by nature and in many instances, based on a qualitative and subjective assessment. An element of subjectivity and discretion is therefore inherent to the interpretation and use of ESG data. The process for conducting ESG assessments and implementation of ESG views in client/fund portfolios, including the format and content of such analysis and the tools and/or data used to perform such analysis, may also vary among the Investment Adviser’s portfolio management teams. While the Investment Adviser believes that the integration of material ESG factors into the Fund’s investment process has the potential to identify financial risks and contribute to the Fund’s long-term performance, ESG factors may not be considered for each and every investment decision, and there is no guarantee that the integration of ESG factors will result in better performance. Investors can differ in their views of what constitutes positive or negative ESG characteristics. Moreover, the current lack of common standards may result in different approaches to integrating ESG factors. As a result, the Fund may invest in companies that do not reflect the beliefs and values of any particular investor. The Investment Adviser’s approach to ESG integration may evolve and develop over time, both due to a refinement of investment decision-making processes to address ESG factors and risks, and because of legal and regulatory developments.
- **Extension Risk**—An issuer could exercise its right to pay principal on an obligation held by the Fund (such as a mortgage-backed security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.
- **Floating and Variable Rate Obligations Risk**—Floating rate and variable rate obligations are debt instruments issued by companies or other entities with interest rates that reset periodically (typically, daily, monthly, quarterly, or semi-annually) in response to changes in the market rate of interest on which the interest rate is based. For floating and variable rate obligations, there may be a lag between an actual change in the underlying interest rate benchmark and the reset time for an interest payment of such an obligation, which could harm or benefit the Fund, depending on the interest rate environment or other circumstances. In a rising interest rate environment, for example, a floating or variable rate obligation that does not reset immediately would prevent the Fund from taking full advantage of rising interest rates in a timely manner. However, in a declining interest rate environment, the Fund may benefit from a lag due to an obligation’s interest rate payment not being immediately impacted by a decline in interest rates.

Certain floating and variable rate obligations have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the “reference rate”), such as Secured Overnight Financing Rate (“SOFR”), Term SOFR or another rate determined using SOFR. Such a floor protects the Fund from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the obligation, and the Fund may not benefit from increasing interest rates for a significant amount of time.

Some floating or variable rate obligations or investments of the Fund may have previously referenced LIBOR. As a result of benchmark reforms, publication of all LIBOR settings has ceased. Public and private sector actors have worked to establish alternative reference rates, like SOFR or Term SOFR, to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR which may affect the value, volatility, liquidity or return on certain of the Fund’s floating and variable rate obligations and investments and result in costs incurred in connection with changing reference rates used for positions, closing out positions and entering into new trades. For example, LIBOR was previously calculated using the average rate at which a selection of large global banks reported they could borrow from one another and SOFR is a measure of the cost of borrowing cash overnight, collateralized by the U.S. Treasury securities, and is based on directly observable U.S. Treasury-backed repurchase transactions. Certain of the Fund’s obligations or investments may have transitioned from LIBOR. The transition from LIBOR to

alternative reference rates may result in operational issues for the Fund or its obligations or investments. Any pricing adjustments to the Fund's obligations or investments resulting from use of an alternative reference rate may also adversely affect the Fund's performance and/or NAV. No assurances can be given as to the impact of the LIBOR transition (and the timing of any such impact) on the Fund and its obligations and investments.

■ **Foreign Risk**—When the Fund invest in foreign securities, they may be subject to risks of loss not typically associated with U.S. issuers. Loss may result because of more or less foreign government regulation; less public information; less stringent investor protections; less stringent accounting, corporate governance, financial reporting and disclosure standards; less liquid, developed or efficient trading markets, greater volatility and less economic, political and social stability in the countries in which the Fund invests. Loss may also result from, among other things, deteriorating economic and business conditions in other countries, including the United States, regional and global conflicts, the imposition of sanctions, exchange controls (including repatriation restrictions), foreign taxes, confiscation of assets and property, trade restrictions (including tariffs), expropriation and other government restrictions by the United States and other governments, higher transaction costs, difficulty enforcing contractual obligations or from problems in share registration, settlement or custody. The type and severity of sanctions and other similar measures, including counter sanctions and other retaliatory actions, that may be imposed could vary broadly in scope, and their impact is impossible to predict. These types of measures may include, but are not limited to, banning a sanctioned country from global payment systems that facilitate cross-border payments, restricting the settlement of securities transactions by certain investors, and freezing the assets of particular countries, entities, or persons. The imposition of sanctions and other similar measures could, among other things, cause a decline in the value and/or liquidity of securities issued by the sanctioned country or companies located in or economically tied to the sanctioned country, downgrades in the credit ratings of the sanctioned country or companies located in or economically tied to the sanctioned country, devaluation of the sanctioned country's currency, and increased market volatility and disruption in the sanctioned country and throughout the world. Sanctions and other similar measures could limit or prevent the Fund from buying and selling securities (in the sanctioned country and other markets), significantly delay or prevent the settlement of securities transactions, and significantly impact the Fund's liquidity and performance. The Fund or the Investment Adviser may determine not to invest in, or may limit its overall investment in, a particular issuer, country or geographic region due to, among other things, heightened risks regarding sanctions, repatriation restrictions, confiscation of assets and property, expropriation or nationalization. The Fund will also be subject to the risk of negative foreign currency rate fluctuations which may cause the value of securities denominated in such foreign currency (or other instruments through which the Fund has exposure to foreign currencies) to decline in value. Currency exchange rates may fluctuate significantly over short periods of time. Foreign risks will normally be greatest when the Fund invests in securities of issuers located in emerging countries. For more information about these risks, see Appendix A.

■ **Interest Rate Risk**—When interest rates increase, fixed income securities or instruments held by the Fund (which may include inflation protected securities) will generally decline in value. Long-term fixed income securities or instruments will normally have more price volatility because of this risk than short-term fixed income securities or instruments. A wide variety of market factors can cause interest rates to rise, including central bank monetary policy, rising inflation and changes in general economic conditions. Changing interest rates may have unpredictable effects on the markets, may result in heightened market volatility and may detract from Fund performance to the extent the Fund is exposed to such interest rates and/or volatility. In addition, changes in monetary policy may exacerbate the risks associated with changing interest rates. Funds with longer average portfolio durations will generally be more sensitive to changes in interest rates than funds with a shorter average portfolio duration. Fluctuations in interest rates may also affect the liquidity of fixed income securities and instruments held by the Fund.

It is difficult to predict the magnitude, timing or direction of interest rate changes and the impact these changes will have on the markets in which the Fund invests.

■ **Large Shareholder Transactions Risk**—The Fund may experience adverse effects when certain large shareholders, such as other funds, institutional investors (including those trading by use of non-discretionary mathematical formulas), financial intermediaries (who may make investment decisions on behalf of underlying clients and/or include the Fund in their investment model), individuals, accounts and Goldman Sachs affiliates, purchase or redeem large amounts of shares of the Fund. Such large shareholder redemptions, which may occur rapidly or unexpectedly, may cause the Fund to sell portfolio securities at times when it would not otherwise do so, which may negatively impact the Fund's NAV and liquidity. Similarly, large Fund share purchases may adversely affect the Fund's performance to the extent that the Fund is delayed in investing new cash or otherwise maintains a larger cash position than it ordinarily would. These transactions may also accelerate the realization of taxable income to shareholders if such sales of investments resulted in gains, and may also increase transaction costs. In addition, a large redemption could result in the Fund's current expenses being allocated over a smaller asset base, leading to an increase in the Fund's expense ratio.

■ **Leverage Risk**—Leverage creates exposure to potential gains and losses in excess of the initial amount invested. Borrowing and the use of derivatives may result in leverage and may increase market exposure and make the Fund more volatile. When the Fund uses leverage, the sum of the Fund's investment exposures may significantly exceed the amount of assets invested in the Fund, although these exposures may vary over time. Relatively small market movements may result in large changes in the value of a leveraged

investment. The use of leverage may cause the Fund to liquidate portfolio positions to satisfy its obligations or to meet margin/collateral requirements when it may not be advantageous to do so. The use of leverage by the Fund can substantially increase the Fund's investment risks and cause losses to be realized more quickly.

- **Liquidity Risk**—The Fund may invest in securities or instruments that trade in lower volumes, that are less liquid than other investments and/or that may become illiquid or less liquid in response to market developments or adverse investor perceptions. Investments that are illiquid or that trade in lower volumes may be more difficult to value. The Fund's transactions in securities that trade in lower volumes may be executed over a period of time, which could impact the prices at which the Fund transacts. When there is no willing buyer and investments cannot be readily sold at the desired time or price, the Fund may have to accept a lower price or may not be able to sell the security or instrument at all. An inability to sell one or more portfolio positions can adversely affect the Fund's value or prevent the Fund from being able to take advantage of other investment opportunities.

Illiquidity can be caused by a drop in overall market trading volume, an inability to find a willing buyer, or legal restrictions on the securities' resale. To the extent that the traditional dealer counterparties that engage in fixed income trading do not maintain inventories of bonds (which provide an important indication of their ability to "make markets") that keep pace with the growth of the bond markets over time, relatively low levels of dealer inventories could lead to decreased liquidity and increased volatility in the fixed income markets. Additionally, market participants other than the Fund may attempt to sell fixed income holdings at the same time as the Fund, which could cause downward pricing pressure and contribute to decreased liquidity.

Because certain Funds may invest in non-investment grade fixed income securities and emerging country issuers, these Funds may be especially subject to the risk that during certain periods, the liquidity of particular issuers or industries, or all securities within a particular investment category, may shrink or disappear suddenly and without warning as a result of adverse economic, market or political events (including periods of rapid interest rate changes), or adverse investor perceptions, whether or not accurate.

Liquidity risk may also refer to the risk that the Fund will not be able to pay redemption proceeds within the allowable time period stated in the Prospectus or without significant dilution to remaining investors' interests because of unusual market conditions, declining prices of the securities sold, an unusually high volume of redemption requests or other reasons. While the Fund reserves the right to meet redemption requests through in-kind distributions, the Fund may instead choose to raise cash to meet redemption requests through sales of portfolio securities or permissible borrowings. If the Fund is forced to sell investments at an unfavorable time and/or under unfavorable conditions, such sales may adversely affect the Fund's NAV and dilute remaining investors' interests.

Certain shareholders, including clients or affiliates of the Investment Adviser and/or other funds managed by the Investment Adviser, may from time to time own or control a significant percentage of the Fund's shares. Redemptions by these shareholders of their shares of the Fund may further increase the Fund's liquidity risk and may impact the Fund's NAV. These shareholders may include, for example, institutional investors, funds of funds, discretionary advisory clients and other shareholders, whose buy-sell decisions are controlled by a single decision-maker.

- **Management Risk**—A strategy used by the Investment Adviser may fail to produce the intended results.
- **Market Risk**—The value of the securities in which the Fund invests may go up or down in response to the prospects of individual companies, particular sectors, governments or countries and/or general economic conditions throughout the world. Price changes may be temporary or last for extended periods. The Fund's investments may be overweighted from time to time in one or more sectors, countries or regions, which will increase the Fund's exposure to risk of loss from adverse developments affecting those sectors, countries or regions.

Global economies and financial markets are becoming increasingly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. Furthermore, local, regional and global events such as war, military conflict, geopolitical disputes, acts of terrorism, social or political unrest, natural disasters, recessions, inflation, rapid interest rate changes, supply chain disruptions, tariffs and other restrictions on trade, sanctions or the spread of infectious illness or other public health threats, or the threat or potential of one or more such events and developments, could also adversely impact issuers, markets and economies, including in ways that cannot necessarily be foreseen. The Fund could be negatively impacted if the value of a portfolio holding were harmed by such political or economic conditions or events. In addition, governmental and quasi-governmental organizations have taken a number of unprecedented actions designed to support the markets. Such conditions, events and actions may result in greater market risk.

- **Mortgage-Backed and Other Asset-Backed Securities Risk**—Mortgage-related and other asset-backed securities are subject to credit/default, interest rate and certain additional risks. Generally, rising interest rates tend to extend the duration of fixed rate Mortgage-Backed Securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if the Fund holds Mortgage-Backed Securities, it may exhibit additional volatility. This is known as extension risk. In addition,

adjustable and fixed rate Mortgage-Backed Securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Fund because the Fund may have to reinvest that money at the lower prevailing interest rates. Due to these risks, asset-backed securities may become more volatile in certain interest rate environments.

The Fund's investments in other asset-backed securities are subject to risks similar to those associated with Mortgage-Backed Securities, as well as additional risks associated with the nature of the assets and the servicing of those assets. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk.

The Fund may invest in Mortgage-Backed Securities issued by the U.S. Government (see "U.S. Government Securities Risk"). To the extent that the Fund invests in Mortgage-Backed Securities offered by non-governmental issuers, such as commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers, the Fund may be subject to additional risks. Timely payment of interest and principal of non-governmental issuers are supported by various forms of private insurance or guarantees, including individual loan, title, pool and hazard insurance purchased by the issuer. There can be no assurance that the private insurers can meet their obligations under the policies. An unexpectedly high rate of defaults on the mortgages held by a mortgage pool may adversely affect the value of a mortgage-backed security and could result in losses to the Fund. The risk of such defaults is generally higher in the case of mortgage pools that include subprime mortgages or during periods of rising interest rates. Subprime mortgages refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their mortgages.

The values of, and income generated by, commercial mortgage-backed securities ("CMBS") may be adversely affected by changing interest rates and other developments impacting the commercial real estate market, such as population shifts and other demographic changes, increasing vacancies (potentially for extended periods) and reduced demand for commercial and office space as well as maintenance or tenant improvement costs and costs to convert properties for other uses. These developments could result from, among other things, changing tastes and preferences (such as for remote work arrangements) as well as cultural, technological, global or local economic and market developments. In addition, changing interest rate environments and associated changes in lending standards and higher refinancing rates may adversely affect the commercial real estate and CMBS markets. The occurrence of any of the foregoing developments would likely increase default risk for the properties and loans underlying these investments as well as impact the value of, and income generated by, these investments. These developments could also result in reduced liquidity for CMBS and other real estate-related investments.

The Fund may gain exposure to Agency Mortgage-Backed Securities by utilizing TBA agreements. TBA agreements involve the risk that the other party to the transaction will not meet its obligation. If this occurs, the Fund could lose the opportunity to obtain a price or yield that it considers advantageous. In such circumstances, the Fund may not be able to secure an alternative investment with comparable terms. TBA agreements may give rise to a form of leverage. The Fund's use of TBA agreements may also result in a higher portfolio turnover rate and/or increased capital gains for the Fund.

- **Municipal Securities Risk**—Municipal securities are subject to call/prepayment risk, credit/default risk, extension risk, interest rate risk and certain additional risks. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the debt securities of similar projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal securities (such as general obligation bonds, private activity bonds and moral obligation bonds). While interest earned on municipal securities is generally not subject to federal tax, any interest earned on taxable municipal securities is fully taxable at the federal level and may be subject to tax at the state level. Specific risks are associated with different types of municipal securities.

With respect to general obligation bonds, the full faith, credit and taxing power of the municipality that issues a general obligation bond secures payment of interest and repayment of principal. Certain of the municipalities in which the Funds invest may experience significant financial difficulties, which may lead to bankruptcy or default. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. With respect to revenue bonds, payments of interest and principal are made only from the revenues generated by a particular facility, class of facilities or the proceeds of a special tax, or other revenue source, and depends on the money earned by that source. Private activity bonds are issued by municipalities and other public authorities to finance development of industrial facilities for use by a private enterprise. The private enterprise pays the principal and interest on the bond, and the issuer does not pledge its full faith, credit and taxing power for repayment. If the private enterprise defaults on its payments, the Fund may not receive any income or get its money back from the investment. Moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality. Municipal notes are shorter term municipal debt obligations. They may provide interim financing in anticipation of, and are secured by, tax collection, bond sales or revenue receipts. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money. In a municipal lease obligation, the issuer agrees to make payments when due on

the lease obligation. The issuer will generally appropriate municipal funds for that purpose, but is not obligated to do so. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property. However, if the issuer does not fulfill its payment obligation it may be difficult to sell the property and the proceeds of a sale may not cover the Fund's loss.

- **NAV Risk**—The net asset value of the Fund and the value of your investment will fluctuate.
- **Other Investment Companies Risk**—By investing in other investment companies (including ETFs), indirectly through the Fund, investors will incur a proportionate share of the expenses of the other investment companies held by the Fund (including operating costs and investment management fees) in addition to the fees and expenses regularly borne by the Fund. In addition, the Fund will be affected by the investment policies, practices and performance of such investment companies in direct proportion to the amount of assets the Fund invests therein.
- **Portfolio Turnover Rate Risk**—The Fund may engage in active and frequent trading of portfolio securities to pursue its principal investment strategy. A high rate of portfolio turnover may involve correspondingly greater expenses which must be borne by the Fund and its shareholders, and also may result in short-term capital gains taxable to shareholders.
- **Reverse Repurchase Agreements Risk**—Reverse repurchase agreements involve the sale of securities held by the Fund subject to an agreement to repurchase them at a mutually agreed upon date and price (including interest). The Fund may enter these transactions when the Investment Adviser expects that the return to be earned from the investment of the transaction proceeds to be greater than the interest expense of the transaction. Reverse repurchase agreements may also be entered into as a temporary measure for emergency purposes or to meet redemption requests.

Reverse repurchase agreements are a form of secured borrowing and subject the Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested. If the securities held by the Fund decline in value while these transactions are outstanding, the NAV of the Fund's outstanding shares will decline in value by proportionately more than the decline in value of the securities. In addition, reverse repurchase agreements involve the risk that the investment return earned by the Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by the Fund will decline below the price the Fund is obligated to pay to repurchase the securities, and that the other party may fail to return the securities in a timely manner or at all.

When the Fund enters into a reverse repurchase agreement, it is subject to the risk that the buyer under the agreement may file for bankruptcy, become insolvent or otherwise default on its obligations to the Fund. In the event of a default by the counterparty, there may be delays, costs and risks of loss involved in the Fund's exercising its rights under the agreement, or those rights may be limited by other contractual agreements or obligations or by applicable law. Such an insolvency may result in a loss equal to the amount by which the value of the securities or other assets sold by the Fund exceeds the repurchase price payable by the Fund; if the value of the purchased securities or other assets increases during such a delay, that loss may also be increased. The Fund could lose money if it is unable to recover the securities or if the value of investments made by the Fund using the proceeds of the transaction is less than the value of securities.

- **Short Position Risk**—The Fund may use derivatives, including futures and swaps, to implement short positions, and may engage in short selling. Taking short positions and short selling involve leverage of the Fund's assets and present various risks. If the value of the instrument or market in which the Fund has taken a short derivative position on increases, then the Fund will incur a loss equal to the increase in value from the time that the short position was entered into plus any premium and interest paid to a third party. Therefore, taking short derivative positions involves the risk that losses may be exaggerated, potentially losing more money than the actual cost of the investment. Also, there is the risk that the third party to the short derivative transaction may fail to honor its contract terms, causing a loss to the Fund.

The Fund may make short sales of any instrument that the Fund may purchase for investment. In such transactions, the Fund sells an instrument it does not own (*i.e.*, "naked" short) in anticipation of a decline in the market value of the instrument. Because selling instruments that the Fund does not own exposes the Fund to the risks associated with those instruments, naked shorts involve speculative exposure risk, and such transactions may increase the costs incurred by the Fund.

In order to sell an instrument short, the Fund must generally first borrow the instrument from a lender, such as a broker or other institution. The Fund may not always be able to borrow the instrument at a particular time or at an acceptable price. Thus, there is risk that the Fund may be unable to implement its investment strategy due to the lack of available instruments or for other reasons.

After selling a borrowed instrument, the Fund is then obligated to "cover" the short sale by purchasing and returning the instrument to the lender on a later date. The Fund cannot guarantee that the instrument necessary to cover a short position will be available for purchase at the time the Fund wishes to close a short position or, if available, that the instrument will be available at an acceptable price. If the borrowed instrument has appreciated in value, the Fund will be required to pay more for the replacement instrument than the amount it received for selling the instrument short. Moreover, purchasing an instrument to cover a short position can itself cause the price of the instrument to rise further, thereby exacerbating the loss. Unlike purchasing an instrument, where potential

losses are limited to the purchase price and there is no upside limit on potential gain, the potential loss on a short sale is unlimited because the loss increases as the price of the instrument sold short increases and the price may rise indefinitely. If the price of a borrowed instrument declines before the short position is covered, the Fund may realize a gain. The Fund's gain on a short sale, before transaction and other costs, is generally limited to the difference between the price at which it sold the borrowed instrument and the price it paid to purchase the instrument to return to the lender.

While the Fund has an open short position, it is subject to the risk that the instrument's lender will terminate the loan at a time when the Fund is unable to borrow the same instrument from another lender. If this happens, the Fund may be required to buy the replacement instrument immediately at the instrument's then current market price or "buy in" by paying the lender an amount equal to the cost of purchasing the instrument to close out the short position.

Short sales also involve other costs. The Fund must normally repay to the lender an amount equal to any dividends or interest that accrues while a loan is outstanding. In addition, to borrow an instrument, the Fund may be required to pay a premium. The Fund also will incur transaction costs in effecting short sales. The amount of any ultimate gain for the Fund resulting from a short sale will be decreased, and the amount of any ultimate loss will be increased, by the amount of premiums, dividends, interest or expenses the Fund may be required to pay in connection with the short sale.

Until the Fund replaces a borrowed instrument, the Fund may be required to maintain short sale proceeds with the lending broker as collateral. Moreover, the Fund will be required to make margin payments to the lender during the term of the borrowing if the value of the instrument it borrowed (and short sold) increases. Thus, short sales involve credit exposure to the broker that executes the short sales. In the event of the bankruptcy or other similar insolvency with respect to a broker with whom the Fund has an open short position, the Fund may be unable to recover, or delayed in recovering, any margin or other collateral held with or for the lending broker.

Short Sales of TBA Securities Risk. The Fund intends to make short sales of TBA securities. TBA transactions are forward agreements for the purchase or sale of securities, including Mortgage-Backed Securities, for a fixed price, with payment and delivery on an agreed upon future settlement date. The specific securities to be delivered are not identified at the trade date. However, delivered securities must meet specified terms, including, for TBA Mortgage-Backed Securities, issuer, rate and mortgage terms. Although most TBA short sale transactions are closed before the Fund would be required to deliver the instrument, if the Fund does not close the position, the Fund may have to purchase the securities required to be delivered at a higher price than anticipated, causing a loss to the Fund. The Fund may not always be able to purchase the securities required to settle a short at a particular time or at an attractive price.

- **U.S. Government Securities Risk**—The U.S. government may not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. U.S. government securities issued by those agencies, instrumentalities and sponsored enterprises, including those issued by Fannie Mae, Freddie Mac and the Federal Home Loan Banks, are neither issued nor guaranteed by the U.S. Treasury and, therefore, are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. government securities held by the Fund may greatly exceed their current resources, including any legal right to support from the U.S. Treasury. It is possible that issuers of U.S. government securities will not have the funds to meet their payment obligations in the future. Fannie Mae and Freddie Mac have been operating under conservatorship, with the Federal Housing Finance Agency ("FHFA") acting as their conservator, since September 2008. The entities are dependent upon the continued support of the U.S. Treasury and FHFA in order to continue their business operations. These factors, among others, could affect the future status and role of Fannie Mae and Freddie Mac and the value of their securities and the securities which they guarantee. Additionally, the U.S. government and its agencies and instrumentalities do not guarantee the market values of their securities, which may fluctuate.

More information about the Fund's portfolio securities and investment techniques, and its associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Service Providers

INVESTMENT ADVISER

Investment Adviser	Fund
Goldman Sachs Asset Management, L.P. 200 West Street New York, NY 10282	U.S. Mortgages

GSAM has been registered as an investment adviser with the SEC since 1990 and is an indirect, wholly-owned subsidiary of The Goldman Sachs Group, Inc. and an affiliate of Goldman Sachs. Founded in 1869, The Goldman Sachs Group, Inc. is a publicly-held financial holding company and a leading global investment banking, securities and investment management firm. As of December 31, 2025, GSAM, including its investment advisory affiliates, had assets under supervision of approximately \$3.35 trillion.

The Investment Adviser provides day-to-day advice regarding the Fund’s portfolio transactions. The Investment Adviser makes the investment decisions for the Fund and places purchase and sale orders for the Fund’s portfolio transactions in U.S. and foreign markets. As permitted by applicable law, these orders may be directed to any executing brokers, dealers, futures commission merchants (“FCMs”) or other counterparties, including Goldman Sachs and its affiliates. While the Investment Adviser is ultimately responsible for the management of the Fund, it is able to draw upon the research and expertise of its asset management affiliates for portfolio decisions and management with respect to certain portfolio securities. In addition, the Investment Adviser has access to the research and certain proprietary technical models developed by Goldman Sachs (subject to legal, internal, regulatory and Chinese Wall restrictions), and will apply quantitative and qualitative analysis in determining the appropriate allocations among categories of issuers and types of securities.

The Investment Adviser also performs the following additional services for the Fund (to the extent not performed by others pursuant to agreements with the Fund):

- Supervises all non-advisory operations of the Fund
- Provides personnel to perform necessary executive, administrative and clerical services to the Fund
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities
- Maintains the records of the Fund
- Provides office space and all necessary office equipment and services

An investment in the Fund may be negatively impacted because of the operational risks arising from factors such as processing errors and human errors, inadequate or failed internal or external processes, failures in systems and technology, changes in personnel, and errors caused by third-party service providers or trading counterparties. The use of certain investment strategies that involve manual or additional processing, such as over-the-counter derivatives, increases these risks. Although the Fund attempts to minimize such failures through controls and oversight, it is not possible to identify all of the operational risks that may affect the Fund or to develop processes and controls that completely eliminate or mitigate the occurrence of such failures. The Fund and its shareholders could be negatively impacted as a result.

From time to time, Goldman Sachs or its affiliates may invest “seed” capital in the Fund. These investments are generally intended to enable the Fund to commence investment operations and achieve sufficient scale. Goldman Sachs and its affiliates may hedge the exposure of the seed capital invested in the Fund by, among other things, taking an offsetting position in the benchmark of the Fund.

MANAGEMENT FEES AND OTHER EXPENSES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund’s average daily net assets):

Fund:	Management Fee Annual Rate	Average Daily Net Assets	Actual Rate For the Fiscal Year Ended March 31, 2025*
U.S. Mortgages	0.34%	First \$1 billion	0.34%
	0.31%	Next \$1 billion	
	0.29%	Next \$3 billion	
	0.28%	Over \$5 billion	

* *The Actual Rate may not correlate to the Contractual Management Fee Annual Rate as a result of management fee waivers that may be in effect from time to time.*

The Investment Adviser has agreed to waive a portion of its management fee for the Fund in an amount equal to any management fees it earns as an investment adviser to any of the affiliated funds in which the Fund invests based on the Fund’s investments in such affiliated funds. This management fee waiver will remain in effect through at least July 29, 2027, and prior to such date the Investment Adviser may not terminate the arrangement without the approval of the Board of Trustees. A management fee waiver may be modified or terminated by the Investment Adviser at its discretion and without shareholder approval after such date, though the Investment Adviser does not presently intend to do so.

In addition to the management fee waiver described above, the Investment Adviser may waive an additional portion of its management fee from time to time, and may discontinue or modify any such waivers in the future, consistent with the terms of any fee waiver arrangements in place.

The Investment Adviser has agreed to reduce or limit “Other Expenses” (excluding acquired fund fees and expenses, transfer agency fees and expenses, service fees (as applicable), shareholder administration fees (as applicable), administration fees (as applicable), taxes, interest, brokerage fees, expenses of shareholder meetings, litigation and indemnification, and extraordinary expenses) to 0.074% of the average daily net assets of the Fund through at least July 29, 2027, and prior to such date the Investment Adviser may not terminate the arrangement without the approval of the Board of Trustees. The expense limitation may be modified or terminated by the Investment Adviser at its discretion and without shareholder approval after such date, although the Investment Adviser does not presently intend to do so. The Fund’s “Other Expenses” may be further reduced by any custody and transfer agency fee credits received by the Fund.

A discussion regarding the basis for the Board of Trustees’ approval of the Management Agreements for the Fund in 2025 is available in the Fund’s N-CSR dated September 30, 2025.

FUND MANAGERS

Fixed Income Portfolio Management Team

The individuals jointly and primarily responsible for the day-to-day management of the Fund are listed below. The Fund’s portfolio managers’ individual responsibilities may differ and may include, among other things, security selection, asset allocation, risk budgeting and general oversight of the management of the Fund’s portfolios.

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Peter Stone Managing Director	Portfolio Manager— U.S. Mortgages Fund	Since July 2025	Mr. Stone joined the Investment Adviser in 2007. He is the Head of the North American Government Swaps Strategy within GSAM and is a member of the Duration Strategy team.
Rob Pyne Managing Director	Portfolio Manager— U.S. Mortgages Fund	Since 2022	Mr. Pyne joined the Investment Adviser in 2009. He is co-head of the Global Securitized Investment team.

For information about the portfolio managers’ compensation, other accounts managed by the portfolio managers and the portfolio managers’ ownership of securities in the Funds, see the SAI.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 200 West Street, New York, NY 10282, serves as the exclusive distributor (the “Distributor”) of each Fund’s shares. Goldman Sachs, 71 South Wacker Drive, Suite 1200, Chicago, IL 60606, also serves as each Fund’s transfer agent (the “Transfer Agent”) and, as such, performs various shareholder servicing functions.

For its transfer agency services, Goldman Sachs is entitled to receive a transfer agency fee equal, on an annualized basis, to 0.04% of average daily net assets with respect to the Service Shares and 0.12% of average daily net assets with respect to the Class R Shares.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs and its affiliates reserve the right to redeem at any time some or all of the shares acquired for their own accounts.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs will present conflicts of interest with respect to the Fund and will, under certain circumstances, limit the Fund's investment activities. Goldman Sachs is a worldwide, full service investment banking, broker dealer, asset management and financial services organization and a major participant in global financial markets that provides a wide range of financial services to a substantial and diversified client base that includes corporations, financial institutions, governments and individuals. As such, it acts as a broker-dealer, investment adviser, investment banker, underwriter, research provider, administrator, financier, adviser, market maker, trader, prime broker, derivatives dealer, clearing agent, lender, custodian, counterparty, agent, principal, distributor, investor or in other commercial capacities for accounts or companies (including Fund portfolio companies) or affiliated or unaffiliated investment funds (including pooled investment vehicles and private funds) in which one or more accounts, including the Fund, invest. In those and other capacities, Goldman Sachs and its affiliates advise and deal with clients and third parties in all markets and transactions and purchase, sell, hold and recommend a broad array of investments, including securities, derivatives, loans, commodities, currencies, credit default swaps, indices, baskets and other financial instruments and products for their own accounts or for the accounts of their customers and have other direct and indirect interests in the global fixed income, currency, commodity, equities, bank loans and other markets and the securities and issuers in which the Fund directly and indirectly invests. Thus, it is expected that the Fund will have multiple business relationships with and will invest in, engage in transactions with, make voting decisions with respect to, or obtain services from entities for which Goldman Sachs and its affiliates perform or seek to perform investment banking or other services. The Investment Adviser and/or certain of its affiliates are the managers of the Goldman Sachs Funds (as defined below). The Investment Adviser and its affiliates earn fees from this and other relationships with the Fund. Although management fees paid by the Fund to the Investment Adviser and certain other fees paid to the Investment Adviser's affiliates are based on asset levels, the fees are not directly contingent on Fund performance, and the Investment Adviser and its affiliates will still receive significant compensation from the Fund even if shareholders lose money. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Fund and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Fund. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Fund. The results of the Fund's investment activities, therefore, will likely differ from those of Goldman Sachs, its affiliates, and other accounts managed by Goldman Sachs, and it is possible that the Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Fund may enter into transactions in which Goldman Sachs and its affiliates or their other clients have an adverse interest. For example, the Fund may take a long position in a security at the same time that Goldman Sachs and its affiliates or other accounts managed by the Investment Adviser or its affiliates take a short position in the same security (or vice versa). These and other transactions undertaken by Goldman Sachs, its affiliates or Goldman Sachs-advised clients may, individually or in the aggregate, adversely impact the Fund. Transactions by one or more Goldman Sachs-advised clients or the Investment Adviser may have the effect of diluting or otherwise disadvantaging the values, prices or investment strategies of the Fund. The Fund's activities will, under certain circumstances, be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions. As a global financial services firm, Goldman Sachs and its affiliates also provide a wide range of investment banking and financial services to issuers of securities and investors in securities. Goldman Sachs, its affiliates and others associated with it are expected to create markets or specialize in, have positions in and/or effect transactions in, securities of issuers held by the Fund, and will likely also perform or seek to perform investment banking and financial services for one or more of those issuers. Goldman Sachs and its affiliates are expected to have business relationships with and purchase or distribute or sell services or products from or to distributors, consultants or others who recommend the Fund or who engage in transactions with or for the Fund. For more information about conflicts of interest, see the section titled "Potential Conflicts of Interest" in the SAI.

The Fund will, from time to time, make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Fund's portfolio investment transactions, in accordance with applicable law.

Distributions

The Fund pays distributions from its investment income and from net realized capital gains. You may choose to have distributions paid in:

- Cash
- Additional shares of the same class of the same Fund
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply. See the SAI.

You may indicate your election on your account application. Any changes may be submitted in writing or via telephone, in some instances, to the Transfer Agent (either directly or through your Intermediary) at any time before the record date for a particular distribution. If you do not indicate any choice, your distributions will be reinvested automatically in the Fund. If cash distributions are elected with respect to the Fund's monthly net investment income, then cash distributions must also be elected with respect to the net short-term capital gains component, if any, of the Fund's annual distributions.

The election to reinvest distributions in additional shares will not affect the tax treatment of such distributions, which will be treated as received by you and then used to purchase the shares.

Distributions from net investment income and distributions from net capital gains, if any, are normally declared and paid as follows:

Fund	Investment Income Dividends		Capital Gains Distributions
	Declared	Paid	Declared and Paid
U.S. Mortgages	Daily	Monthly	Annually

In addition, the Fund may occasionally make a distribution at a time when it is not normally made.

In addition to the net investment income dividends declared and paid as set forth above, the Fund may also earn additional net investment income throughout the year. Any additional net investment income will be distributed annually as a declared event and paid to shareholders of record for such events.

From time to time a portion of the Fund's distributions may constitute a return of capital for tax purposes, and/or may include amounts in excess of the Fund's net investment income for the period calculated in accordance with generally accepted accounting principles ("GAAP").

When you purchase shares of the Fund, part of the NAV per share may be represented by undistributed income and/or realized gains that have previously been earned by the Fund. Therefore, subsequent distributions on such shares from such income and/or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most frequently asked questions regarding buying and selling the Fund's shares.

HOW TO BUY SHARES

Shares Offering

Shares of the Fund are continuously offered through the Distributor. The Fund and the Distributor will have the sole right to accept orders to purchase shares and reserve the right to reject any purchase order in whole or in part.

How Can I Purchase Shares Of The Fund?

You may purchase shares of the Fund through certain intermediaries that have a relationship with Goldman Sachs, including banks, trust companies, brokers, registered investment advisers and other financial institutions ("Intermediaries"). Certain Intermediaries have been authorized by Goldman Sachs Trust (the "Trust") to accept purchase, redemption or exchange orders on behalf of the Fund for its customers ("Authorized Institutions"), and if approved by the Fund, may designate other financial intermediaries to accept such orders. You should contact your Intermediary to learn whether it is authorized to accept orders on behalf of the Fund (i.e., an Authorized Institution). In order to make an initial investment in the Fund you must furnish to your Intermediary the information in the account application.

The decision as to which class to purchase depends on the amount you invest, the intended length of the investment and your personal situation. You should contact your Intermediary to discuss which share class option is right for you.

Note: Intermediaries may receive different compensation for selling different share classes.

To open an account, contact your Intermediary. Customers of an Intermediary will normally give their order instructions to the Intermediary, and the Intermediary will, in turn, place the order with the Transfer Agent. Intermediaries are responsible for transmitting accepted orders and payments to the Transfer Agent within the time period agreed upon by them and will set times by which orders and payments must be received by them from their customers. The Trust, Transfer Agent, Investment Adviser and their affiliates will not be responsible for any loss in connection with orders that are not transmitted to the Transfer Agent by an Intermediary on a timely basis.

The Fund will be deemed to have received an order for purchase, redemption or exchange of Fund shares when the order is accepted in "proper form" by the Transfer Agent (or, if applicable, by an Authorized Institution) on a business day, and the order will be priced at the Fund's current NAV per share (adjusted for any applicable sales charge) next determined after acceptance by the Transfer Agent (or, if applicable, by an Authorized Institution). For shareholders that place trades directly with the Fund's Transfer Agent, proper form generally means that specific trade details and customer identifying information must be received by the Transfer Agent at the time an order is submitted. Intermediaries of the Fund may have different requirements regarding what constitutes proper form for trade instructions. Please contact your Intermediary for more information.

For purchases by check, the Fund will not accept checks drawn on foreign banks, third party checks, temporary checks, cash or cash equivalents; e.g., cashier's checks, official bank checks, money orders, traveler's cheques or credit card checks. In limited situations involving the transfer of retirement assets, a Fund may accept cashier's checks or official bank checks.

Class R Shares are not sold directly to the public. Instead Class R Shares generally are available only to Section 401(k), 403(b), 457, profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, non-qualified deferred compensation plans and non-qualified pension plans or other employee benefit plans (including health savings accounts) or SIMPLE plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations ("Employee Benefit Plans"). Class R Shares are not available to traditional and Roth Individual Retirement Accounts ("IRAs"), SEPs and SARSEPs; except that Investor Shares are available to such accounts or plans to the extent they are purchased through a fee-based program that is sponsored and maintained by an Intermediary that has entered into a contractual relationship with Goldman Sachs to offer such shares through such programs ("Eligible Fee-Based Program"). Employee Benefit Plans and Eligible Fee-Based Programs must purchase Class R Shares through an Intermediary using a plan level or omnibus account.

Employee Benefit Plans generally may open an account and purchase Class R Shares through Intermediaries, financial planners, Employee Benefit Plan administrators and other financial intermediaries. Class R Shares may not be available through certain Intermediaries. Additional shares may be purchased through an Employee Benefit Plan's administrator or record-keeper.

What Is My Minimum Investment In The Fund?

No minimum amount is required for initial purchases in Class R Shares (except as provided below) or additional investments in Class R Shares.

There are no minimum purchase or account (minimum) requirements with respect to Service Shares. An Intermediary may, however, impose a minimum amount for initial and additional investments in Service Shares, and may establish other requirements such as a minimum account balance. An Intermediary may redeem Service Shares held by non-complying accounts, and may impose a charge for any special services.

What Should I Know When I Purchase Shares Through An Intermediary?

If shares of the Fund are held in an account maintained and serviced by your Intermediary, all recordkeeping, transaction processing and payments of distributions relating to your account will be performed by your Intermediary, and not by the Fund and its Transfer Agent. Since the Fund will have no record of your transactions, you should contact your Intermediary to purchase, redeem or exchange shares, to make changes in or give instructions concerning your account or to obtain information about your account. The transfer of shares from an account with one Intermediary to an account with another Intermediary involves special procedures and may require you to obtain historical purchase information about the shares in the account from your Intermediary. If your Intermediary's relationship with Goldman Sachs is terminated, and you do not transfer your account to another Intermediary, the Trust reserves the right to redeem your shares. The Trust will not be responsible for any loss in an investor's account or tax liability resulting from a redemption.

Certain Intermediaries may provide the following services in connection with their customers' investments in Service Shares:

- Personal and account maintenance services
 - Provide facilities to answer inquiries and respond to correspondence
 - Act as liaison between the Intermediary's customers and the Trust
 - Assist customers in completing application forms, selecting dividend and other options, and similar services
- Shareholder administration services
 - Act, directly or through an agent, as the sole shareholder of record
 - Maintain account records for customers
 - Process orders to purchase, redeem and exchange shares for customers
 - Process payments for customers

Intermediaries that invest in shares on behalf of their customers may charge brokerage commissions or other fees directly to their customer accounts in connection with their investments. You should contact your Intermediary for information regarding such charges, as these fees, if any, may affect the return such customers realize with respect to their investments.

The Investment Adviser, Distributor and/or their affiliates may make payments or provide services to Intermediaries and other persons to promote the sale, distribution and/or servicing of shares of the Fund and other Goldman Sachs Funds, except that the Investment Adviser, Distributor and their affiliates do not make such payments on behalf of Class R6 Shares. These payments are made out of the Investment Adviser's, Distributor's and/or their affiliates' own assets, and are not an additional charge to the Fund. The payments are in addition to the distribution and service fees, service fees and shareholder administration fees and sales charges described in the Prospectus. Such payments are intended to compensate Intermediaries and other persons for, among other things: marketing shares of the Fund and other Goldman Sachs Funds, which may consist of payments relating to the Fund's inclusion on preferred or recommended fund lists or in certain sales programs sponsored by the recipients; access to the Intermediaries' registered representatives or salespersons, including at conferences and other meetings; assistance in training and education of personnel; marketing support; the provision of analytical or other data to the Investment Adviser or its affiliates relating to sales of shares of the Fund and other Goldman Sachs Funds; the support or purchase of technology platforms/software; and/or other specified services intended to assist in the distribution and marketing of the Fund and other Goldman Sachs Funds, including provision of consultative services to the Investment Adviser or its affiliates relating to marketing and/or sale of shares of the Fund and other Goldman Sachs Funds. The payments may also, to the extent permitted by applicable regulations, sponsor various trainings and educational programs. The payments by the Investment Adviser, Distributor and/or their affiliates, which are in addition to the fees paid for these services by the Fund, may also compensate Intermediaries and other persons for sub-accounting, sub-transfer agency, administrative, shareholder processing and/or recordkeeping services. These additional payments may exceed amounts earned on these assets by the Investment Adviser, Distributor and/or their affiliates for the performance of these or similar services. The amount of these additional payments is normally not expected to exceed 0.50% (annualized) of the amount sold or invested through the recipients. In addition, certain Intermediaries may have access to certain services from the Investment Adviser, Distributor and/or their affiliates, including research

reports, economic analysis, and portfolio analysis, portfolio construction and similar tools and software. In certain cases, the Intermediaries may not pay for these products or services or may only pay for a portion of the total cost of these products or services. Please refer to the “Payments to Others (Including Intermediaries)” section of the SAI for more information about these and similar payments and services.

The payments made by the Investment Adviser, Distributor and/or their affiliates and the services provided by an Intermediary or other person may differ for different Intermediaries and other persons. The presence of these and similar payments, receipt of these services and the basis on which an Intermediary compensates its registered representatives or salespersons may create an incentive for a particular Intermediary, registered representative, salesperson or other person to highlight, feature or recommend the Fund based, at least in part, on the level of compensation paid. You should contact your Intermediary, or any other person that provides services to you, for more information about the payments it receives and any potential conflicts of interest.

You may be required to pay a commission directly to a broker or financial intermediary for effecting transactions in Institutional Shares. In addition to Institutional Shares, the Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance) and are entitled to different services than Institutional Shares. Information regarding these other share classes is included in the Prospectus for the applicable share class and may also be obtained from your Intermediary or from Goldman Sachs by calling the number on the back cover of the Prospectus.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Refuse to open an account or require an Intermediary to refuse to open an account if you fail to (i) provide a taxpayer identification number, a Social Security Number or other government-issued identification (e.g., for an individual, a driver’s license or passport); or (ii) certify that such number or other information is correct (if required to do so under applicable law).
- Reject or restrict any purchase or exchange order by a particular purchaser (or group of related purchasers) for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of shares of the Fund is evident, or if purchases, sales or exchanges are, or a subsequent redemption might be, of a size that would disrupt the management of the Fund.
- Close the Fund to new investors from time to time and reopen any such Fund whenever it is deemed appropriate by the Investment Adviser.
- Provide for, modify or waive the minimum investment requirements.
- Modify the manner in which shares are offered.
- Modify the sales charge rate applicable to future purchases of shares.

Shares of the Fund are only registered for sale in the United States and certain of its territories. Generally, shares of the Fund will only be offered or sold to “U.S. persons” and offerings or other solicitation activities will be conducted within the United States, in accordance with the rules and regulations of the Securities Act of 1933, as amended (“Securities Act”).

The Fund may allow you to purchase shares through an Intermediary with securities instead of cash if consistent with the Fund’s investment policies and operations and approved by the Investment Adviser.

Notwithstanding the foregoing, the Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. The Trust and Goldman Sachs will not be liable for any loss resulting from rejected purchase or exchange orders.

Please be advised that abandoned or unclaimed property laws for certain states (to which your account may be subject) require financial organizations to transfer (escheat) unclaimed property (including shares of the Fund) to the appropriate state if no activity occurs in an account for a period of time specified by state law. For IRA accounts escheated to a state under these abandoned property laws, the escheatment will generally be treated as a taxable distribution to you; federal and any applicable state income tax will be withheld. This may apply to your Roth IRA as well.

Customer Identification Program. Federal law requires the Fund to obtain, verify and record identifying information for certain investors, which will be reviewed solely for customer identification purposes, which may include the name, residential or business street address, date of birth (for an individual), Social Security Number or taxpayer identification number or other information for each investor who opens an account directly with the Fund. Applications without the required information may not be accepted by the Fund. Throughout the life of your account, the Fund may request updated identifying information in accordance with their Customer Identification Program. After accepting an application, to the extent permitted by applicable law or their Customer Identification Program, the Fund reserves the right to: (i) place limits on transactions in any account until the identity of the investor is verified; (ii) refuse an investment in the Fund; or (iii) involuntarily redeem an investor’s shares and close an account in the event that the Fund is unable to verify an investor’s identity or are unable to obtain all required information. The Fund and its agents will not be responsible for any loss or tax liability in an investor’s account resulting from the investor’s delay in providing all required information or from closing an account and redeeming an investor’s shares pursuant to their Customer Identification Program.

How Are Shares Priced?

The price you pay when you buy shares is the Fund's next-determined NAV per share (as adjusted for any applicable sales charge) after the Transfer Agent (or, if applicable, an Authorized Institution) has received and accepted your order in proper form. The price you receive when you sell shares is the Fund's next-determined NAV per share (adjusted for any applicable CDSCs) after the Transfer Agent (or, if applicable, an Authorized Institution) has received and accepted your order in proper form, with the redemption proceeds reduced by any applicable charges (e.g., CDSCs). Each class generally calculates its NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

The Fund's investments for which market quotations are readily available are valued at market value on the basis of quotations provided by pricing sources. If accurate quotations are not readily available, if the Fund's fund accounting agent is unable for other reasons to facilitate pricing of individual securities or calculate the Fund's NAV, or if the Investment Adviser believes that such quotations do not accurately reflect fair value, the fair value of the Fund's investments may be determined in good faith under valuation procedures approved by the Board of Trustees. Thus, such pricing may be based on subjective judgments and it is possible that the prices resulting from such valuation procedures may differ materially from the value realized on a sale. Cases where there is no clear indication of the value of the Fund's investments include, among others, situations where a security or other asset or liability does not have a price source or a price is unavailable.

Equity securities listed on an exchange are generally valued at the last available sale price on the exchange on which they are principally traded. To the extent the Fund invests in foreign equity securities, "fair value" prices will be provided by an independent third-party pricing (fair value) service in accordance with the fair value procedures approved by the Board of Trustees. Fair value prices are used because many foreign markets operate at times that do not coincide with those of the major U.S. markets. Events that could affect the values of foreign portfolio holdings may occur between the close of the foreign market and the time of determining the NAV, and would not otherwise be reflected in the NAV.

Fixed income securities are generally valued on the basis of prices (including evaluated prices) and quotations provided by pricing services or securities dealers. Pricing services may use matrix pricing or valuation models, which utilize certain inputs and assumptions, including, but not limited to, yield or price with respect to comparable fixed income securities, to determine current value. Pricing services generally value fixed income securities assuming orderly transactions of an institutional round lot size, but the Fund may hold or transact in such securities in smaller odd lot sizes. Odd lots may trade at lower prices than institutional round lots.

Investments in other open-end registered investment companies (if any), excluding investments in ETFs, are valued based on the NAV of those open-end registered investment companies (which may use fair value pricing as discussed in their prospectuses). Investments in ETFs will generally be valued at the last sale price or official closing price on the exchange on which they are principally traded.

In addition, the Investment Adviser, consistent with its procedures and applicable regulatory guidance, may (but need not) determine to make an adjustment to the previous closing prices of either domestic or foreign securities in light of significant events, to reflect what it believes to be the fair value of the securities at the time of determining the Fund's NAV. Significant events that could affect a large number of securities in a particular market may include, but are not limited to: situations relating to one or more single issuers in a market sector; significant fluctuations in U.S. or foreign markets; market dislocations; market disruptions or unscheduled market closings; equipment failures; natural or man made disasters or acts of God; armed conflicts; governmental actions or other developments; as well as the same or similar events which may affect specific issuers or the securities markets even though not tied directly to the securities markets. Other significant events that could relate to a single issuer may include, but are not limited to: corporate actions such as reorganizations, mergers and buy-outs; corporate announcements, including those relating to earnings, products and regulatory news; significant litigation; ratings downgrades; bankruptcies; and trading limits or suspensions.

One effect of using an independent third-party pricing (fair value) service and fair valuation may be to reduce stale pricing arbitrage opportunities presented by the pricing of Fund shares. However, it involves the risk that the values used by the Fund to price its investments may be different from those used by other investment companies and investors to price the same investments.

Please note the following with respect to the price at which your transactions are processed:

- NAV per share of each share class is generally calculated by the Fund's fund accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern time) or such other times as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed, although Fund shares may be priced on such days if the Securities Industry and Financial Markets Association ("SIFMA") recommends that the bond markets remain open for all or part of the day.
- On any business day when the SIFMA recommends that the bond markets close early, the Fund reserves the right to close at or prior to the SIFMA recommended closing time. If the Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given on the next business day.

- The Trust reserves the right to reprocess purchase (including dividend reinvestments), redemption and exchange transactions that were processed at a NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV, as adjusted.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Consistent with industry practice, investment transactions not settling on the same day are recorded and factored into the Fund's NAV on the business day following trade date (T+1). The use of T+1 accounting generally does not, but may, result in a NAV that differs materially from the NAV that would result if all transactions were reflected on their trade dates.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange and/or the bond markets are stopped at a time other than their regularly scheduled closing times. In the event the New York Stock Exchange and/or the bond markets do not open for business, the Trust may, but is not required to, open the Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether the Fund is open for business during this situation, please call the appropriate phone number located on the back cover of the Prospectus.

Foreign securities may trade in their local markets on days the Fund is closed. As a result, if the Fund holds foreign securities, its NAV may be impacted on days when investors may not purchase or redeem Fund shares.

The Fund relies on various sources to calculate its NAV. The ability of the Fund's fund accounting agent to calculate the NAV per share of each share class of the Fund is subject to operational risks associated with processing or human errors, systems or technology failures, cyber attacks and errors caused by third party service providers, data sources, or trading counterparties. Such failures may result in delays in the calculation of the Fund's NAV and/or the inability to calculate NAV over extended time periods. The Fund may be unable to recover any losses associated with such failures. In addition, if the third party service providers and/or data sources upon which the Fund directly or indirectly relies to calculate its NAV or price individual securities are unavailable or otherwise unable to calculate the NAV correctly, it may be necessary for alternative procedures to be utilized to price the securities at the time of determining the Fund's NAV.

When Will Shares Be Issued And Dividends Begin To Be Accrued?

Net investment income dividends that are declared daily and paid monthly will begin to be accrued as follows:

- Shares Purchased by Federal Funds Wire or ACH Transfer:
 - If a purchase order is received in proper form before the Fund closes, shares will generally be issued and dividends will generally begin to accrue on the purchased shares on the later of (i) the business day after payment is received, or (ii) the day that the federal funds wire is received by The Northern Trust Company. Failure to provide payment on settlement date may result in a delay in accrual.
 - If a purchase order is placed through an Intermediary that settles through the National Securities Clearing Corporation (the "NSCC"), the purchase order will begin accruing dividends on the NSCC settlement date.
- Shares Purchased by Check:
 - If a purchase order is received in proper form before the Fund closes, shares will generally be issued and dividends will generally begin to accrue on the purchased shares no later than two business days after payment is received.

Other dividends or distributions will be distributed annually as a declared event and paid to shareholders of record on the record date for such events.

HOW TO SELL SHARES

How Can I Sell Shares Of The Fund?

Generally, Shares may be sold (redeemed) only through Intermediaries. Customers of an Intermediary will normally give their redemption instructions to the Intermediary, and the Intermediary will, in turn, place the order with the Transfer Agent. On any business day the Fund is open, the Fund will generally redeem its Shares upon request at their next-determined NAV per share after the Transfer Agent (or, if applicable, the Authorized Institution) has received and accepted a redemption order in proper form, as described under "How To Buy Shares—How Can I Purchase Shares Of The Fund?" above. Redemptions may be requested by electronic trading platform (through your Intermediary), in writing or by telephone (unless the Intermediary opts out of the telephone redemption privilege on the account application). You should contact your Intermediary to discuss redemptions and redemption proceeds. The Fund may transfer redemption proceeds to an account with your Intermediary. In the alternative, your Intermediary may request that redemption proceeds be sent to you by check or wire (if the wire instructions are designated in the current records of the Transfer Agent).

When Do I Need A Medallion Signature Guarantee To Redeem Shares?

Generally, a redemption request must be in writing and signed by an authorized person with a Medallion signature guarantee if:

- A request is made in writing to redeem Class R Shares in an amount over \$50,000 via check;
- You would like the redemption proceeds sent to an address that is not your address of record; or
- You would like the redemption proceeds sent to a domestic bank account that is not designated in the current records of the Transfer Agent.

A Medallion signature guarantee must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a Medallion signature guarantee. The written request may be confirmed by telephone with both the requesting party and the designated Intermediary to verify instructions. Additional documentation may be required.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss or tax liability you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. The Trust may accept telephone redemption instructions from any person identifying himself or herself as the owner of an account or the owner's registered representative where the owner has not declined in writing to use this service. Thus, you risk possible losses if a telephone redemption is not authorized by you.

In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs and SS&C Global Investor & Distribution Solutions, Inc. ("SS&C") each employ reasonable procedures specified by the Trust to confirm that such instructions are genuine. The following general policies are currently in effect:

- Telephone requests are recorded.
- Proceeds of telephone redemption requests will be sent to your address of record or authorized account designated in the current records of the Transfer Agent (unless you provide written instructions and a Medallion signature guarantee indicating another address or account).
- For the 30-day period following a change of address, telephone redemptions will only be filled by a wire transfer to the authorized account designated in the current records of the Transfer Agent (see immediately preceding bullet point). In order to receive the redemption by check during this time period, the redemption request must be in the form of a written, Medallion signature guaranteed letter.
- The telephone redemption option does not apply to Shares held in an account maintained and serviced by your Intermediary. If your Shares are held in an account with an Intermediary, you should contact your registered representative of record, who may make telephone redemptions on your behalf.
- The telephone redemption option may be modified or terminated at any time without prior notice.
- The Fund may allow redemptions via check up to \$50,000 in Class R Shares requested via telephone.

Note: It may be difficult to make telephone redemptions in times of unusual economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: You may arrange for your redemption proceeds to be paid as federal funds to an account with your Intermediary or to a domestic bank account designated in the current records of the Transfer Agent. In addition, redemption proceeds may be transmitted through an electronic trading platform to an account with your Intermediary. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be paid in federal funds within one business day (or such other times in accordance with the requirements of your Intermediary) following receipt of a properly executed wire transfer redemption request. In certain circumstances, however (such as unusual market conditions or in cases of very large redemptions or excessive trading), it may take up to seven days to pay redemption proceeds.
- Redemption requests may only be postponed or suspended for longer than seven days as permitted under Section 22(e) of the Investment Company Act of 1940 (the "Investment Company Act") if (i) the New York Stock Exchange is closed for trading or trading is restricted; (ii) an emergency exists which makes the disposal of securities owned by the Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (iii) the SEC, by order or regulation, permits the suspension of the right of redemption.
- If you are selling shares you recently paid for by check or purchased by Automated Clearing House ("ACH"), the Fund will pay you when your check or ACH has cleared, which may take up to 15 days.
- If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed until the Federal Reserve Bank reopens.

- To change the bank wiring instructions designated in the current records of the Transfer Agent, you must send written instructions signed by an authorized person designated in the current records of the Transfer Agent. A Medallion signature guarantee may be required if you are requesting a redemption in conjunction with the change.
- None of the Trust, the Investment Adviser or Goldman Sachs assumes any responsibility for the performance of your bank or Intermediary in the transfer process. If a problem with such performance arises, you should deal directly with your bank or Intermediary.

By Check: You may elect to receive your redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within one business day (or such other times in accordance with the requirements of your Intermediary) following receipt of a properly executed redemption request except in certain circumstances (such as those set forth above with respect to wire transfer redemption requests). If you are selling shares you recently paid for by check or ACH, the Fund will pay you when your check or ACH has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Shares of each Fund continue to earn dividends up to, but not including, the date of settlement.
- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Intermediaries are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Intermediaries may set times by which they must receive redemption requests. Intermediaries may also require additional documentation from you.

The Trust reserves the right to:

- Redeem your shares in the event your Intermediary's relationship with Goldman Sachs is terminated, and you do not transfer your account to another Intermediary or in the event that the Fund is no longer an option in your Employee Benefit Plan or no longer available through your Eligible Fee-Based Program.
- Redeem your shares if your account balance is below the required Fund minimum. The Fund will not redeem your shares on this basis if the value of your account falls below the minimum account balance solely as a result of market conditions. The Fund will give you 60 days prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem your shares in the case of actual or suspected threatening conduct or actual or suspected fraudulent, suspicious or illegal activity by you or any other individual associated with your account.
- Subject to applicable law, redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. In addition, if you receive redemption proceeds in-kind, you will be subject to market gains or losses upon the disposition of those securities.
- Reinvest any amounts (e.g., dividends, distributions or redemption proceeds) which you have elected to receive by check should your check remain uncashed for more than 180 days. No interest will accrue on amounts represented by uncashed checks. Your check will be reinvested in your account at the NAV on the day of the reinvestment. When reinvested, those amounts are subject to the risk of loss like any Fund investment. If you elect to receive distributions in cash and a check remains uncashed for more than 180 days, your cash election may be changed automatically to reinvest and your future dividend and capital gains distributions will be reinvested in the Fund at the NAV as of the date of payment of the distribution. This provision may not apply to certain retirement or qualified accounts, accounts with a non-U.S. address or closed accounts. Your participation in a systematic withdrawal program may be terminated if a check remains uncashed.
- Charge an additional fee in the event a redemption is made via wire transfer.

The Fund typically expects to meet redemption requests by using holdings of cash or cash equivalents and/or proceeds from the sale of portfolio holdings. In addition, under stressed market conditions, as well as for other temporary or emergency purposes, the Fund may distribute redemption proceeds in-kind (instead of cash), access a line of credit or overdraft facility, or borrow through other sources to meet redemption requests.

None of the Trust, the Investment Adviser or Goldman Sachs will be responsible for any loss in an investor's account or tax liability resulting from an involuntary redemption.

Can I Reinvest Redemption Proceeds In The Same Or Another Goldman Sachs Fund?

You may redeem shares of the Fund and reinvest a portion or all of the redemption proceeds in the same share class of another Goldman Sachs Fund at NAV, except as provided below. To be eligible for this privilege, you must have held the shares you want to redeem for at least 30 days and you must reinvest the share proceeds within 90 days after you redeem. You should obtain and read the applicable prospectus before investing in any other Goldman Sachs Fund.

You may reinvest redemption proceeds as follows:

- The reinvestment privilege may be exercised at any time in connection with transactions in which the proceeds are reinvested at NAV in a tax-sheltered employee benefit plan. In other cases, the reinvestment privilege may be exercised once per year upon receipt of a written request.
- You may be subject to tax as a result of a redemption. You should consult your tax adviser concerning the tax consequences of a redemption and reinvestment.

Can I Exchange My Investment From One Goldman Sachs Fund To Another Goldman Sachs Fund?

You may exchange shares of a Goldman Sachs Fund at NAV without the imposition of an initial sales charge or CDSC, if applicable, at the time of exchange for certain shares of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice. You should contact your Intermediary to arrange for exchanges of shares of the Fund for shares of another Goldman Sachs Fund.

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Goldman Sachs Fund you are acquiring before making an exchange. You should be aware that not all Goldman Sachs Funds may offer all share classes.
- Currently, the Fund does not impose any charge for exchanges although the Fund may impose a charge in the future.
- The exchanged shares of the new Goldman Sachs Fund may later be exchanged for shares of the same class of the original Fund held at the next determined NAV without the imposition of an initial sales charge or CDSC. However, if additional shares of the new Goldman Sachs Fund were purchased after the initial exchange, and that Fund's shares do not impose a sales charge or CDSC, then the applicable sales charge or CDSC of the original Fund's shares will be imposed upon the exchange of those shares.
- When you exchange shares subject to a CDSC, no CDSC will be charged at that time. However, for purposes of determining the amount of CDSC applicable to those shares acquired in the exchange, the length of time you have owned the shares will be measured from the date you acquired the original shares subject to a CDSC, and the amount and terms of the CDSC will be those applicable to the original shares acquired and will not be affected by a subsequent exchange.
- Eligible investors may exchange certain classes of shares for another class of shares of the same Fund. For further information, contact your Intermediary.
- All exchanges which represent an initial investment in a Goldman Sachs Fund must satisfy the minimum initial investment requirement of that Fund. This requirement may be waived at the discretion of the Trust. Exchanges into a Goldman Sachs Fund need not meet the traditional minimum investment requirement for that Fund if the entire balance of the original Fund account is exchanged.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of unusual economic or market conditions.
- Goldman Sachs and SS&C may use reasonable procedures described above in "How To Sell Shares—What Do I Need To Know About Telephone Redemption Requests?" in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Normally, a telephone exchange will be made only to an identically registered account.
- Exchanges into Goldman Sachs Funds or certain share classes of Goldman Sachs Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Goldman Sachs Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. Exchanges within Employee Benefit Plan accounts will not result in capital gains or loss for federal or state income tax purposes. You should consult your tax adviser concerning the tax consequences of an exchange.

SHAREHOLDER SERVICES

Can My Distributions From The Fund Be Invested In Other Goldman Sachs Funds?

You may elect to cross-reinvest distributions paid by a Goldman Sachs Fund in shares of the same class of other Goldman Sachs Funds.

- Shares will be purchased at NAV.

- You may elect cross-reinvestment into an identically registered account or a similarly registered account provided that at least one name on the account is registered identically.
- You cannot make cross-reinvestments into a Goldman Sachs Fund unless that Fund's minimum initial investment requirement is met.
- You should obtain and read the prospectus of the Goldman Sachs Fund into which distributions are invested.

What Types Of Reports Will I Be Sent Regarding My Investment?

Intermediaries are responsible for providing any communication from the Fund to shareholders, including but not limited to, prospectuses, prospectus supplements, proxy materials and notices regarding the source of dividend payments under Section 19 of the Investment Company Act. They may charge additional fees not described in the Prospectus to their customers for such services.

You will be provided with a printed confirmation of each transaction in your account and a quarterly account statement if you invest in Class R Shares and a monthly account statement if you invest in Service Shares. If your account is held through your Intermediary, you will receive this information from your Intermediary.

You will also receive an annual shareholder report and a semi-annual shareholder report. If you have consented to the delivery of a single copy of shareholder reports, prospectuses and other information to all shareholders who share the same mailing address with your account, you may revoke your consent at any time by contacting your Intermediary or Goldman Sachs Funds at the appropriate phone number or address found on the back cover of the Prospectus. The Fund will begin sending individual copies to you within 30 days after receipt of your revocation. If your account is held through an Intermediary, please contact the Intermediary to revoke your consent.

DISTRIBUTION AND SERVICE FEES

What Are The Different Distribution And/Or Service Fees Paid By The Fund's Shares?

The Trust has adopted distribution and service plans (each a "Plan") under which Class R Shares bear distribution and/or service fees paid to Goldman Sachs, some of which Goldman Sachs may pay to Intermediaries. Intermediaries seek distribution and/or servicing fee revenues to, among other things, offset the cost of servicing small and medium sized plan investors and providing information about the Funds. If the fees received by Goldman Sachs pursuant to the Plans exceed its expenses, Goldman Sachs may realize a profit from these arrangements. Goldman Sachs generally receives and pays the distribution and service fees on a quarterly basis.

Under the Plans, Goldman Sachs is entitled to a monthly fee for distribution services from each Fund of up to 0.50%, on an annual basis, of the Fund's average daily net assets attributed to Class R Shares. Because these fee is paid out of a Fund's assets on an ongoing basis, over time, these fees will increase the cost of your investment and may cost you more than paying other types of such charges.

The distribution fees are subject to the requirements of Rule 12b-1 under the Investment Company Act, and may be used (among other things) for:

- Compensation paid to and expenses incurred by Intermediaries, Goldman Sachs and their respective officers, employees and sales representatives;
- Commissions paid to Intermediaries;
- Allocable overhead;
- Telephone and travel expenses;
- Interest and other costs associated with the financing of such compensation and expenses;
- Printing of prospectuses for prospective shareholders;
- Preparation and distribution of sales literature or advertising of any type; and
- All other expenses incurred in connection with activities primarily intended to result in the sale of Class R Shares.

Goldman Sachs normally begins accruing the annual 0.50% distribution fees for the Class R Shares as ongoing commissions to Intermediaries immediately. Goldman Sachs generally pays the distribution fee on a quarterly basis.

SERVICE SHARES SERVICE PLAN AND SHAREHOLDER ADMINISTRATION PLAN

The Trust, on behalf of the Fund, has adopted a Service Plan and Shareholder Administration Plan for Service Shares, pursuant to which Goldman Sachs and certain Intermediaries are entitled to receive payments for their services from the Trust. These payments are equal to 0.25% (annualized) for personal and account maintenance services, plus an additional 0.25% (annualized) for shareholder administration services of the average daily net assets of Service Shares of the Fund that are attributable to or held in the name of Goldman Sachs or an Intermediary for its customers. Fees for personal and account maintenance services are paid pursuant to the

Service Shares' Service Plan and are subject to the requirements of Rule 12b-1 under the Investment Company Act. Because these fees are paid out of the Fund's assets on an ongoing basis, over time, these fees will increase the cost of your investment and may cost you more than paying other types of such charges.

RESTRICTIONS ON EXCESSIVE TRADING PRACTICES

Policies and Procedures on Excessive Trading Practices. In accordance with the policy adopted by the Board of Trustees, the Trust discourages frequent purchases and redemptions of Fund shares and does not permit market timing or other excessive trading practices. Purchases and exchanges should be made with a view to longer-term investment purposes only that are consistent with the investment policies and practices of the respective Fund. Excessive, short-term (market timing) trading practices may disrupt portfolio management strategies, increase brokerage and administrative costs, harm Fund performance and result in dilution in the value of Fund shares held by longer-term shareholders. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. The Trust and Goldman Sachs will not be liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust and its shareholders (or Goldman Sachs), the Trust (or Goldman Sachs) will exercise this right if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to the Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together to the extent they can be identified. No waivers of the provisions of the policy established to detect and deter market timing and other excessive trading activity are permitted that would harm the Trust or its shareholders or would subordinate the interests of the Trust or its shareholders to those of Goldman Sachs or any affiliated person or associated person of Goldman Sachs.

As a deterrent to excessive trading, many foreign equity securities held by the Goldman Sachs Funds are priced by an independent pricing service using fair valuation. For more information on fair valuation, please see "How To Buy Shares—How Are Shares Priced?"

Pursuant to the policy adopted by the Board of Trustees of the Trust, Goldman Sachs has developed criteria that it uses to identify trading activity that may be excessive. Excessive trading activity in the Fund is measured by the number of "round trip" transactions in a shareholder's account. A "round trip" includes a purchase or exchange into the Fund followed or preceded by a redemption or exchange out of the same Fund. If the Fund detects that a shareholder has completed two or more round trip transactions in a single Fund within a rolling 90-day period, the Fund may reject or restrict subsequent purchase or exchange orders by that shareholder permanently. In addition, the Fund may, in its sole discretion, permanently reject or restrict purchase or exchange orders by a shareholder if the Fund detects other trading activity that is deemed to be disruptive to the management of the Fund or otherwise harmful to the Fund. For purposes of these transaction surveillance procedures, the Fund may consider trading activity in multiple accounts under common ownership, control, or influence. A shareholder that has been restricted from participation in the Fund pursuant to this policy will be allowed to apply for re-entry after one year. A shareholder applying for re-entry must provide assurances acceptable to the Fund that the shareholder will not engage in excessive trading activities in the future.

Goldman Sachs may modify its surveillance procedures and criteria from time to time without prior notice regarding the detection of excessive trading or to address specific circumstances. Goldman Sachs will apply the criteria in a manner that, in Goldman Sachs' judgment, will be uniform.

Fund shares may be held through omnibus arrangements maintained by Intermediaries, such as broker-dealers, investment advisers and insurance companies. In addition, Fund shares may be held in omnibus Employee Benefit Plans, Eligible Fee-Based Programs and other group accounts. Omnibus accounts include multiple investors and such accounts typically provide the Fund with a net purchase or redemption request on any given day where the purchases and redemptions of Fund shares by the investors are netted against one another. The identity of individual investors whose purchase and redemption orders are aggregated are ordinarily not tracked by the Fund on a regular basis. A number of these Intermediaries may not have the capability or may not be willing to apply the Fund's market timing policies. While Goldman Sachs may monitor share turnover at the omnibus account level, the Fund's ability to monitor and detect market timing by shareholders in these omnibus accounts may be limited in certain circumstances, and certain of these Intermediaries may charge the Fund a fee for providing certain shareholder financial information requested as part of the Fund's surveillance process. The netting effect makes it more difficult to identify, locate and eliminate market timing activities. In addition, those investors who engage in market timing and other excessive trading activities may employ a variety of techniques to avoid detection. There can be no assurance that the Fund and Goldman Sachs will be able to identify all those who trade excessively or employ a market timing strategy, and curtail their trading in every instance. If necessary, the Trust may prohibit additional purchases of Fund shares by an Intermediary or by certain customers of the Intermediary. Intermediaries may also monitor their customers' trading activities in the Fund. The criteria used by Intermediaries to monitor for excessive trading may differ from the criteria used by the Fund. If an Intermediary fails to cooperate in the implementation or enforcement of the Trust's excessive trading policies, the Trust may take certain actions including terminating the relationship.

Taxation

As with any investment, you should consider how your investment in the Fund will be taxed. The tax information below is provided as general information. More tax information is available in the SAI. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Fund. Except as otherwise noted, the tax information provided assumes that you are a U.S. citizen or resident.

Unless your investment is through an Employee Benefit Plan or other tax-advantaged account, you should carefully consider the possible tax consequences of Fund distributions and the sale of your Fund shares.

DISTRIBUTIONS

The Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Fund are generally subject to federal income tax, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. For federal tax purposes, the Fund's distributions attributable to net investment income and short-term capital gains are taxable to you as ordinary income, while distributions of long-term capital gains are taxable to you as long-term capital gains, no matter how long you have owned your Fund shares.

Under current provisions of the Code, the maximum individual rate applicable to long-term capital gains is generally either 15% or 20%, depending on whether the individual's income exceeds certain threshold amounts. The preferential rate described above also applies to certain qualifying dividend income, but Fund distributions will not qualify for that favorable treatment and also will not qualify for the corporate dividends received deduction because the Funds will be earning interest income rather than dividend income.

The character and tax status of all distributions will be available to shareholders after the close of each calendar year.

An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds certain threshold amounts.

The Fund's transactions in derivatives (such as futures contracts and swaps) will be subject to special tax rules, the effect of which may be to accelerate income to a Fund, defer losses to a Fund, cause adjustments in the holding periods of a Fund's securities and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to you. A Fund's use of derivatives may result in the Fund realizing more short-term capital gains and ordinary income subject to tax at ordinary income tax rates than it would if it did not use derivatives.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December.

If you buy shares of each Fund before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as "buying into a dividend."

To the extent that Fund distributions are attributable to interest on certain federal obligations, they will in most cases be exempt from state and local income taxes.

The Funds may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Funds may deduct these taxes in computing their taxable income.

SALES AND EXCHANGES

Your sale of Fund shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Fund shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this capital gain or loss is long-term or short-term depending on whether your holding period exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of the Fund may be disallowed under "wash sale" rules to the extent the shares disposed of are replaced with other shares of that Fund within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Fund. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your Social Security Number or taxpayer identification number on your account application. By law, the Fund must withhold 24% of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the Internal Revenue Service (“IRS”) instructs the Fund to do so.

The Fund is required to report to you and the IRS annually on Form 1099-B not only the gross proceeds of Fund shares you sell or redeem but also, for shares purchased on or after January 1, 2012, their cost basis. **Cost basis will be calculated using the Fund’s default method of average cost, unless you instruct the Fund to use a different methodology.** If you would like to use the average cost method of calculation, no action is required. To elect an alternative method, you should contact Goldman Sachs Funds at the address or phone number on the back cover of the Prospectus. If your account is held with an Intermediary, contact your representative with respect to reporting of cost basis and available elections for your account.

You should carefully review the cost basis information provided by the Fund and make any additional basis, holding period or other adjustments that are required when reporting these amounts on your federal income tax returns.

Non-U.S. investors are generally subject to U.S. withholding tax and may be subject to estate tax with respect to their Fund shares. Non-U.S. investors generally are not subject to U.S. federal income tax withholding on distributions of certain qualified interest income and/or short-term capital gains that are reported by the Funds. It is expected that a Fund will generally report short-term gains, to the extent permitted, but the Funds do not intend to report any distributions attributable to qualified interest income. Therefore, any distributions of interest income will be subject to withholding when paid to non-U.S. investors.

The Fund is required to withhold U.S. tax (at a 30% rate) on payments of dividends made to certain non-U.S. entities that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. Shareholders may be requested to provide additional information to enable the Fund to determine whether withholding is required.

Appendix A

Additional Information on Fund Risks, Securities and Techniques

A. GENERAL FUND RISKS

The Fund will be subject to the risks associated with fixed income securities. These risks include, among others, interest rate risk, credit/default risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed income securities tends to decline. Credit/default risk involves the risk that an issuer or guarantor could default on its obligations, and a Fund will not recover its investment. Call risk and extension risk are normally present in adjustable rate mortgage loans (“ARMs”), mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities, such as securities backed by car loans.

A rising interest rate environment could cause the value of the Fund’s fixed income securities to decrease, and fixed income markets to experience increased volatility in addition to heightened levels of liquidity risk. Additionally, decreases in the value of fixed income securities could lead to increased shareholder redemptions, which could impair a Fund’s ability to achieve its investment objective. The risks associated with increasing interest rates are heightened given that interest rates are near historic lows, but may be expected to increase in the future with unpredictable effects on the markets and the Fund’s investments.

To the extent a Fund invests in pooled investment vehicles (including investment companies and ETFs) and partnerships, the Fund will be affected by the investment policies, practices and performance of such entities in direct proportion to the amount of assets the Fund invests therein.

To the extent a Fund’s net assets decrease or increase in the future due to price volatility or share redemption or purchase activity, the Fund’s expense ratio may correspondingly increase or decrease from the expense ratio disclosed in the Prospectus.

The Investment Adviser will not consider the portfolio turnover rate a limiting factor in making investment decisions for a Fund. A high rate of portfolio turnover involves correspondingly greater expenses which must be borne by a Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to certain shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of a Fund’s portfolio securities, excluding securities having a maturity at the date of purchase of one year or less.

A Fund described in the Prospectus may have a target duration range. A Fund’s duration approximates its price sensitivity to changes in interest rates. For example, suppose that interest rates in one day fall by one percent which, in turn, causes yields on every bond in the market to fall by the same amount. In this example, the price of a bond with a duration of three years may be expected to rise approximately three percent and the price of a bond with a five year duration may be expected to rise approximately five percent. The converse is also true. Suppose interest rates in one day rise by one percent which, in turn, causes yields on every bond in the market to rise by the same amount. In this second example, the price of a bond with a duration of three years may be expected to fall approximately three percent and the price of a bond with a five year duration may be expected to fall approximately five percent. The longer the duration of a bond, the more sensitive the bond’s price is to changes in interest rates. In computing portfolio duration, a Fund will estimate the duration of obligations that are subject to prepayment or redemption by the issuer, taking into account the influence of interest rates on prepayments and coupon flows. This method of computing duration is known as “option-adjusted” duration. A Fund will not be limited as to its maximum weighted average portfolio maturity or the maximum stated maturity with respect to individual securities unless otherwise noted. The Investment Adviser may use derivative instruments to manage the duration of a Fund’s investment portfolio. These derivative instruments may include futures contracts, options on futures contracts and swap transactions, as well as other types of derivatives, and can be used to shorten or lengthen the duration of a Fund.

Maturity measures the time until final payment is due; it takes no account of the pattern of a security’s cash flows over time. In calculating maturity, a Fund may determine the maturity of a variable or floating rate obligation according to its interest rate reset date, or the date principal can be recovered on demand, rather than the date of ultimate maturity. Similarly, to the extent that a fixed income obligation has a call, refunding or redemption provision, the date on which the instrument is expected to be called, refunded or redeemed may be considered to be its maturity date. There is no guarantee that the expected call, refund or redemption will occur, and a Fund’s average maturity may lengthen beyond the Investment Adviser’s expectations should the expected call, refund or redemption not occur.

The Fund's investments in derivative instruments, including financial futures contracts, options and swaps, can be significant. These transactions can result in sizeable realized and unrealized capital gains and losses relative to the gains and losses from the Fund's investments in bonds and other securities. Short-term and long-term realized capital gains distributions paid by the Fund are taxable to their shareholders.

Interest rates, fixed income securities prices, the prices of futures and other derivatives, and currency exchange rates can be volatile, and a variance in the degree of volatility or in the direction of the market from the Investment Adviser's expectations may produce significant losses in a Fund's investments in derivatives. In addition, a perfect correlation between a derivatives position and a fixed income security position is generally impossible to achieve. As a result, the Investment Adviser's use of derivatives may not be effective in fulfilling the Investment Adviser's investment strategies and may contribute to losses that would not have been incurred otherwise.

Financial futures contracts used by the Fund may include interest rate futures contracts. Further information is included in the Prospectus regarding futures contracts, swaps and other derivative instruments used by the Fund, including information on the risks presented by these instruments and other purposes for which they may be used by the Fund.

The Fund also has credit rating requirements for the securities they buy, which are applied at the time of purchase. For the purpose of determining compliance with any credit rating requirement, each Fund assigns a security, at the time of purchase, the highest rating by an NRSRO if the security is rated by more than one NRSRO. For this purpose, each Fund relies only on the ratings of the following NRSROs: S&P, Moody's and Fitch, Inc. Unrated securities may be purchased by a Fund if they are determined by the Investment Adviser to be of a credit quality consistent with the Fund's credit rating requirements.

A security satisfies a Fund's credit rating requirement regardless of its relative ranking (for example, plus or minus) within a designated major rating category (for example, BBB or Baa). If a security satisfies a Fund's credit rating requirement at the time of purchase and is subsequently downgraded below a minimum rating requirement, the Fund will not be required to dispose of such security. If a downgrade occurs, the Investment Adviser will consider what action, including the sale of such security, is in the best interests of a Fund and its shareholders.

As discussed below, the Fund may invest in credit default swaps, which are derivative investments.

The Fund may, from time to time, enter into arrangements with certain brokers or other counterparties that require the segregation of collateral. For operational, cost or other reasons, when setting up arrangements relating to the execution/clearing of trades, a Fund may choose to select a segregation model which may not be the most protective option available in the case of a default by a broker or counterparty.

The following sections provide further information on certain types of securities and investment techniques that may be used by the Fund, including their associated risks. Additional information is provided in the SAI, which is available upon request. Among other things, the SAI describes certain fundamental investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment objectives and all investment policies not specifically designated as fundamental are non-fundamental, and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs.

B. OTHER FUND RISKS

Credit/Default Risks. Debt securities purchased by the Fund may include U.S. Government Securities (including zero coupon bonds) and securities issued by foreign governments, domestic and foreign corporations, banks and other issuers. Some of these fixed income securities are described in the next section below. Further information is provided in the SAI.

The Fund also has credit rating requirements for the securities they buy, which are applied at the time of purchase. For this purpose, a Fund relies only on the ratings of the following NRSROs: S&P, Moody's and Fitch, Inc.

Unrated securities may be purchased by a Fund if they are determined by the Investment Adviser to be of a credit quality consistent with the Fund's credit rating requirements.

Debt securities rated A or higher by S&P or Moody's or having a comparable credit rating by another NRSRO are considered "high grade." Securities rated BBB- or Baa3 are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers' capacity to pay interest and repay principal. For the purpose of determining compliance with any credit rating requirement, the Fund assigns a security, at the time of purchase, the highest rating by an NRSRO if the security is rated by more than one NRSRO. Therefore, a security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the Investment Adviser to be of comparable credit quality.

The Fund may invest in fixed income securities rated BB+ or Ba1 or below (or comparable unrated securities) which are commonly referred to as “junk bonds.” Junk bonds are considered speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in a Fund’s portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Risks of Derivative Investments. The Fund may invest in derivative instruments including some or all of the following: options, futures, options on futures, swaps, structured securities and other derivatives relating to foreign currency transactions. Derivatives may be used for both hedging and nonhedging purposes (that is, to seek to increase total return), although suitable derivative instruments may not always be available to the Investment Adviser for these purposes. Losses from derivative instruments can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, the failure of the counterparty to perform its contractual obligations, or the risks related to leverage factors associated with such transactions. Derivatives are also subject to risks arising from margin requirements, which include the risk that a Fund will be required to pay additional margin or set aside additional collateral to maintain open derivative positions and the risk of loss by a Fund of margin deposits in the event of the bankruptcy or other similar insolvency with respect to a broker or counterparty with whom a Fund has an open derivative position. Losses may also arise if the Fund receives cash collateral under the transactions and some or all of that collateral is invested in the market. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and a Fund may be responsible for any loss that might result from its investment of the counterparty’s cash collateral. If cash collateral is not invested, a Fund may be exposed to additional risk of loss in the event of the insolvency of its custodian holding such collateral. The use of these management techniques also involves the risk of loss if the Investment Adviser is incorrect in its expectation of the timing or level of fluctuations in securities prices, interest rates, currency prices or other variables. Derivative instruments may be harder to value, subject to greater volatility and more likely subject to changes in tax treatment than other investments. For these reasons, the Investment Adviser’s attempts to hedge portfolio risks through the use of derivative instruments may not be successful, and the Investment Adviser may choose not to hedge portfolio risks. Using derivatives for nonhedging purposes presents greater risk of loss than derivatives used for hedging purposes.

Derivative mortgage-backed securities (such as principal-only (“POs”), interest-only (“IOs”) or inverse floating rate securities) are particularly exposed to call and extension risks. Small changes in mortgage prepayments can significantly impact the cash flow and the market value of these securities. In general, the risk of faster than anticipated prepayments adversely affects IOs, super floaters and premium priced mortgage-backed securities. The risk of slower than anticipated prepayments generally adversely affects POs, floating-rate securities subject to interest rate caps, support tranches and discount priced mortgage-backed securities. In addition, particular derivative securities may be leveraged such that their exposure (i.e., price sensitivity) to interest rate and/or prepayment risk is magnified.

Some floating-rate derivative debt securities can present more complex types of derivative and interest rate risks. For example, range floaters are subject to the risk that the coupon will be reduced below market rates if a designated interest rate floats outside of a specified interest rate band or collar. Dual index or yield curve floaters are subject to lower prices in the event of an unfavorable change in the spread between two designated interest rates.

Risks of Foreign Investments. The Fund may make foreign investments. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (e.g., currency blockage). A decline in the exchange rate of the currency (i.e., weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which a Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to shareholders or converted to U.S. dollars, the Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Certain foreign markets may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, organizations, entities and/or individuals, changes in international trading patterns, trade barriers, and other protectionist or retaliatory measures. International trade barriers or economic sanctions against foreign countries, organizations, entities and/or individuals may adversely affect a Fund’s foreign holdings or exposures. The type and severity of sanctions and other similar measures, including counter sanctions and other retaliatory actions, that may be imposed could vary broadly in scope, and their impact is impossible to predict. These types of measures may include, but are not limited to, banning a sanctioned country from global payment systems that facilitate cross-border payments, restricting the settlement of securities transactions by certain investors, and freezing the assets of particular countries, entities, or persons. The imposition of sanctions and other similar measures could, among other things, cause a decline in the value and/or liquidity of securities issued by the sanctioned country or companies located in or economically tied to the sanctioned country, downgrades in the credit ratings of the sanctioned country or companies located in or economically tied to the sanctioned country,

devaluation of the sanctioned country's currency, and increased market volatility and disruption in the sanctioned country and throughout the world. Sanctions and other similar measures could limit or prevent the Fund from buying and selling securities (in the sanctioned country and other markets), significantly delay or prevent the settlement of securities transactions, and significantly impact the Fund's liquidity and performance.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States, and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Certain foreign investments may become less liquid in response to social, political or market developments or adverse investor perceptions, or become illiquid after purchase by a Fund, particularly during periods of market turmoil. Certain foreign investments may become illiquid when, for instance, there are few, if any, interested buyers or sellers or when dealers are unwilling to make a market for certain securities. When a Fund holds illiquid investments, its portfolio may be harder to value, especially in changing markets.

If a Fund focuses its investments in one or a few countries and currencies, the Fund may be subjected to greater risks than if a Fund's assets were not geographically focused.

Risks of Sovereign Debt. Investment in sovereign debt obligations by the Enhanced Income Fund, Inflation Protected Securities Fund and Short Duration Bond Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due in accordance with the terms of such debt, and a Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn a Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Risks of Illiquid Investments. The Fund may not acquire any "illiquid investment" if, immediately after the acquisition, the Fund would have invested more than 15% of its net assets in illiquid investments that are assets. An "illiquid investment" is an investment that a Fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. In determining whether an investment is an illiquid investment, the Investment Adviser will take into account actual or estimated daily transaction volume of an investment, group of related investments or asset class and other relevant market, trading, and investment-specific considerations. In addition, in determining the liquidity of an investment, the Investment Adviser must determine whether trading varying portions of a position in a particular portfolio investment or asset class, in sizes that a Fund would reasonably anticipate trading, is reasonably expected to significantly affect its liquidity, and if so, the Fund must take this determination into account when classifying the liquidity of that investment or asset class.

Investments purchased by a Fund that are liquid at the time of purchase may subsequently become illiquid. If one or more investments in a Fund's portfolio become illiquid, the Fund may exceed the 15% limitation in illiquid investments. In the event that changes in the portfolio or other external events cause a Fund to exceed this limit, the Fund must take steps to bring its illiquid investments that are assets to or below 15% of its net assets within a reasonable period of time. This requirement would not force a Fund to liquidate any portfolio instrument where the Fund would suffer a loss on the sale of that instrument.

In cases where no clear indication of the value of a Fund's portfolio instruments is available, the portfolio instruments will be valued at their fair value according to the valuation procedures approved by the Board of Trustees. These cases include, among others, situations where a security or other asset or liability does not have a price source, or the secondary markets on which an investment has previously been traded are no longer viable, due to its lack of liquidity. For more information on fair valuation, please see Shareholder Guide—"How To Buy Shares—How Are Shares Priced?"

Risks of Emerging Countries. The Fund may invest in securities of issuers located in, or otherwise economically tied to, emerging countries. The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in Africa, Asia, the Middle East, Eastern and Central Europe, and Central and South America. A Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of a Fund, the Investment Adviser, its affiliates and their respective clients and other service providers. A Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by a Fund. The repatriation of investment income, capital or the proceeds of securities sales from certain emerging countries is subject to restrictions such as the need for governmental consents, which may make it difficult for a Fund to invest in such emerging countries. A Fund could be adversely affected by delays in, or a refusal to grant, any required governmental approval for such repatriation. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), a Fund may invest in such countries through other investment funds in such countries.

Emerging market countries may have more or less government regulation and generally do not impose as extensive and frequent accounting, auditing, financial and other reporting requirements as the securities markets of more developed countries. The degree of cooperation between issuers in emerging and frontier market countries with foreign and U.S. financial regulators may vary significantly. Accordingly, regulators may not have sufficient access to audit and oversee issuers, and there could be less information available about issuers in certain emerging market countries. As a result, the Investment Adviser's ability to evaluate local companies or their potential impact on the Fund's performance could be inhibited.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of those emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not occur in other countries.

A Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return to a Fund from an investment in issuers in such countries.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve a Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for a Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by a Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make a Fund's investments in such countries less liquid and more volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). A Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and then only at a substantial drop in price. Investments in emerging countries may be more difficult to value precisely because of the characteristics discussed above and lower trading volumes.

A Fund's use of foreign currency management techniques in emerging countries may be limited. The Investment Adviser anticipates that a significant portion of the Fund's currency exposure in emerging countries may not be covered by those techniques.

Foreign Custody Risk. A Fund that invests in foreign securities may hold such securities and cash with foreign banks, agents, and securities depositories appointed by the Fund's custodian (each a "Foreign Custodian"). Some Foreign Custodians may be recently organized or new to the foreign custody business. In some countries, Foreign Custodians may be subject to little or no regulatory oversight over or independent evaluation of their operations. Further, the laws of certain countries may place limitations on a Fund's ability to recover its assets if a Foreign Custodian enters bankruptcy. Investments in emerging markets may be subject to even greater custody risks than investments in more developed markets. Custody services in emerging market countries are very often undeveloped and may be considerably less well regulated than in more developed countries, and thus may not afford the same level of investor protection as would apply in developed countries.

Risks of Structured Investment Vehicles. Structured Investment Vehicles ("SIVs") are legal entities that are sponsored by banks, broker-dealers or other financial firms specifically created for the purpose of issuing particular securities or instruments. SIVs are often leveraged and securities issued by SIVs may have differing credit preferences. Investments in SIVs present counterparty risks, although they may be subject to a guarantee or other financial support by the sponsoring entity. Investments in SIVs may be more volatile, less liquid and more difficult to price accurately than other types of investments.

Temporary Investment Risks. Each Fund may, for temporary defensive purposes (and to the extent that it is permitted to invest in the following), invest up to 100% of its total assets in:

- U.S. Government Securities
- Commercial paper rated at least A-2 by S&P, P-2 by Moody's or having a comparable credit rating by another NRSRO (or, if unrated, determined by the Investment Adviser to be of comparable credit quality)
- Certificates of deposit
- Bankers' acceptances
- Repurchase agreements
- Non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year
- ETFs
- Other investment companies
- Cash items

When a Fund's assets are invested in such instruments, the Fund may not be achieving its investment objective.

Risks of Short Selling.

The U.S. Mortgages Fund may engage in short selling. In these transactions, the Fund sells a security it does not own in anticipation of a decline in the market value of the security, then must borrow the security to make delivery to the buyer. A Fund is obligated to replace the security borrowed by purchasing it at the market price at the time of replacement. The price at such time may be more or less than the price at which the security was sold by the Fund, which may result in a loss or gain, respectively. Unlike purchasing a security, where potential losses are limited to the purchase price and there is no upside limit on potential gain, short sales involve no cap on maximum losses, while gains are limited to the price of the security at the time of the short sale. A Fund may, during the term of any short sale, withdraw the cash proceeds of such short sale and use these cash proceeds to purchase additional securities or for any other Fund purposes. Because cash proceeds are Fund assets which are typically used to satisfy the collateral requirements for the short sale, the reinvestment of these cash proceeds may require the Fund to post as collateral other securities that it owns. If the Fund reinvests the cash proceeds, the Fund might be required to post an amount greater than its net assets (but less than its total assets) as collateral. For these or other reasons, the Fund might be required to liquidate long and short position sat times or in amounts that may be disadvantageous to the Fund. Each Fund may make short sales against the box, in which the Fund enters into a short sale of a security which it owns or has the right to obtain at no additional cost. The SEC and financial industry regulatory authorities in other

countries have imposed temporary prohibitions and restrictions on certain types of short sale transactions. These prohibitions and restrictions, or the imposition of other regulatory requirements on short selling in the future, could inhibit the ability of the Investment Adviser to sell securities short on behalf of the Fund.

C. FUND SECURITIES AND TECHNIQUES

This section provides further information on certain types of securities and investment techniques that may be used by the Fund, including its associated risks.

The Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies. Further information is provided in the SAI, which is available upon request.

U.S. Government Securities. The Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (i) the full faith and credit of the U.S. Treasury; (ii) the right of the issuer to borrow from the U.S. Treasury; (iii) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (iv) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components are traded independently. U.S. Government Securities may also include Treasury inflation-protected securities whose principal value is periodically adjusted according to the rate of inflation.

U.S. Treasury obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program ("STRIPS").

U.S. Government Securities are deemed to include (i) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (ii) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid.

U.S. Treasury obligations have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will be able or willing to repay the principal or interest rate when due, or provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises that issue U.S. Treasury obligations if it is not obligated to do so by law.

Custodial Receipts and Trust Certificates. The Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities, Municipal Securities or other types of securities in which a Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. The Fund may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. Mortgage-backed securities can be backed by either fixed rate mortgage loans or adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates. The value of these securities may also fluctuate in response to the market's perception of the creditworthiness of the issuers. Early repayment of principal on mortgage- or asset-backed securities may expose a Fund to the risk of earning a lower rate of return upon reinvestment of principal.

The Fund may invest in privately-issued mortgage pass-through securities that represent interests in pools of mortgage loans that are issued by trusts formed by originators of and institutional investors in mortgage loans (or represent interests in custodial arrangements administered by such institutions). These originators and institutions include commercial banks, savings and loans associations, credit unions, savings banks, mortgage bankers, insurance companies, investment banks or special purpose subsidiaries of the foregoing. The pools underlying privately-issued mortgage pass-through securities consist of mortgage loans secured by mortgages or deeds of trust creating a first lien on commercial, residential, residential multi-family and mixed residential/commercial properties. These mortgage-backed securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities.

Privately-issued mortgage pass-through securities generally offer a higher yield than similar securities issued by a government entity because of the absence of any direct or indirect government or agency payment guarantees. However, timely payment of interest and principal on mortgage loans in these pools may be supported by various other forms of insurance or guarantees, including individual loan, pool and hazard insurance, subordination and letters of credit. Such insurance and guarantees may be issued by private insurers, banks and mortgage poolers. There is no assurance that private guarantors or insurers, if any, will meet their obligations.

Mortgage-backed securities without insurance or guarantees may also be purchased by a Fund if they have the required rating from an NRSRO. Some mortgage-backed securities issued by private organizations may not be readily marketable, may be more difficult to value accurately and may be more volatile than similar securities issued by a government entity.

Mortgage-backed securities may include multiple class securities, including collateralized mortgage obligations (“CMOs”) and Real Estate Mortgage Investment Conduit (“REMIC”) pass-through or participation certificates. A REMIC is a CMO that qualifies for special tax treatment under the Code and invests in certain mortgages principally secured by interests in real property and other permitted investments. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other mortgage-backed securities. CMOs are issued in multiple classes each with a specified fixed or floating interest rate and a final scheduled distribution date. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full.

Sometimes, however, CMO classes are “parallel pay,” *i.e.*, payments of principal are made to two or more classes concurrently. In some cases, CMOs may have the characteristics of a stripped mortgage-backed security whose price can be highly volatile. CMOs may exhibit more or less price volatility and interest rate risk than other types of mortgage-backed securities, and under certain interest rate and payment scenarios, the Fund may fail to recoup fully its investment in certain of these securities regardless of their credit quality.

To the extent a Fund concentrates its investments in pools of mortgage-backed securities sponsored by the same sponsor or serviced by the same servicer, it may be subject to additional risks. Servicers of mortgage-related pools collect payments on the underlying mortgage assets for pass-through to the pool on a periodic basis. Upon insolvency of the servicer, the pool may be at risk with respect to collections received by the servicer but not yet delivered to the pool.

Mortgage-backed securities also include stripped mortgage-backed securities (“SMBS”), which are derivative multiple class mortgage-backed securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other mortgage-backed securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped. Throughout 2008, the market for mortgage-backed securities began experiencing substantially, often dramatically, lower valuations and greatly reduced liquidity. Markets for other asset-backed securities have also been affected. These instruments are increasingly subject to liquidity constraints, price volatility, credit downgrades and unexpected increases in default rates and, therefore, may be more difficult to value and more difficult to dispose of than previously. These events may have an adverse effect on the Fund to the extent it invests in mortgage-backed or other fixed income securities or instruments affected by the volatility in the fixed income markets.

Asset-Backed Securities. The Fund may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities may also include home equity line of credit loans and other second-lien mortgages. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, a Fund’s ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by mortgage-backed securities. This is because asset-backed securities generally do not have the benefit of a security interest in collateral that is comparable to mortgage assets. Some asset-backed securities have only a subordinated claim or security interest in collateral. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund’s recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed. The value of some asset-backed securities may be particularly sensitive to changes in the prevailing interest rates. There is no guarantee that private guarantors, or insurers of an asset-backed security, if any, will meet their obligations. Asset-backed securities may also be subject to increased volatility and may become illiquid and more difficult to value even when there is no default or threat of default due to the market’s perception of the creditworthiness of the issuers and market conditions impacting asset-backed securities more generally.

Municipal Securities. The Fund may invest in securities and instruments issued by state and local government issuers. Municipal Securities in which a Fund may invest consist of bonds, notes, commercial paper and other instruments (including participation interests in such securities) issued by or on behalf of the states, territories and possessions of the United States (including the District of Columbia) and their political subdivisions, agencies or instrumentalities.

Municipal Securities include both “general” obligation and “revenue” bonds and may be issued to obtain funds for various purposes. General obligations are secured by the issuer’s pledge of its full faith, credit and taxing power. Revenue obligations are payable only from the revenues derived from a particular facility or class of facilities.

Municipal Securities are often issued to obtain funds for various public purposes, including the construction of a wide range of public facilities such as bridges, highways, housing, hospitals, mass transportation, schools, streets and water and sewer works. Other purposes for which Municipal Securities may be issued include refunding outstanding obligations, obtaining funds for general operating expenses, and obtaining funds to lend to other public institutions and facilities. Municipal Securities in which the Fund may invest include private activity bonds, pre-refunded municipal securities and auction rate securities. Dividends paid by the Fund based on investments in Municipal Securities will be taxable.

The obligations of the issuer to pay the principal of and interest on a Municipal Security are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Act, and laws, if any, that may be enacted by Congress or state legislatures extending the time for payment of principal or interest or imposing other constraints upon the enforcement of such obligations. There is also the possibility that, as a result of litigation or other conditions, the power or ability of the issuer to pay when due the principal of or interest on a Municipal Security may be materially affected.

In addition, Municipal Securities include municipal leases, certificates of participation and “moral obligation” bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment purchase agreements. Moral obligation bonds are supported by a moral commitment but not a legal obligation of a state or local government. Municipal leases, certificates of participation and moral obligation bonds frequently involve special risks not normally associated with general obligation or revenue bonds. In particular, these instruments permit governmental issuers to acquire property and equipment without meeting constitutional and statutory requirements for the issuance of debt. If, however, the governmental issuer does not periodically appropriate money to enable it to meet its payment obligations under these instruments, it cannot be legally compelled to do so. If a default occurs, it is likely that a Fund would be unable to obtain another acceptable source of payment. Some municipal leases, certificates of participation and moral obligation bonds may be illiquid.

Municipal Securities may also be in the form of a tender option bond, which is a Municipal Security (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued with the agreement of a third party, such as a bank, broker-dealer or other financial institution, which grants the security holders the option, at periodic intervals, to tender their securities to the institution. After payment of a fee to the financial institution that provides this option, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution may not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund’s duration. Certain tender option bonds may be illiquid.

Municipal Securities may be backed by letters of credit or other forms of credit enhancement issued by domestic or foreign banks or by other financial institutions. The deterioration of the credit quality of these banks and financial institutions could, therefore, cause a loss to a Fund that invests in such Municipal Securities. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and are generally not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

The Fund may invest in Municipal Securities issued by municipalities, including U.S. territories, commonwealths and possessions, that may be, or may become, subject to significant financial difficulties. Factors contributing to such difficulties may include: lower property tax collections as a result of lower home values, lower sales tax revenue as a result of reduced consumer spending, lower income tax revenue as a result of higher unemployment rates, and budgetary constraints of local, state and federal governments upon which issuers of municipal securities may be relying for funding. Such securities may be considered below investment grade or may be subject to future credit downgrades due to concerns over potential default, insolvency or bankruptcy on the part of their issuers or any credit support provider. During the recent economic downturn, several municipalities have, in fact, filed for bankruptcy protection or have indicated that they may seek bankruptcy protection in the future. A credit downgrade or other adverse news about an issuer or any credit support provider could impact the market value and liquidity of the securities and consequently could negatively affect the performance of a Fund that holds such securities.

Brady Bonds and Similar Instruments. The Fund may invest in debt obligations commonly referred to as “Brady Bonds.” Brady Bonds are created through the exchange of existing commercial bank loans to foreign borrowers for new obligations in connection with debt restructurings under a plan introduced by former U.S. Secretary of the Treasury, Nicholas F. Brady (the “Brady Plan”).

Brady Bonds involve various risk factors including the history of defaults with respect to commercial bank loans by public and private entities of countries issuing Brady Bonds. There can be no assurance that Brady Bonds in which a Fund may invest will not be subject to restructuring arrangements or to requests for new credit, which may cause the Fund to suffer a loss of interest or principal on its holdings.

In addition, the Fund may invest in other interests issued by entities organized and operated for the purpose of restructuring the investment characteristics of instruments issued by emerging country issuers. These types of restructuring involve the deposit with or purchase by an entity of specific instruments and the issuance by that entity of one or more classes of securities backed by, or representing interests in, the underlying instruments. Certain issuers of such structured securities may be deemed to be “investment companies” as defined in the Investment Company Act. As a result, a Fund’s investment in such securities may be limited by certain investment restrictions contained in the Investment Company Act.

Corporate Debt Obligations, Trust Preferred Securities and Convertible Securities. The Fund may invest in corporate debt obligations, trust preferred securities and convertible securities (except that the U.S. Mortgages Fund may not invest in convertible securities). Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of corporations to pay interest and repay principal. A trust preferred security is a long dated bond (for example, 30 years) with preferred features. The preferred features are that payment of interest can be deferred for a specified period without initiating a default event. The securities are generally senior in claim to standard preferred stock but junior to other bondholders. The Fund may also invest in other short-term obligations issued or guaranteed by U.S. corporations, non-U.S. corporations or other entities.

Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. Convertible securities have both equity and fixed income risk characteristics. Like all fixed income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Bank Obligations. The Fund may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits, bankers’ acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry.

Structured Securities and Inverse Floaters. The Fund may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, securities, interest rates, commodities, indices or other financial indicators (the “Reference”) or the relative change in two or more References. Investments in structured securities may provide exposure to certain securities or markets in situations where regulatory or other restrictions prevent direct investments in such issuers or markets.

The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference, effectively leveraging a Fund’s investments so that small changes in the value of the reference may result in disproportionate gains or losses to the Fund. Consequently, structured securities may present a greater degree of market risk than many types of securities and may be more volatile, less liquid and more difficult to price accurately than less complex securities. Structured securities are also subject to the risk that the issuer of the structured securities may fail to perform its contractual obligations. Certain issuers of structured products may be deemed to be investment companies as defined in the Investment Company Act. As a result, a Fund’s investments in structured securities may be subject to the limits applicable to investments in other investment companies.

Structured securities may also include credit linked notes. Credit linked notes are securities with embedded credit default swaps. An investor holding a credit linked note generally receives a fixed or floating coupon and the note's par value upon maturity, unless the referred credit defaults or declares bankruptcy, in which case the investor receives the amount recovered. In effect, investors holding credit linked notes receive a higher yield in exchange for assuming the risk of a specified credit event.

Structured securities may also include inverse floating rate debt securities ("inverse floaters"). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which the inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Floating and Variable Rate Obligations. The Fund may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable both of which may be issued by domestic banks or foreign banks. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institutions.

Floating and variable rate obligations may be transferable among financial institutions, but may not have the liquidity of conventional debt securities and are often subject to legal or contractual restrictions on resale. Floating and variable rate obligations are not currently listed on any securities exchange or automatic quotation system. As a result, no active market may exist for some floating and variable rate obligations. To the extent a secondary market exists for other floating and variable rate obligations, such market may be subject to irregular trading activity, wide bid/ask spreads, and extended trade settlement periods. The lack of a highly liquid secondary market for floating and variable rate obligations may have an adverse effect on the value of such obligations and may make it more difficult to value the obligations for purposes of calculating their respective net asset value.

For floating and variable rate obligations, there may be a lag between an actual change in the underlying interest rate benchmark and the reset time for an interest payment of such an obligation, which could harm or benefit the Fund, depending on the interest rate environment or other circumstances. In a rising interest rate environment, for example, a floating or variable rate obligation that does not reset immediately would prevent the Fund from taking full advantage of the rising interest rates in a timely manner. However, in a declining interest rate environment, the Fund may benefit from a lag due to an obligation's interest rate payment not being immediately impacted by a decline in interest rates.

Certain floating and variable rate obligations have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the "reference rate"), such as SOFR, Term SOFR or another rate determined using SOFR. Such a floor protects the Fund from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the obligation, and the Fund may not benefit from increasing interest rates for a significant amount of time.

Zero Coupon, Deferred Interest, Pay-In-Kind and Capital Appreciation Bonds. The Fund may invest in zero coupon bonds, deferred interest, pay-in-kind and capital appreciation bonds. These bonds are issued at a discount from their face value because interest payments are typically postponed until maturity. Pay-in-kind securities are securities that have interest payable by the delivery of additional securities. The market prices of these securities generally are more volatile than the market prices of interest-bearing securities and are likely to respond to a greater degree to changes in interest rates than interest-bearing securities having similar maturities and credit quality.

Mortgage Dollar Rolls. The Fund may enter into mortgage dollar rolls. A mortgage dollar roll involves the sale by a Fund of securities for delivery in the current month. The Fund simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Fund loses the right to receive principal and interest paid on the securities sold. However, the Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish the Fund's performance.

Successful use of mortgage dollar rolls depends upon the Investment Adviser's ability to predict correctly interest rates and mortgage prepayments. If the Investment Adviser is incorrect in its prediction, a Fund may experience a loss. The Fund does not currently intend to enter into mortgage dollar rolls for financing and do not treat them as borrowings.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the

option period. The Fund may write (sell) call and put options and purchase put and call options on any securities and other instruments in which the Fund may invest or any index consisting of securities or other instruments in which it may invest. The Fund may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which presents additional risk). The successful use of options depends in part on the ability of the Investment Adviser to anticipate future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If the Investment Adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in a Fund's investment portfolio, the Fund may incur losses that it would not otherwise incur. The use of options can also increase a Fund's transaction costs. Options written or purchased by the Fund may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Yield Curve Options. The Fund may enter into options on the yield "spread" or differential between two securities. Such transactions are referred to as "yield curve" options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities, rather than the prices of the individual securities, and is settled through cash payments. Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Futures Contracts and Options and Swaps on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A swap on a futures contract provides an investor with the ability to gain economic exposure to a particular futures market. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. The Fund may engage in futures transactions on U.S. exchanges.

The Fund may, to the extent consistent with its investment policies, purchase and sell futures contracts, purchase and write call and put options on futures contracts, and enter into swaps on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices, or currency exchange rates, or to otherwise manage its term structure, sector selection and duration in accordance with its investment objective and policies. The Fund may also enter into closing purchase and sale transactions with respect to such contracts and options.

Futures contracts and related options and swaps present the following risks:

- While a Fund may benefit from the use of futures and options and swaps on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in poorer overall performance than if the Fund had not entered into any futures contracts, options transactions or swaps.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection may not be obtained and a Fund may be exposed to additional risk of loss.
- The loss incurred by a Fund in entering into futures contracts and in writing call options and entering into swaps on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of a Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to a Fund.
- Futures contracts and options and swaps on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

When-Issued Securities and Forward Commitments. The Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Foreign Currency Transactions. The Fund may, to the extent consistent with their investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract.

The Fund may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. The Fund may also enter into such transactions to seek to increase total return, which presents additional risk.

Some Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. A Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the Investment Adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (e.g., the Investment Adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

The Fund may, from time to time, engage in non-deliverable forward transactions to manage currency risk or to gain exposure to a currency without purchasing securities denominated in that currency. A non-deliverable forward is a transaction that represents an agreement between a Fund and a counterparty (usually a commercial bank) to pay the other party the amount that it would cost based on current market rates as of the termination date to buy or sell a specified (notional) amount of a particular currency at an agreed upon foreign exchange rate on an agreed upon future date. If the counterparty defaults, a Fund will have contractual remedies pursuant to the agreement related to the transaction, but the Fund may be delayed or prevented from obtaining payments owed to it pursuant to non-deliverable forward transactions. Such non-deliverable forward transactions will be settled in cash.

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, a Fund's NAV to fluctuate (when a Fund's NAV fluctuates, the value of your shares may go up or down). Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

Certain forward foreign currency exchange contracts and other currency transactions are not exchange traded or cleared. The market in such forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive a Fund of unrealized profits, transaction costs or the benefits of a currency hedge or could force the Fund to cover its purchase or sale commitments, if any, at the current market price.

A Fund is not required to post cash collateral with its counterparties in certain foreign currency transactions. Accordingly, a Fund may remain more fully invested (and more of the Fund's assets may be subject to investment and market risk) than if it were required to post cash collateral with its counterparties (which is the case with certain transactions). Where a Fund's counterparties are not required to post cash collateral with the Fund, the Fund will be subject to additional counterparty risk.

Repurchase Agreements. Repurchase agreements involve the purchase of securities subject to the seller's agreement to repurchase them at a mutually agreed upon date and price. The Fund may enter into repurchase agreements with counterparties approved by the Investment Adviser pursuant to procedures approved by the Board of Trustees that furnish collateral at least equal in value or market price to the amount of their repurchase obligation. The collateral may consist of any type of security in which a Fund is eligible to invest or, if a Fund is subject to minimum credit quality requirements, any type of security, including non-investment grade securities, provided the repurchase agreement counterparty satisfies these minimum credit quality requirements. Repurchase agreements involving obligations other than U.S. Government Securities may be subject to additional risks.

If the other party or "seller" defaults, a Fund might suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's costs associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy of the seller, a Fund could suffer additional losses if a court determines that the Fund's interest in the collateral is not enforceable.

The Fund, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Borrowings and Reverse Repurchase Agreements. The Fund can borrow money from banks and other financial institutions, and may enter into reverse repurchase agreements in amounts not exceeding one-third of a Fund's total assets (including the amount borrowed or received). Borrowings and reverse repurchase agreements involve the use of leverage and subject a Fund to the risks associated with leverage, including exposure to potential gains and losses in excess of the amount invested.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps, Options on Swaps and Interest Rate Caps, Floors and Collars. The Fund may enter into some or all of the following swap transactions and option agreements, including interest rate swaps, mortgage swaps, credit swaps, currency swaps, total return swaps, options on swaps and interest rate caps, floors and collars. Interest rate swaps involve the exchange by a Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps (also referred to as credit default swaps) involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security or pool of securities. Credit swaps give one party to a transaction (the buyer of the credit swap) the right to dispose of or acquire an asset (or group of assets or exposure to the performance of an index), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give a party the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be based on an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the party may also be required to pay the dollar value of that decline to the counterparty.

The Fund may also purchase and write (sell) options contracts on swaps, commonly referred to as swaptions. A swaption is an option to enter into a swap agreement. Like other types of options, the buyer of a swaption pays a non-refundable premium for the option and obtains the right, but not the obligation, to enter into an underlying swap or to modify the terms of an existing swap on agreed-upon terms. The seller of a swaption, in exchange for the premium, becomes obligated (if the option is exercised) to enter into or modify an underlying swap on agreed-upon terms, which generally entails a greater risk of loss than the Fund incurs in buying a swaption. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

The Fund may enter into the transactions described above for hedging purposes or to seek to increase total return. As an example, when a Fund is the buyer of a credit default swap (commonly known as buying protection), it may make periodic payments to the seller of the credit default swap to obtain protection against a credit default on a specified underlying asset (or group of assets). If a default occurs, the seller of a credit default swap may be required to pay the Fund the notional amount of the credit default swap on a specified security (or group of securities). On the other hand, when a Fund is a seller of a credit default swap (commonly known as selling protection), in addition to the credit exposure the Fund has on the other assets held in its portfolio, the Fund is also subject to the credit exposure on the notional amount of the swap since, in the event of a credit default, the Fund may be required to pay the notional amount of the credit default swap on a specified security (or group of securities) to the buyer of the credit default swap. A Fund will be the seller of a credit default swap only when the credit of the underlying asset is deemed by the Investment Adviser to meet the Fund's minimum credit criteria at the time the swap is first entered into.

When a Fund writes (sells) credit swaps on individual securities or instruments, the Fund must identify on its books liquid assets equal to the full notional amount of the swaps while the positions are open.

The use of interest rate, mortgage, credit, currency and total return swaps, options on swaps, and interest rate caps, floors and collars, is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If the Investment Adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, or in its evaluation of the creditworthiness of swap counterparties and the issuers of the underlying assets, the investment performance of a Fund would be less favorable than it would have been if these investment techniques were not used.

Currently, certain standardized swap transactions are subject to mandatory central clearing and exchange trading. Although central clearing and exchange trading is expected to decrease counterparty risk and increase liquidity compared to bilaterally negotiated swaps, central clearing and exchange trading does not eliminate counterparty risk or illiquidity risk entirely. Depending on the size of a Fund and other factors, the margin required under the rules of a clearinghouse and by a clearing member may be in excess of the collateral required to be posted by the Fund to support its obligations under a similar bilateral, uncleared swap. However, certain applicable regulators have adopted rules imposing certain margin requirements, including minimums, on uncleared swaps which may result in the Fund and its counterparties posting higher amounts for uncleared swaps.

Other Investment Companies. The Fund may invest in securities of other investment companies, including ETFs and money market funds, subject to statutory limitations prescribed by the Investment Company Act or rules, regulations or exemptive relief thereunder. These statutory limitations include in certain circumstances a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of total assets in securities of all investment companies.

Subject to applicable law and/or pursuant to an exemptive order obtained from the SEC or under an exemptive rule adopted by the SEC, a Fund may invest in certain other investment companies (including ETFs and money market funds) and business development companies beyond the statutory limits described above or otherwise provided that certain conditions are met. Some of those investment companies may be funds for which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Additionally, to the extent that the Fund serves as an "acquired fund" to another Goldman Sachs Fund or unaffiliated investment company, the Fund's ability to invest in other investment companies and private funds may be limited and, under these circumstances, the Fund's investments in other investment companies and private funds will be consistent with applicable law and/or exemptive rules adopted by or exemptive orders obtained from the SEC. For example, to the extent the Fund serves as an acquired fund in a fund of funds arrangement in reliance on Rule 12d1-4 under the Investment Company Act, the Fund would be prohibited from purchasing or otherwise acquiring the securities of an investment company or private fund if, after such purchase or acquisition, the aggregate value of the Fund's investments in such investment companies and private funds would exceed 10% of the value of the Fund's total assets, subject to limited exceptions (including for investments in money market funds).

The use of ETFs is generally intended to help a Fund match the total return of the particular market segments or indices represented by those ETFs, although that may not be the result. Most ETFs are passively managed investment companies whose shares are purchased and sold on a securities exchange. An ETF generally represents a portfolio of securities designed to track a particular market segment or index. An investment in an ETF generally presents the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies. In addition, an ETF may fail to accurately track the market segment or index that underlies its investment objective. The price of an ETF can fluctuate, and a Fund could lose money investing in an ETF. Moreover, ETFs are subject to the following risks that do not apply to conventional funds: (i) the market price of the ETF's shares may trade at a premium or a discount to their NAV; (ii) an active trading market for an ETF's shares may not develop or be maintained; and (iii) there is no assurance that the requirements of the exchange necessary to maintain the listing of an ETF will continue to be met or remain unchanged.

The Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies, in addition to the fees and expenses regularly borne by the Fund. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund.

Non-Investment Grade Fixed Income Securities. Non-investment grade fixed income securities and unrated securities of comparable credit quality (commonly known as "junk bonds") are considered speculative. In some cases, these obligations may be highly speculative and have poor prospects for reaching investment grade standing. Non-investment grade fixed income securities are subject to the increased risk of an issuer's inability to meet principal and interest obligations. These securities, also referred to as high yield securities, may be subject to greater price volatility due to such factors as specific issuer developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less liquidity.

Non-investment grade fixed income securities are often issued in connection with a corporate reorganization or restructuring or as part of a merger, acquisition, takeover or similar event. They are also issued by less established companies seeking to expand. Such issuers are often highly leveraged and generally less able than more established or less leveraged entities to make scheduled payments of principal and interest in the event of adverse developments or business conditions. Non-investment grade fixed income securities are also issued by governmental bodies that may have difficulty in making all scheduled interest and principal payments.

The market value of non-investment grade fixed income securities tends to reflect individual corporate or municipal developments to a greater extent than that of higher rated securities which react primarily to fluctuations in the general level of interest rates. As a result, a Fund's ability to achieve its investment objectives may depend to a greater extent on the Investment Adviser's judgment concerning the creditworthiness of issuers than funds which invest in higher-rated securities. Issuers of non-investment grade fixed income securities may not be able to make use of other methods of financing and their ability to service debt obligations may be affected more adversely than issuers of higher-rated securities by economic downturns, specific corporate or financial developments or the issuer's inability to meet specific projected business forecasts. Negative publicity about the junk bond market and investor perceptions regarding lower rated securities, whether or not based on fundamental analysis, may depress the prices for such securities.

A holder's risk of loss from default is significantly greater for non-investment grade fixed income securities than is the case for holders of other debt securities because such non-investment grade fixed income securities are generally unsecured and are often subordinated to the rights of other creditors of the issuers of such securities. Investment by a Fund in defaulted securities poses additional risk of loss should nonpayment of principal and interest continue in respect of such securities. Even if such securities are held to maturity, recovery by a Fund of its initial investment and any anticipated income or appreciation is uncertain.

The secondary market for non-investment grade fixed income securities is concentrated in relatively few market makers and is dominated by institutional investors, including mutual funds, insurance companies and other financial institutions. Accordingly, the secondary market for such securities is not as liquid as, and is more volatile than, the secondary market for higher-rated securities. In addition, market trading volume for high yield fixed income securities is generally lower and the secondary market for such securities could shrink or disappear suddenly and without warning as a result of adverse market or economic conditions, independent of any specific adverse changes in the condition of a particular issuer. The lack of sufficient market liquidity may cause a Fund to incur losses because it will be required to effect sales at a disadvantageous time and then only at a substantial drop in price. These factors may have an adverse effect on the market price and a Fund's ability to dispose of particular portfolio investments. A less liquid secondary market also may make it more difficult for a Fund to obtain precise valuations of the high yield securities in its portfolio.

Credit ratings issued by credit rating agencies are designed to evaluate the safety of principal and interest payments of rated securities. They do not, however, evaluate the market value risk of non-investment grade fixed income securities and, therefore, may not fully reflect the true risks of an investment. In addition, credit rating agencies may or may not make timely changes in a rating to reflect changes in the economy or in the conditions of the issuer that affect the market value of the security. Consequently, credit ratings are used only as a preliminary indicator of investment quality.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated which may affect the market value and liquidity of the security. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Collateralized Loan Obligations. The Fund may invest in collateralized loan obligations ("CLOs"). A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. CLOs may charge management and other administrative fees. The cashflows from the trust are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the "equity" tranche which bears the bulk of defaults from the bonds or loans in the trust and serves to protect the other, more senior tranches from default in all but the most severe circumstances. Because it is partially protected from defaults, a senior tranche from a CLO trust typically has higher ratings and lower yields than its underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, CLO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of protecting tranches, market anticipation of defaults, as well as aversion to CLO securities as a class.

The risks of an investment in a CLO depend largely on the type of the collateral securities and the class of the CLO in which a Fund invests. Normally, CLOs are privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in CLOs may be characterized by a Fund as illiquid investments. However, an active dealer market may exist for CLOs that qualify under the Rule 144A "safe harbor" from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers, and such CLOs may be characterized by a Fund as liquid securities.

Preferred Stock, Warrants and Rights. The Fund may invest in preferred stock, warrants and stock purchase rights ("rights"). Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Short Sales Against-the-Box. The Fund may make short sales against-the-box. A short sale against-the-box means that at all times when a short position is open a Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Equity Investments. After its purchase, a portfolio investment (such as a convertible debt obligation) may convert to an equity security. Alternatively, a Fund may acquire equity securities in connection with a restructuring or other similar event related to one or more of its investments. If this occurs, a Fund may continue to hold the investment (or make additional purchases of that equity investment) if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B

Financial Highlights

The financial highlights tables are intended to help you understand the financial performance of the Fund for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). Because Service and Class R Shares have not commenced operations as of the date of this Prospectus, financial highlights are not available. The information for the Fund (except for information for the period ended September 30, 2025, which is unaudited) has been audited by PricewaterhouseCoopers LLP, whose report, along with the Fund's financial statements, is included in the Fund's Form N-CSR dated March 31, 2025 (available upon request). The Fund's unaudited financial statements for the semiannual period ended September 30, 2025 appear in the Fund's Form N-CSR dated September 30, 2025 (available upon request).

Portfolio turnover rate ^(e)	668%	1,896%	1,369%	1,386%	1,242%	1,027%

(a) Calculated based on the average shares outstanding methodology.

(b) Amount is less than \$0.005 per share.

(c) Assumes investment at the NAV at the beginning of the year, reinvestment of all dividends and distributions, a complete redemption of the investment at the NAV at the end of the year and no sales or redemption charges (if any). Total returns would be reduced if a sales or redemption charge was taken into account. Returns do not reflect the impact of taxes to shareholders relating to Fund distributions or the redemption of Fund shares.

(d) Annualized.

(e) The Fund's portfolio turnover rate is calculated in accordance with regulatory requirements, without regard to transactions involving short term investments and certain derivatives. If such transactions were included, the Fund's portfolio turnover rate may be higher.
